monitors having glass behind them - I tried that for awhile in my current place & I didn't really like it... moved the listening position to one of the other walls. What if you covered the far left & far right window frames with plywood & then either some kind of Auralex foam or better yet glue some OC-703 covered with some fabric on top of that? That way you could still have the middle window to let some light in, but you'd get some good absorption behind & right around the speakers... having the one section of glass in the middle wouldn't be too disastrous, I don't think.

-----=_NextPart_000_001F_01C71393.B6F9E860--Tom...the Drumagog "recorded" files thing was from drumagog 2 before you could use "external files" That was just left over, and I forgot to delete it. I don't do that anymore, it's a hassle. It refers to recording your own sounds into drumagog. I never use the stock sounds.

While I'm definately going to continue to use Paris for tracking and mixing, I've been thinking more and more about getting some sort of in the box solution for writing. I'm thinking about building a computer around an Athlon 64 4000 and some sort of mobo with an FSB around 1000mhz (I can't believe that sort of speed on the FSB -blows me away everytime I think about it..) I'd like to be able to run about five to six synths, three verbs on fx sends, and of course several comp plugs and eq's etc on the various channels. I'm wondering if anyone has a similar set up and what sort of track counts folks are getting.
