Well the fundamental of the low E on a bass is 41 Hz, and
guitar it's, of course, twice that, so you don't want to
completely lop off any higher than those levels, but you can
certainly approach those, depending on the song & style. Lots
of rock guitar tracks have plenty of energy below 100hz, but
below 80 is where it starts to gradually turn into more & more
muck. You get some of these modern rocker guys who tune down a
step or use drop-D tuning, and your low string is now something
like 72-73 hz, you wanna lop everything below 100 off of that?
If you're talking about lead tracks - solos where they
don't go down into that range, then yeah you could Lo-pass at a
much higher level if you wanted to, & not hurt anything (as long
as you're not using too gentle of a slope & start cutting off
more than you intend to).

Neill don't have one to sell but just ran across this one on ebay:
http://cgi.ebay.com/Ensoniq-Paris-Control-16-Console_W0QQite mZ7343172860

>I have way too many things to tweak already. Thank God for convolution
reverbs. I have the GigaStudio on an adjacent computer and use the
GigaPulse reverb as an external unit to put live tracks in a space (mostly
brass, strings, chorale & percussion) and it really does put them into a
soundstage that can't be acheived by sending a signal down an effect bus and
mixing it back in. The tracks need to be bounced back to Paris (stereo) and
time compensated, but with my set up it's fairly routine.

He did a great job on LS drums for Giga.

drums. Lots of power in GS3.

GeneSummer is over here. It's been raining every day for about 10 days and fall
is in the air big time. It was actually a bit nippy today until late
afternoon and right now it's probably close to 40 degrees F.

I'm getting ready to turn on the friggin heater.....in August. Seems like
a strange thing to do but if I don't Crashbasket and Juliet will jump up on

the bed and lay down on top of me while I'm asleep so they can get warm while I die of suffocation.

;oPnice catch, mine's already on order.

We're still holding above 80 almost every day, in fact August has been the hottest month of the summer... although I have started to see frost type moisture on the cars in the morning.

Damn, the summer is seriously over though... another summer gone!

We'll probably get about a 3 week fall, then its 5 months of snow....

Tony,
You probably payed the \$100+ too?
Tom

"Tony Benson" <tony@standinghampton.com> wrote in
message news:4303738b\$1@linux...

Ok, I went to their site, and it says registered users can download
anything
from the sample area. That's what I must have done, because I ended up
with
gobs of samples already in the GOG format.

Tony

"Tom Bruhl" <arpeggio@comcast.net> wrote in message news:43036786@linux...
Tony,
You got sounds? Mine had two snares and two kicks I think.
I'll look again.
Tom

"Tony Benson" <tony@standinghampton.com> wrote in
message news:43036520@linux...

Yes, it does come with it's own sounds and they're pretty good. It's
also

pretty easy to import your own sounds. I've imported several of my dfh Superior sounds. I've been running the AU version of 4.02 on my Mac with DP 4.52 for several weeks and it works well. I haven't tried it with PARIS yet.

Tony

device and to a PA at the same time?

I guess potentially I could just use DI boxes with an in and an out, and
feed balanced signals to the recorder...?

What's the best way to look at doing this? Feeding the channels from a desk
insert isn't likely to be an option as most of these channels will be mixed
prior to getting to the main desk.

And what's an excellent, top quality, 16 track portable digital recorder
for under \$100? ;oP

Cheers,
Kim.If you have a pretty decent FOH console you should be able to take the
channel direct outs (already preamped) straight into Paris or recorder. I
use Paris to record at our church occasionally and I set it up next to the
mixer and take the direct outs off the mixer.
Works great.

>
> Cheers,
> Kim.Nah, it's all a little more complex than that and I really need to take the
signals from before the desk. The desk will only get a single input.

I'm planning on doing some solo shows involving a looping pedal, a few instruments, various effects, and some audio routers which route things from one place to another. Hence I'll have 3 keyboards, a guitar, a vocal, and a theramin, three seperate effects loops, plus the looper...

....and the setup will only send a single stereo output of all this stuff to the PA... hence if I tap the recording from the PA all I will get is the final stereo mix. I'd like to be able to break down the individual instrument tracks for later mixing.

