Tom,=20

I'm clocking 9 devices from a Mytek WC which is being distributed by =  
Lucid distro boxes. The cables range in length from 1/2 meter to 2 =  
meters. This setup is working fine for me.

My thought is that if you don't have 3+ interfaces's, best to leave  
well enough alone... but O'yeah, I forgot, I'm talking to DJ :-p

David.

I tried but never got it to work. This was one of the main reasons I started playing around with a Two-DAW Mix Setup.

Gene25' is pretty long. I've got a 7 meter Canare cable that I just can't seem to use effectively. I used it a couple of years ago with an older POD Pro, but tried it recently with a TC D2 and couldn't achieve reliable sync. I don't really use the digital I/O of the D2 enough to make this a big issue, but I'm going to put the Canare on a cable tester soon and see if it's defective.

I'd appreciated any input from Cubase users on what you like/dislike about  
the app.

Thanks!This is a multi-part message in MIME format.

Thanks you guys. Will I then keep the Mecs in series with the  
other WC devices connected?

Tom

"EK Sound" <askme@nospam.com> wrote in message news:44579552@linux...  
Hi Tom,

No change to Paris is needed unless you add an additional interface. =20  
Identical length cables are not necessary, or practical. You \*must\* =20  
use high quality cable and connections though, this is very important. =

I have our WC gen in with the console housing and my cable runs =20  
(Canare LV61S with proper crimp connections) vary from 1' to the =20  
longest run of about 25'... no problems.

As for the extra detail, the difference will be slight but it will be =20  
there. The most noticeable difference will be with a project from =20  
scratch.

David.
