>james,

i went through about 8 to 10 months of back and forth with apple on this. they did replace the cpu, mobo, boot drive twice during this period. the problem was is that they kept giving me the prototype version. while it would benchmark fine once it was put in the real world nothing worked. i could take my drives and install them on other macs and it performed fine. bring theirs into mine and the same no works results ensued. hell. a single 867 notebook could smoke my dual 1.25 running the same data through it. after several months of the back and forth calling i was able to bypass all the lower folk and talk to the tech folk direct. it was shortly after that i was told that once i put anything into the computer ie. ram, drives or programs of any kind that apple could not and would not warranty it working properly. in so far as informing apple of my situation, they knew

that this was a recording studio and my sole livelihood. after that i exploded...(quietly) and hung up.

as far as filing a suit goes i think the only successful suit brought against apple was a class action one a couple of years ago.

thanks

>I remember when you were posting about your troubles. It sucks big time. I hate it when you buy something, and the new and improved model comes out the next week. I've been looking at the new G5's, but sure as shit if I buy one, next week Apple will start shipping the new Intel Macs at 4 GHz or some such. I will admit that Apple has had a less than stellar reputation for taking care of the customer. I would have a bad taste in mouth if I were in your shoes also. Like I say, my system isn't the fastest Mac out there, but it does what I need at the moment and I'm just gonna leave it be. I just bought a Power Book with Tiger installed. Hopefully MOTU will get DP updated soon so I can switch it over and dedicate the old G4 to PARIS only. Until then, it's still dual boot for me.

>Hi Guys & Gals,

How is everyone implementing Serial ATA drives into their multi-card PARIS PC/Mac..

I recently purchased 2-300gig(16meg cache)serial ata drives on my Asus A7n8xE-Deluxe However, on this resides 4 EDS cards..Now, The EDS's are now in a war with the Serial Ata drivers.. Very bad.. Both are fighting over PCI bandwidth..

Any work arounds?? I though about getting into a Magna Chasis to aleviate this problem..Yes/No?? Thanks?Aaron,

I pulled the card and sent it back to the party I bought it from and they are sending me another one to replace it. When the new card arrives I will see if I have the same problem. Will keep ya'll informed when I try to get the system up again.

Thanks for the reply
Keith

This is exactly what I want to do.
Not out of sequence, just more optiions than say a Roxio with 2 second or
3 or whatever they allow so I have an accurate sequencing to give to a mastering
guy to follow..also so we can test drive the sequence for a week or so.

That is great of WL Essentials will do it. The Steinberg guy said no, but
he may have misunderstood me. He siad I needed the full version for that!

So UAD plugs are also ok in WL E?

>>LaMont,

I can't see why there would be more data on the bus than there would be with
IDE. As I understand it's the same protocol etc, so data throughput should
be the same as standard IDE.

Also, depending on your MB chipset, many new chipsets don't shove everything
down the PCI bus, but deal with things straight from the chipset to the SATA
ports. This is obviously ideal as it not only clears up the PCI bus, but
also allows quicker transfer of data to and from the SATA ports because they

don't rely on the limited PCI bandwidth. Indeed, if I'm not mistaken, that MB has a NVidia chipset, and I was under the impression that all the NVidia chipsets did this. This is worth checking as it is possible that your fault is elsewhere.

You're sure it's not an interrupt thing?

Cheers,
Kim.

>Hey Kim..
You're right..it is an iterupt thing with the Nvidia chipset..I ihave re-installed
the XP(Sp1) clean..Still when load in Paris EDS ,it wants to share with the
on-board Serial Ata and the Video Drivers..My Clean OS install (Standard
PC. What gives?

I hear that these new MB with NVIDA chipsets are a pain in !@# to change
or steer interupts.. If that's so..Then I can you aor anyone recommend me
a MB that a user can manaukly steer interupts? This is really getting to
me. As of late, If had to use Nuendo to mix projects on.. it's okay, but

I sure to do mis my Paris Sound.. :) Thanks again Mont

>In this case you may find a solution in a Magma if you care to fork out the
cash. Usually you can find at least one PCI slot which is interrupt clash
free on a MB, and with a Magma that is all you need.

Personally, the MB I have (also NVidia) isn't toooo bad for interrupts, but I believe I would be pushing things to expect to run 4 EDS cards on it. I could probably do it but I'd have to disable some of the onboard hardware, which would not be a problem for a dedicated Paris box I guess. I'm not sure on that though. I'd need to double check the BIOS and see what could be done.

Cheers,
Kim.

>Just noticed accidentally in a search... today marks the 1st anniversary
of the shutdown of Chuck's newserver.

Good to see a year on that things are moving on as usual. Many of the old crew are still around, and my server seems to be happy in it's role and doing the job pretty nicely. All the hardware is handling the load.

In the next couple of months I'll be moving the server to a new home. :o)

Cheers,
Kim.Yes indeed, it is very nice to see that we are keeping it alive, and a very big thanks to you I might add.

Congratulations !,and thank you
for keeping this community together.
This group is unlike most others - I speak
with parasites almost daily and marvel at
the brotherhood of this place. Even when
there is disagreement, differences eventually
get put aside and great ideas (Chuck please pardon the pun)
are exchanged.

Paris en vie long !
Morgan

Perhaps we should make this official Chuck Duffy Day? Where we remember all
Chuck has done for Paris. :o)

Cheers,
Kim.

Dimitrios

At down of this page my Chorus presets.For mono much of variations for el.guitar,
cabs simulators, tremolo ...
Chorus stereo (Aux) with leslie presets.

Best Regards

Zmora