I'm hoping to be able to tap in to audio at various points in the system so I can get seperate tracks. The loops, for example, will likely be mono, and 16 bit, so I'm thinking I may want to, after the fact, actually recreate the loops in Paris so that they're stereo and 20 or 24 bit resolution. Use the original performances, and create them to sound identical to what actually happened, but in better quality than what was heard on the night, if you follow.

Does that make any sense?

In any case the PA will only be getting a single mix of the whole performance, and I want to break it down further than that. I'm trying to work out a good way to do it...

....it's going to be a mess whatever I do... ;o)

Cheers,
Kim.

It's all that global warming stuff causing these low
temperatures.

:D
(bracing for shitstorm)I'm thinking of picking up a Roland VS-880EX or something.

Surely by now though somebody has a simpler box. I mean lets face it, all
the average user needs is a little box with a HDD and some A/D convertors...
and something that allows to two to talk. Those roland boxes with built
in mixers and the like, while they're great if you want all that, are really
overkill for many, who like me, probably just want to turn audio in to wav
files and worry about effects and mixing later on a computer DAW.

I figure I need a minimum of 8 tracks, probably preferably more like 16,
but cost is a factor...

Cheers,

Couple of used ADAT's ganged together? Akai DR-16?

NeilThis is a multi-part message in MIME format.

Tony,

I found those free samples and will be checking them out soon.

Thanks for the tip.

John,

I don't know if it supports ME but I doubt it.

I didn't see it mentioned anywhere on the
website.

-----=_NextPart_000_002A_01C5A37E.1DB22C70--Looks like I've got one of those *sweatin the details* producers on my hands. I'm going to have to get my head around a lot more stuff than I thought. He's bringing three more projects over here PDQ and we've been sitting around talking about all sorts of extremely anal ear candy kinda stuff that he expects to be able to do. It's do'able, it's just a lot to learn. He's worked a lot in Nashville with some major heavy hitters so I'll get an education. Glad he's a nice guy. I'll probably be learning a lot from him.

Working on two DAWs simultaneously is getting faster every day. There's a lot to learn, but the available options for doing different things is mind boggling. I've given myself a pretty major crash course in Cubase SX, at least in regard to the things I need to do with it for mixing.

I also found out a few quirks of the Houston control surface.....like when you hit the write automation button, *everything* gets automated if you're not careful, including the mutes and EQ, so if you're writing automation and doing some EQ'ing on the fly and muting/unmuting tracks as you go, you're writing all of this to the project and it will be read during playback along with the 4 fader moves. I just had to fix three songs (basically a remix) because all this squirrely **** crap was going on and I couldn't figure it out until I opened up all of the automation windows and saw this major mess happening.

Lots ot learn.

;o)

Wizoo has many demos to listen to at:

<http://tinyurl.com/7ju5d>

GeneYes, it is going to be a mess my friend. You might want to seriously look at carrying a rack mounted monitor mixer... depending on your cash it could range from a Peavey to a Crest. Basically, prewire it, send it wherever you need it and have a jumper snake you'll pull out of the roll around with a snake box/fan to feed the house console.

gotta get put out. However, my model includes the adat HD recorder. Hot swap
drives and ease of use/reliability is high on a deal like that, but the
convertors really don't suck like the old adat tape based machines. And, the
nice thing is.. get a firewire expansion and you can zip that stuff right to
your multitrack of choice OR use the adat pipes and hit DAW of choice.

it though
if you drop me an e-mail. I'll also send a copy to Mike Audet as he's got
some webspace for this purpose.

Most of these have been compiled from other users or the newsgroup or the
FX preset updates. There are settings for the Comp, NoLimit, Plate and Room
Reverbs, Chorus, and Tap Delay.

If anyone has any to add, let us all know. You might also want to contact
Mike Audet (mike@mikeFSPAM!audet.com) and myself, as Mike has some webspace
(www.mikeaudet.com/paris) set up for Paris FX Presets.

Enjoy.

Dan B / dbp.s.

Note that: The TubeWarmer comp preset is just the active gain element. The PCM 60 reverb preset requires the BarbQ or FreakQ plug-in as well (search the newsgroup). The UAD 1172LN vocal preset requires about 14db of gain reduction.

Cheers,

db

- Just to reiterate, I don't think there's anything/much new here, but it should be a useful compilation.

- The actual file size is nearer 2.4 meg.

- John- I'm not having any joy replying to your e-mail address.

- Mike Audet is posting it up on his webspace fairly soon.

