RichJimmy, something about the source of the wood pulp used in the woofer cone
is no longer available. Here's the full article. The MSP/SW10 series is
supposed to replace them.

http://www.prorec.com/prorec/pressrel.nsf/articles/5EBE27AC8 7BF68F0862569FA0066E408

ANyone heard or talked to him lately...seemshis last post was in mid July

DOnYeah, once you've had a crappy bios you won't do that mistake often.
It's miserable.

don't do a whole lot of that sort of thing here... I may end up
selling or trading these puppies if anyone's interested.

Easy (but expensive) solution would be to pick up a pair of
Earthworks card's, but apart from dropping another ~$1,600, is
there anything you guys are using & like in a lower price range?
Josephson C-42's?
AT-4041 or 4051?
Or????

I'm looking for clean & clear.

NeilNeil,

I've got a matched pair of SE3's on loan here from Morgan. If you would
like, I'll send them down to El Paso and let you give them a test drive. I'm
not tracking anything for a couple of weeks and can spare these, though I
will feel naked and vulnerable without them. These are getting the nod over
my AKG C460B's and my KM 184's on a regular basis for micing guitars. I've
got a pair of Rode NT5's here and we're not even talking same ballpark.
