Have you heard the TC Konnekt 24D? I'm curious about how you can't route anything on the Focusrite unit -- does it have a mixer/submixer control panel at all? And what about the M-Audio Light Bridge? Does it have routing like the RME Digiface?

Thanks,

Graham

>Hi Fella's,
I've recorded a couple of things with the Profire
Lightbridge and my macbook pro. I did a test recording
@ 24bit/48/khz, 24 track to the internal drive and
it did not hiccup at all for about 30 minutes.
The computer processor allowed me to monitor
with 128 samples latency in real time (no plugins).
I did a live recording of an R&B band off of my Yamaha
O1V96 (17 tracks @ 16bit/44.1khz) for 90 minutes no problem. For safety sake
I set the latency to 500 samples .I'm going to get an Express 34 card and
SATA
drive (7200rpm, 500 gig, 16 mb buffer) and I anticipate
no problem recording 32 tracks @ 24bit/48Khz.
cheers,
Mike

PT MP is hobbled at a max I/O of 18 by Digi, but it is possible to get a

The latency has no effect on this config. Paris is simply sitting there,

of latency is in this loop, it is not affecting my tightest mutes or delaying
any metering to the point that I can perceive it.

My choice for PT for this mix has to do with the complexity of the mix and
the fact that PT has the best options for editing and mix automation (for
me), and it integrates very nicely with my MotorMix.

I have the Oxford plugs running native in PT, so having an unlimited number
of Oxford plugs and Waves SSL plugs gives a lot of options. So far I like
this better than mixing from Logic or DP. The limited number of tracks (48
mono or stereo) and the limited I/O will force me to use other options in

some circumstances, but this setup benefits from many of Pro Tools strengths years.

and Logic mess with the input timing just the way PT seems to do. I think

Gene

this.

I am trying to work a trade with Morgan on one right now.

I saw the ad for the 8pre on MIX Magazine.

Looks great for my needs.

The 8 ADAT lightpipe outs should interface

with the PARIS ADAT card correct?

I am just looking for more mic pres for drumset micing, etc..

chrisl@adkproaudio.coml, for one, welcome our ubergeek overlords. But as a member of the ubergeek overlords, you're overthinking this one.

Your OSX dock objections seem trivial given that your main hangup is something you could turn off easily.

"Learning" the dock takes about five seconds. I'll sign you up for classes if you like, they're on Tuesday from 1pm to 1:00:05pm... ;^)

BTW, from my experience on development projects, ubergeeks are very likely not the best UI designers for geek-challenged folks.

Which is not to say Apple's designers always do the right thing or that there aren't other ways to design a useful dock.

Cheers,

-Jamie

Yeah!

Now they just need to make the tops of those racks acoustically diffusive or transparent, and you could almost do some work in there.

I have some wav files that were recorded in Live 5. I can't, however, load
them into Paris. Well, it loads them, but only as files that are 2k big.
The original files are on the order of tens of megabytes. And, does anyone
know where I can find AudioX's "Auto Add" program? I can't locate audiox
anywhere on the net.
Thanks
MR

Yep, although OS snobs like us would find reasons to prefer one over another. And I have a variety of reasons to prefer OSX at this time.

> People talk about whether there will be a 'Google platform' some day. There

If you took away OSX or WiXP it would screw up a lot of people, too. But point taken about the growing importance of certain web sites.

OTOH, I like the concept of having local data rather than throwing my data out onto a network.

my 22"

widescreen Viewsonic monitors, they came with a CD that had 'drivers' and a PDF manual on it. When I 'installed' the drivers, all that happened was the copying of an .inf file to my Windows installer directory (This was under XP, mind you...) which apparently had the supported resolution info in it for Windows to digest. After a reboot, I went to Display Settings, and the PC had recognised the monitor(s), and the 1680x1050@60 option was the first selection on the dropdown list. Wham, bam, thank you ma'am...

I have an AGP Matrox P650 video card, running the latest Matrox driver, without triple-head, .net, or the Matrox Powerdesk app running, but I don't know whether that makes any difference. Did your monitors come with any software? This is all I can think of - I know John B. previously had issues with a 1440x900 19" widescreen that he couldn't get to work, also.

Sorry you are having trouble - I love my widescreen displays.

Larry Upton

This is the only test that I have had the time to check.
Snare on track one.

ADAT loop out and back.
Record snare on track two.
Track two is recorded 134 samples BEFORE track one?
Changing PT Hardware Buffer size had no effect.

