king one or two drinks of alcohol makes me sleepy really quick
and hard to get up the next day. So, it's tropicana orange juice and
aquafina running this powerplant. hehe

I do think coffee smells great !

I don't own an IUD, but it seems that Waves plugins in conjunction
with PSP, (VintageWarmer... which I like a lot), or Amplitude
can cause the dropouts.
Usually flushing the memory (by way of saving and reboot), fixes it.
I have started rendering tracks with lots of edits to avoid this.
(minus plugins so I can tweak as I build the mix.)
I'm thinking that this problem is more related to screwy memory allocation
as one builds a complex mix, (and applies more plugins), and is probably
responsible
for the persistence of the occasional Crash-on-exit, and unhandled
exception, rather than the IUD plugins themselves.
Having said that, I reiterate that I don't own one, so WTF do I know?? I'm
just relating that I have had the exact same symptoms.
Oh, and I'm using a NF3 K8NS-ULTRA 939.

Kim. (Double-yuu, that is...)