Best wishes,

db

>Hi guys,

Thanks for the suggestions. Just to let you know ...
I've ditched the Oasys (it was disabled anyway in the device manager... but
still), and moved both cards to different slots. I've also removed some redundant

- the stability with a one card system (and reduced XP boot up times of around
8 minutes to less than 1 minute), so clearly something dodgy was going on
(IRQs?).

The FXs subsystem is (was) installed (as per XP install instructions).

Fingers crossed, the presets are now saving. At least, they do when between

>Hi! I am using Paris 3.0 on a Windows XP with RAID (mirror) system. The mirror array had a problem recently (went out of sync for some reason) and I had to rebuild the array (nothing lost, both disks were ok and had the data; I just used one of them as source and formatted/mirrored the other. So the mirror is back running and all other applications seem to work (Wavelab, etc). When I try to open Paris it never comes up, it doesn't even initialize the MEC (I don't see the LEDs blinking), and the computer freezes.

I tried uninstalling/reinstalling a couple of times, still the same. I formatted and reinstalled Windows, installed the Scherzo driver, the Interloc driver, then Paris 3...and still the same problem.

I have no idea what could be causing this. Everything installed without errors and device manager sees the Scherzo as a working device. Could this be a MEC issue? Please help...I'm about to finish a big project but I'm really stuck here!!! Thanks...I had a similar problem a while back and it turned out to be a motherboard problem that involved rebuilding the entire computer. Why Paris was the first program to not load I don't know because other programs continued to operate but soon afterward Windows would not even boot. This may not be the same problem, I was running ME at the time, but it is a similar symptom.

TC out via a

USB 2X2 into a Motu MTP A/V with a parallel interface on the Cubase
computer. It locks within a couple hundred milliseconds and does not drift.

The only thing to watch for is occasionally (not often) Cubase goes into 25
fps which causes obvious drift. I then go to the project settings and
select 25 fps which for some reason sets it back to 30 fps. Go figure.

I would probably use the channel inserts to run through an analog compressor if you have one with a sidechain.

> We're in PA tonight -- going to see Fallingwater in the morning.

Sheri noticed that Gordon Lightfoot was playing an outdoor venue about 20min from where we're staying tonight, so we got tix online yesterday and drove out there. It's a festival stage set up at the bottom of a ski run at the Seven Springs ski resort -- beautiful scenery way up in the mountains.

Now, you have to have a little backstory. In her lifetime, Sheri has

attempted to see GL 4 times previous. Every time, she buys a ticket, and something happens that the show is cancelled.

She figured this time, we'd be tucked up in the mountains and God might forget all about it.

Wrong.

God noticed that Sheri was trying to sneak into a GL show, and sent a pounding thunderstorm that had been terrorizing Pittsburgh down our way. After sitting in our car in the parking lot for 40 minutes in blinding rain, with lightning flashing all around, they finally decided that it wasn't going to blow over and called the gig.

Moral of the story? 1) Gordon Lightfoot doesn't really exist. 2) Don't try to sneak anything past God, since He's pretty good about that kind of stuff.

Hopefully He'll leave us alone on Monday for Meat Loaf at Wolf Trap...

pab

"Enjoy every sandwich." -- Warren Zevon

"Here at Microsoft, Quality is job, oh, I dunno, maybe 7 or 8?" what version of cubase are you using? You should have no problem getting sample accurate sync...especially with the 9652

I get sample accurate sync with Paris and cubase with a frontier Dakota card, although I'm under the impression that with cubase sx 3 the RME 9652 is needed.

setting to 25 fps in order to get 30... Very Cubase-y, that.
Definitely a little Lewis Carroll in those Steinberg guys.

back to work -- Chas

maybe this is my trouble?

Would be just like the Steinberg guys -- updating their software while obsoleting my hardware...

Would be cool to have this confirmed, if possible -- and thanks --
Chas.

Anyone knows what mostly gets them unrecogisable ?
Windows cannot see it at all.
Can this be fixed ?
Does anyone have any schematics , because to take it to my technician there
isn't much he can do without schematics.
Regards,
Dimitriosmaybe she should really try sneaking in to see GL. you on the other
hand buy 2 tickets just in case and listen to a police scanner.

Have you tried slaving Paris to the other machine? When I was using Logic for MIDI, together with Paris, I tried using Paris as the master & it never locked right - using Logic as the master fixed it no problemo. Now that was on the same machine, true, but you might investigate that option... couldn't hurt.