Pro Tools M-Powered 7.3
ProFire Lightbridge V1.8.1-3

Genel currently have 2 EDS, someone just traded me an MEC and EDS and a C16 for some work..Well, there was more to the trade no matter.

What Do I need to hook it all up..I have a LA Audio WC generator..does the 3rd EDS have to be hooked to an interface at all I assume it does. do need the little ribbon cable..any place sell em?

Also, I remember this EDS card may have issues..is there a danger in putting it in if it is a bad card or will it just not work?

Thanks all

CYou just need the same little cables that your other 2 cards have. I don't believe you need an interface hooked up, as long as the card with no interface is not tagged as your primary card within Paris. I believe it can get word clock passed to it internally from one of the other cards, and that is what one of the cables is for. Someone correct this if I am wrong, please..

****Make sure your power supply is up to the task.****

Can't answer the bad card question.....

>Hi James,

The focusrite sounds pretty darn good. Sadly the Presonus sounds
so-so.The headphone out on the Presonus sounds awful. Not sure if I
would trust anything from the curretn Aleisis. I haven't had any
customers have good luck with any of their compter recording stuff so far.
The Presonus has some MOTU/RME style routing but it is so limited that I

don't think they should have bothered. The Focusrite doesn't have any routing.
The Focusrite will actually buss power (don't know how they managed that).

>Hey Jamie,

I appreciated reading both your comments and TCB's. A couple of things came to mind. I too struggle with local versus network based data. I think it's important to "have" systems that allow for both. To the second thought, I find it kind of weird that so many users (me too) buy into the latest and greatest. Especially when so many of the most common computer based tasks can still be accomplished on pre 21st century soft and hard ware. I'm not trying in the slightest to dis any particular product or approach, and Lord knows (though I doubt He cares) I DO run and enjoy some 2000-plus tech, but I got 13 years of productive music making out of my Atari running at what was it ... 8mhz. Still kicks my butt when I think about it.

Ok, Just because you don't know how to use the Dock, doesn't make the Dock stupid! Go to the top left hand corner and click on the apple icon. The fifth item down is the dock, turn magnification off. You will also find all of the Dock Preferences there.

Have too many short cut icons in the dock and want a short cut icon off the dock, drag it off the dock, release and it's gone. Or you can highlight an item in the dock, right mouse click, go "remove", and it's gone. Want to add a short cut to the dock, drag an icon on to the dock, it adds it.

That's just one of many ways to do it. You want the dock out of the way, go apple icon, Dock, go "Hide Dock". Want the Dock to appear again, put your curser in the area where the Dock would be and it reappears. You can set the timing on this in the preferences for how fast you want it back.

Move you curser off the Dock area, it disappears again. Or you can set up hot corners, where you can place the curser for a second or tw

Once again, I don't think you know how to use the Mac file browser correctly,
because you are so use to using the suck ass windows file browser that you
don't get it. I'll just say that the Mac file browser sucks so bad that
MS copied it for Windows Vista!

A remote is just a nice feature to have for a multimedia system. It's the
wow, James Bond factor, and it also enhances the overall users experience.

Some of the pioneering technologies came from Apple and the mac community.
Programs like Sherlock and Watson helped shape what is available today with
their concepts.

As far as the college student, I could tell you some personal stories, but
I'll save that, and just say that I know personally that a Mac can take a
college student places;)

What do you think of PT with it? Can you get 32 track of I/O in PT at 44.1, 48K? It was unclear if it is stuck at 18 I/Os with PT at 44.1/48.

Thanks

130 tracks playback using my FirmTek RAID and Logic.
The LightBridge seems to work well with the FirmTek.
This is truly a studio under your arm.
I posted some results here:
<http://www.gearslutz.com/board/showthread.php?t=80869>
geneHey guys! Thanks for the info. Maybe DeeJ could pipe in with some test ideas for the round trip thing.

Gene, are you sub mixing the PT 48 track down to 18 outs? At least there are other software options for 32x34 I/Os.

Thanks again.

