outstanding. For example, the Optimizer mastering limiter was the best I
had heard in a plug until the UAD limiter, which does beat it.

For some reason they never added anything or changed their interface for
the past several years. They are DX plugs.

ment of their tablet.

One thing is for sure, if Apple releases a tablet, they will act like it's something brand new as if they invented, and tell you it's the coolest thing since sliced bread;)

>It's the only way I work now. As I posted in the past, my physical machine

has absolutely nothing installed on it. I install and run everything in a series of VMs. There are a couple of options for XP.

1. Microsoft Virtual PC 2007. Free download. Highly optimized for windows. Tight integration with physical PC (file copy, drag and drop, cut and paste, display resolutions).
2. Virtual Box. Open Source. Free download. Cool.
3. VMWare. Cost\$. Probably the best there is, if only because of the expansive feature set.

There's nothing inherently dangerous about a VM, and I run a bunch of linux distros just fine. In fact, the physical machine is 100% isolated from anything the VM may do.

So all 442s are the same then???

This one's from Australlia.

does this mean you have rendered all copy protection schemes irrelevant?
How do dongles work into this?