Also, are there updated drivers available for your RME card? You might check into that... maybe the Swineberg site has a section where you can download that stuff. Here's their FTP link - they have like a bazillion things on there, so it might be worth browsing through:

<ftp://ftp.steinberg.net/>

Neilthesoniq can fix it. I'm not sure if it's thesoniq.net or .com....

I wonder though if it is worth it , the expenses of shipping back and for plus labour expense plus the possibility of non repairing it.
I would appreciate anyone sharing a schematics to have it fixed here.
Thanks

Regards,
Dimitrios

If it's one of the EDS chips that have blown, which is possible- they get really hot, it can't be fixed. At 250 to buy one from East Coast Music Mall, I think a new one is probably the way to go.

But, I'd see if The or Emu would share the schematics with you.

Good luck!

Mike

Dan,

It sounds like the saves aren't going to the right folder/file.?

Do you see "PARIS_Fx.var" in your C:\Program Files\EMU\Paris folder? =20
Do you also see a file named "PARIS_Fx.var (default)" ? These
are both in my Paris folder. I believe the first is the file that
holds all your home grown presets (Paris and VST/DX) along=20
with the stock ones that came with your install. The second is=20
a backup of the stock Paris presets. I'm no tech but you can try=20
this at your own risk. You are having a problem with one of those=20
files. If the first is missing then there's your problem. I'd remove=20
the words (default) from the second if that was the case. Others
here should be able to help you with anything deeper than this.

If you're on XP with a P4 turn off Hyperthreading in the BIOS.
Is Windows crashing? Are you getting blue screens?

Maybe you have a defective Paris disc?

Ain't no technician,
Tom

"dan b" <daniel_burneNOSPAM@yahoo.com> wrote in message =

Ok, so I've reinstalled the FX subsystem. Still no joy. All presets in =
the
main library lost between reboots, and sometimes also restarts of =
Paris...
Any more ideas!?!?!?

Thanks,=20

'd worry for instance that the left=20
could trigger because of a tom strike but the right would not.

Wouldn't it be easier to run a stereo EDS comp in aux 1,
send your drum mix to it how you like using aux sends and=20
route the output of aux 1 via external to two channels by
patching aux 1 to spdif in and out and then to two channels? =20
Print them to disk and compensate for latency that there?
1ms does it for me at that point assuming no look ahead. =20
Don't forget the spdif cable connected looping from in to out=20
on the Mec.

Seems like the easiest way using EDS effects. Of course you
can also throw in any other VST effects once the tracks have been
printed. As long as your sure of the drum mix you can do this
as your last step. Kinda backwards but we use Paris don't we?
Gyro Gearloose

"Dimitrios" <musurgio@otenet.gr> wrote in message =
news:4310906a@linux...

I am sure there are some of you that have tried or still use the =
following
method.

How to group stereo drumtracks in Paris put them a stereo compressor =
just
using two instances of EDS compressor.

1. I put on aux1 eds compressor with the following settings:
Gentle Crash algorithm with 1:75 setting -81.4 threshold and 17.5 db =
output.

2. I do the same on aux2 putting another instance of same =

compressor.

3. I open aux1 and aux 2 on all drumtracks, here I have one kick, two = snares

(top/bottom) two overheads (L and R) one ride and three toms

4. Now I put all auxes on pre post and I put all faders down to = zero.

5. I put all drumtracks in the stereo field i.e Overheads L I open = only aux1

and close aux2, the opposite for overhead R, the volume now is on = aux's

knob.

For kick I have both aux1 and aux 2 engaged with same volume for = both
etc....

6 I can leave the return of the drumtracks on aux's returns but I = use

instead wire out #0 for aux 1 and wire out #1 for aux 2

7. Then I go to two free audio tracks and put there wire in #0 and = #1
accordingly.

8. I pan them hardwired left and right. I can take it further with = eq or
whatever from there....

So I have a compressed drummix stereo with EDS compressor using two instances of EDS comp.

9. You can write down the compressed stereo track and bring it in = along with
unprocessed drumtracks ,slide it until it sounds right nad voila.

I really like the eds compressor on gentle crush setting , I also = favour the
Opto.