James

>GeneHey Jamie
I've been running Logic on an old (1998 I think) Mac clone. Recently a
friend gave me a good deal on a G4 which I've been running Cubase on.
Generally I record and mix on Paris in a PC. My Cubase projects have been

really teeny to date, but I tried to get 16 tracks up last night -just audio, no effects -and it was starting to crackle. I'd love to be able to run a dual G5. I imagine I could get pretty much all my tracks going on a larger faster machine -synths, FX, tracks. I figure I'm gonna stick with my setup for another year or two and then sink some cash into something that will allow me to get it all done ITB, Being spread out over several computers I can only glimpse how efficient the creative process will be for me. Sounds like it's been a real boost for you. I can't wait.

Cheers,
MR

Awesome. It's funny that it takes a little share guy to manage to come
out with a potentially useful CD/editing mastering program. And nice
and cheap to boot. It looks like some old win98se share stuff though:).
For \$80.00 who cares lol. If this thing works well he's gonna have a hit.

s like you have a serious out-of-studio setup there.

>

>Neil

>

Running my MacBook Pro to see how far I could push it was primarily academic. For my own production work 48 is typical with occasional songs going into the 80-90-track range.

I have started many tracks in commercial studios over the years, and still do. With this setup I can bring my laptop with reference tracks and click tracks already prepped and just plug into the house converters and go. At end of session unplug and leave.

the power is important. If I am working on a song with 50 tracks and I want to add a VSTI part or two, previous generations of laptops would fail. On a recent session I was re-arranging the song on my laptop while the first passes of the recording were starting. I had a new version of the song ready with both tracks and sheet music to pass to the studios Pro Tools HD rig and musicians in just a few minutes.

Logic Node, a rack of soft synths, or 20 convolution reverbs.

GeneWhenever you decide to upgrade, you'll be amazed. For example, any of the current core 2 duo Intel Macs should be faster than what I use. And the dual G5 I use is already fast enough to handle all the tracks, FX and soft synths I've thrown at it.

The next jump is likely to be an 8 core Intel system. Apple's version could be officially announced as early as next month. Should be able to handle all your tracks/FX/synths, cook dinner, mow the lawn, cure cancer, fix that leaky faucet, remodel the attic, beat you at chess and come up with a unified field theory all at the same time...

Cheers,
-Jamie

I've been using) and now

I have all these plugins

at Paris boot that can't be found, most of which are ones I don't have authorizations for but not all. I never had to click

those away before.

After switching the clock back to 44.1 I tried other projects at 44.1 but they also didn't play

right latency wise. I also lost all my presets once I'm using the plugins.

This is

across the board.

I rescanned them 3 times with FXpansion 3.3 but no help.

I check no VST prefix, rescan failed plugs,

rescan existing plugs and

I uncheck the DX question on the second page. I directed FXpansion to the single folder that has all my VSTs.

Any suggestions?

Thanks because I am really confused now.

Tom

>diffusive or transparent, and you could almost do some work in

>there.Hi Graham,

I used to have the typical big KK audio console with the monitors on it. I could not get good results with it, so I pulled out the analyzer and took a hard look at it. The top of the console was extending the baffle of the speaker and causing comb filters and low-mid boost, while the racks on either side were causing the sub to produce standing waves and more comb filters. It was just awful.

I can't find the pics right now, but I ended up with a patio table (with lots space between the boards of the top) from Ikea for the KB, C16's and computer monitor, the racks pushed off to the side and angled away so as to not reflect sound from the monitors, and the speakers on solid steel (filled with lead shot) stands with cement blocks on top and then Auralex MoPads on top of that.

It was a pretty low-buck solution and both measures and sounds wonderful. It is so accurate now, and translates so well, that I am even confident mastering on it.

BTW, there are speakers now, from Tannoy and JBL (and probably others) that can correct for the baffle extension. What they cannot correct is the reflection and delays, not the standing waves from the subs.

10 audio tracks in a folder, record enable all 10,
Link all 10 and then try to record. Only the first one in the link records.
Other have confirmed this behaviour too. Also if I just link channels 9
and 10 1 through 8 record, 9 records but 10 does not. It's like only the
first channel in the linked channels record.

>

I have sends from kick, snare and hihat audio tracks going to Stereo Group
Channel 1 all prefader with "Link Send Routing Panners to Channel panner"
enabled on each channel. I am doing Prefader intentionally.

The kick is panned hard left and comes through the group channel hard left
even with kick fader pulled down (prefader passes it), but snare is hard
right and it's coming through in the center on the group channel.

If I open Send Routing I can drag the pan around there and it moves the track
in the group but shouldn't the "Link Send Routing Panners to Channel panner"
do this automatically?

