he

Paris Fire Station. I believe now, like many things he told me, it was just lies to keep me pacified, until they could sell off all their inventory of Paris hardware.

I find it kind of funny that Malcolm Toft joined Ted Fletchers company after that and EMU OEMed their mic pres for the new EMU hardware. I want to think I made that connection.

If you really want this product, you can make it happen by calling manufactures and telling them what you want, just pick wisely! If you get enough people to call over time things will happen. The price is another story.

Many years ago, I told the drum hardware designer at Alesis, that I wanted a drum module with dry drum sounds so I could effect them the way I wanted in the studio. I also told them that I wanted a built in effect processor for live use and studio work. I also wanted more triggers, more outputs, headphone output with volume knob, and a audio in put so I could practice to music. To my surprise, they built it in the DM PRO drum module.

I made many suggestions to Greg Mackie that became products. Only problem was, the ideas were bastardize, sliced and diced in to multiple products and they charged three to four times more than I suggested for each product.

These companies want to slice and dice every thing and make big bucks. If you want it all it's an expensive add on. I've talked to many of them as a dealer, they think they can make more money selling little recording boxes to bedroom guitar players or DJs. They think and their marketing data

shows that they can make more money selling the little boxes than big DAWs.

The attitude is, if you want to play in the big time, you'll go with PT, SX, or Nuendo with third party hardware. Nobody really wants to go up against PT because it's already established in the market.

The other issue is hardware becoming obsolete too quickly. Building DSPs in to a system is a bit of a risk. They think native systems are good enough, and that is what most people want, and if they need more, like systems with DSPs, that PT already fills that Pro end of the market.

However if enough people talk to these companies, something will happen.

That's my 0.02

hat there wasn't enough room in the d8b to add drives, so I made the mistake of saying, make it rack mounted, some thing like the Magma expansion chassis. He said that the rack mounted DAW idea was interesting to him. They put out the MDM later for about 6K, as aposed to building it in and keeping the projected price of the d8b, which was my suggestion. I also suggested making a rack mount that you could put more FX cards in, give you more I/O, and external hard drives and a CD burner. I suggested the CD burner with mastering/authoring software. When I suggested a SCSI port or a FireWire port, he thought I was crazy. I thought adding a PCI SCSI card and having a port on the back of the d8b made a lot of sence. FW hadn't made it's way in to audio products at that time. I made other suggestions they used over the years.

25 min 10 min prep

* Main Ingredients

1 tablespoon oil

4 chicken breasts

3 green onions

1/4 cup minced water chestnuts

1/4 cup sliced almonds

4-6 lettuce leaves

sometimes add some bean sprouts and grated carrots

(Bean Threads * A form of translucent Chinese noodle. * These are not true noodles, but are made from the starch of mung beans. * Also called "cellophane noodles.")

* Stir Fry Sauce

1/4 cup water
1 teaspoon cornstarch
1/3 cup soy sauce
1/4 cup sugar
1/4 cup vinegar
1 tablespoon oil
2 teaspoons sesame seeds
1 teaspoon red pepper flakes
1 teaspoon chili oil
1/2 teaspoon minced ginger

1. Stirfry sauce: combine water and cornstarch and stir until cornstarch is dissolved.
2. Add this to the other stir fry sauce ingredients in a small saucepan over medium heat.
3. Bring to boil, then reduce heat and simmer till thick.
4. Sesame ginger dipping sauce: combine water and cornstarch in and mix until cornstarch is dissolved.
5. Combine this solution with the other dipping sauce ingredients in small pan over medium heat.
6. Bring to boil, then reduce heat and simmer for 2 minutes.
7. Peanut dipping sauce: combine ingredients in a pan over medium low heat.
8. Heat while whisking until sauce becomes smooth.
9. Remove from heat when done.
10. Heat 1 Tbsp of oil in a large skillet over medium heat.
11. C

I think it was a custom Helios midas, thus the Paris gold GUI. I think DeeJ can tell you exactly what it was.

Hey LaMont, speaking of crazy old consoles, check out this thread about Flickinger consoles. Read what Steve Albini has to say about them. We have a studio with one of these about thirty five minutes away from us. Might be interesting to cut some stuff on it. It might be a great choice to model for our new super Paris system, coming out SOON! :)

Note that mytek as outputs clock only same as with its bnc out.

Thanks

Regards,

DimitriosSeveral years ago, we had the developers of what was to become Radar in the studio here. They were asking about features we would like to see etc. We got talking and discovered that one of the guys was living in the house my parents built and I lived in as a kid in Vancouver. Pretty wild indeed!

David.

not dealer of Behringer in my city now.
I still asked because lost =
130 Eur=20
is not nice too
I want reverb unit with diffrent sound but quality =
similar=20
to Paris EDS.Particulary
interesting in big long tail verb but =
brighter.I=20
dont like TC, I tryed all
units (colegue is dealer of TC).I don't =
like TC=20
pieces at all, sorry...
Not money for=20
AMS...

e. He was once a Fed. judge in Florida who was impeached by a then Democratic (!) Congress in the 80's for leaking secrets about a Fed. trial involving a big-time drug ring and accepting a \$150,000 bribe. He is one of a very few federal judges ever to be removed from office. Is Pelosi going to drain the swamp only to repopulate it with *convicted* vermin?

I think the good thing about this is that they are now going to be in a "put up or shut up" situation and there is at least the possibility that they will be called on their whining by the independent voters who put them over the top.

If they are truly as clueless as they appear to be and if they do things like appoint Hastings, start wrecking the economy (a la Rangel), try for a presidential impeachment and cut funding for Iraq, it will be quickly obvious that they are the same old tired socialist flotsam that we swept out in the 90's and they will be tossed out on their respective arsses in two years rather than 4 years (as would happen if they won the presidency in 2008). This may be the best of two evils as far as conservatives are concerned.

I'll hold my breath for a little while and give them the benefit of the doubt. They haven't had one constructive (realistic) idea as of yet but they keep hinting around that they do. It's now time to see if it's all hat, no cowboy and it seems that now, when they are questioned about what they're gonna do, they can't scoot backwards on their asses fast enough now that they will be expected to come up with *the plan* that they never had.
;o)