Cheers,
Dimitrios

in message=20
news:4310906a@linux...</DIV>I am =
sure=20
there are some of you that have tried or still use the=20
following
method.
How to group stereo drumtracks in Paris put =
them a=20
stereo compressor just
using two instances of EDS =
compressor.

1.I=20
put on aux1 eds compressor with the following settings:
Gentle =
Crash=20
algorithm with 1:75 setting -81.4 threshold and 17.5 db =
output.

2. I=20
do the same on aux2 putting another instance of same =
compressor.

3.I=20
open aux1 and aux 2 on all drumtracks, here I have one kick, two=20
snares
(top/bottom) two overheads (L and R) one ride and three=20
toms
.
4. Now I put all auxes on pre post and I put all faders =
down to=20

zero.

5. I put all drumtracks in the stereo field i.e =
Overheads L I=20
open only aux1
and close aux2, the opposite for overhead R, the =
volume=20
now is on aux's
knob.
For kick I have both aux1 and aux 2 =
engaged=20
with same volume for both
etc....

6 I can leave the return =
of the=20
drumtracks on aux's returns but I use
instead wire out #0 for =
aux 1 and=20
wire out #1 for aux 2

7. Then I go to two free audio tracks =
and put=20
there wire in #0 and #1
accordingly.

8. I pan them =
hardwired left=20
and right. I can take it further with eq or
whatever from=20
there....

So I have a compressed drummix stereo with EDS =
compressor=20
using two
instances of EDS comp.

9. You can write down the =
compressed stereo track and bring it in along with
unprocessed =
drumtracks=20
,slide it until it sounds right nad voila.

I really like the =
eds=20
compressor on gentle crush setting , I also favour=20
=
the
Opto.

Cheers,
Dimitrios

Back in the 70's I attended a series of debates between Madalyn Murray O'Hair and number of Austin pastors on the University of Texas campus. Bottom line was that she came off looking like a total religious zealot with atheism being her particular religion.

I sort of walked away from there shaking my head and feeling sorry for this incredibly well educated and articulate person who had unwittingly created a "theism*" from the void.

www.superaudiocenter.com

DubyaYes, and of course with the self as deity..

She was a good friend of my uncle. I have several atheist uncles.

Growing up required me to be able to stand being challenged, and
hard, from about the age of 12, if I deviated from the atheist

orthodoxy. Which of course, I did.

The natural results of her choices and beliefs came true in her own life.

>I finally got my new audio hard drive squared away -thanks to several members
of this group. I've been away from writing and mixing for many months, in
part due to my renewed fascination with the electric geetar. It was good
to hear Paris purring out on old mix. However, if I don't reload the scherzo
driver on each boot (after having removed it prior to the previous shut down)
I'm getting the error message "Paris engine not initializing error code 61/3d."

I don't think I've seen this one before, and I can't find any information
about it in the archives or on Steve's site. I tried re-seating the card,
and I've checked all of my connections. The system (Athlon 2200xp, Asus
A7s333, Win98SE) is loaded with Paris in the 2nd PCI slot. Also, what the
heck is "ACPI IRQ Holder for PCI IRQ Steering." Whatever it is, it's taking
up alot of IRQ's Can I get rid of this thing????

Thanks all.

I sometimes use waves gold 3.2 it works on the G4several people, including myself, are using that mobo with XP. The ACPI steering IRQ is more or less an intermediary for your PCI slot to the system. I have no troubles on that mobo with XP, however we'll need to know what else you're running in the PCI slots and why you chose slot 2 for the EDS. IIRC, 98 doesn't IRQ share nearly as well as XP and may be some of the trouble. Have you / can you move around EDS card to another PCI slot?

to do this.

Thanks,
JohnI ran across it in the manual, cleverly hidden in a small section about
the auto scroll buttons. The shortcut is: CONTROL-HOME

John Shapiro wrote:

>Aaron, thanks for responding.

I've got Paris in slot 2 for no other reason except that it was suggested to me. I didn't understand why. I figured that higher slots perhaps got higher priority on a systems level. I've got my vid card (ATI Radeon 9000) in the AGP slot, PCI slot 1 is empty (in part because of heat issues from the vid card just above it), EDS in slot 2 (as noted), a SCSI controller card in slot 3 (for my SCSI CD writer), slot 4 is open, slot 5 has a Soundblaster Live card. In answer to your question, I can move the EDS card around.

Any further thoughts? Thanks again.