It was some one else that thought they were different...I said they were the same.

>Have you been using 4.4 or 4.5 with all the same settings?

I'm using 4.5 with the same settings.

>Maybe because the presets are gone Sampleslide is not set correctly?

This would be my guess.

>Can you enlighten me on exactly the right method with the the wrapper? =20

1.Remove UAD using control Panel (may not have to do this)

2.Install new UAD software

3.Go to My computer/hardware device manager/DSP accelerators and very drivers are updated for

each card (they usually aren't) uninstall drivers and re-install new version drivers

4.Restart

5. If you didn't already load new drivers, windows will prompt you at this time. If you want to

do the automatic add thing...make sure you have all previous UAD versions deleted off your C

drive or it will just re-load old drivers.

6.Authorize any new plugs

7.Open FXpansion

8.Remove powered plugins folder (assuming this is where the UAD stuff is),don't close or click

OK at this time.

re-add powered, don't add vst suffix, disable midi, DO NOT CHECK THE RESCAN PLUGS OR FORCE

RESCAN FAILED PLUGS BOX (this is a sure fire way to loose presets) that's it

Note.....starting with 4.5 you will get (I do anyway, in Paris)an error that says the Farichild

mono and EX M plug is not installed. To defeat this, install 4.5 again, specifying a folder

other than the correct folder (you will delete it later) and select the "install mono versions"

box. Go into the mono folder that's in the folder you chose, copy the Fairchild and EX-M DLL's

(there the only ones that don't have the word (mono) in parenthesis) and copy them to the

correct folder. Then delete the bogus folder, or the UAD dll's. I use the steinberg/vst folder,

since that's what it defaults to, and that's not what I use normally. You don't have to do

this, but if the error messages bug you (they do me) you can. The mono versions don't work

correctly in Paris, but it keeps the error screen from popping up.

>Also where are they exactly so I can copy them from C drive 1 to 2?

If your reffering to where the presets are actually stored...I don't know...I've tried to find it and I can't. Somewhere in the registry. I emailed Angus at fxpansion and that's all I got out of him. Maybe someone smarter than me can figure that out.

I know it's NOT in the Paris fx file.

If you've already lost the presets...I don't know of anyway to get them back, unless you have a ghost image of your C drive.

Also the UAD plugs get told what sample rate to operate at when they're iniated in the ppj vst slot. Soooo, if you reset the clock back to 44.1 from 48, you need to get rid of the UAD plugs and re-introduce them so they know what sample rate to work at.

Also...when you say you reset the hardware clock...are you talking about an external clock??? If so you also need to set Paris at the proper clock rate to match the external clock.

In other words, if you have the external clock set to 44.1, but have the Paris project window set to 48k, even though it will run at 44.1, the UAD plugs will think it's at 48k and things will get ALL JACKED UP. (been there, don that)

Is that what happened???

Good luck...I'm afraid you may be SOL in getting your presets back. Let me know how its going.

RodI've been pretty lucky, but I've finally had an encounter with a project glitch. I've got a Paris song project that, while working on it became very sluggish and upon crashing down corrupted the files in the folder. I was actually rendering all new tracks at the time for a backup. So, basically, I've got the folder name, which looks good, but the two sub-folders inside it (which contain all the PAF audio files) have funny looking random caps, and Windows ME won't let me access them. Anyone else run into this before? I'm pretty sure that my hard drive bay cable was just loosing a connection that caused some disk-writing errors - the hard drive is fine now, except that folder.

Anyone ever recovered PAF's before?

TIA,

-Carlstupid [?st(y)o?pid] adjective (-pider, -pidest) lacking intelligence or common sense.

I could=20
 have sworn we had this conversation a month ago and with UAD =
=3D
>version=20
 4.4
>my latency changed and you agreed. At that time, I =
went back=20
 to 4.3 and
=3D
>all was better.

It was some one =
else that=20

thought they were different...I said they were
the =
same.

>Have=20
you been using 4.4 or 4.5 with all the same settings?

I'm using =
4.5=20
with the same settings.

>Maybe because the presets are gone=20
Sampleslide is not set correctly?

This would be my=20
guess.

>Can you enlighten me on exactly the right method =
with the=20
the wrapper? =3D20

1.Remove UAD using control Panel (may not =
have to do=20
this)
2.Install new UAD software
3.Go to My computer/hardware =
device=20
manager/DSP accelerators and very drivers
are upda
