also reasonably good acoustically. I

added a pair of Jensen line transformers before the NAD (and balanced wiring),
so I can check mixes live through the second system. With a laptop and Timbaktu
Pro, I can add last minute touches to my mixes remotely.

fine.

The idea might work better with a system that was closer to the sound of
my studio mons, but this is an inexpensive approach that you may want to
try, assuming you have access to a decent audio system.

Gene

restart. Follow the instructions for PARIS XP installation exactly. After you reinstall the EDS, XP should find new hardware and install the EDS driver. If this doesn't happen, it is likely that you have a hardware conflict.

Another thing to try is to move the EDS to a different PCI slot as an IRQ conflict may be the issue. If that doesn't work and XP still doesn't detect the EDS, I would swap out the Matrox card for another card (mine's an ATI 9250 8x AGP) to see if that's the source of the problem.

After reading about DeeJ's troubles with Matrox I didn't even consider their products for this machine.

Hope this helps!

Mark

out of the DM-3200 to "C-16 Language" that
PARIS can understand. Sorry, I didn't mean to sound so sarcastic. It's not
possible to control PARIS with anything but the C-16. :>(

outputs of my DAC-1 to a NAD preamp>inputs balanced) >NAD power amp which is
driving a pair of huge ADS 1520's in my living room. It's a good way to
check mixes and masters. I've also got a PC in the living area and I will
likely be trying the Tibuktu or other remote desktop. I like the old NAD
stuff too. It's sufficiently hi-fi without losing the *consumer vibe* so I'm
able to stay in the reality ballpark as far as playback systems go. I also
have an old consumer Sony system in my CR (my version of NS10's with front
firing bass ports) that I A/B with my NHT A-20/B-20's. I'm sure my room has
plenty of anomalies, but I've listened to so much reference material there
that I know it well and I'm happy with the results I can achieve with this
threefold reference monitoring approach.

>Dude, why midi? Go Wifi and do a remote desktop to Paris (I'm making a bit
of an assumption here that the Mac can do a terminal service across WiFi). I
do this regularly on my internet desktop and Inspiron because it's better
for me to stay central. Push the output of Paris to a mini radio transmitter
and you should be good to mix in the car....

Ok, most interesting.

Here is a pic of one of the monitors on a good stand, (Chicago
Speaker Stands, lead shot filled / MoPad) and it's associated 1/3
octave FFT spectrum analysis response. (The subwoofer is off for
both tests)

As you can see, this is very good response in any real-world situation. You have to spend huge sums to beat this response by much.

See the next post for what happens when you put the speaker on a desk.
