I remember testing my 442 with Sakis at one point and getting 22 bits =
out of it. I sure thought it was the analog ports that did that - which =
led me to believe 2

Couldn't tell with the top down in the mountains across a PT Cruiser's =
stereo but I'd bet it beats the choices available out in the sticks =
where DeeJ is from :)

I suspect it's more about choices than fidelity. On that note, does any =
FM radio station not compress the living snot (as in smashed audio =
through some rane 'broadcast' compressor set on nuke -it) out of any and =
everything passing audio anyway?
