Paris eds effects react different (sound different) under Me than in XP.

Now that is most interesting.

I checked with a B3 file and Big Eq from Paris.

Turning all the way up to 20 under Me gave a fat distorted sound.

XP !

Overall Me (well Paris under Me) sounds fatter and distorts more easily...

Please if you have a second bay disk with me and Xp try a file to hear what you get ...

I am very very curious and shocked...

Regards,

DimitriosI'd think a few well placed grommets, shower curtain hooks and a nice rod suspended from the ceiling would do the trick nicely.

You might want to consider framed Corning 703 panels wrapped in a nice fabric and mounted on stands for portability. Definitely more expensive but will do a much better job of taming the highs and lows than packing blankets and if you take your time making them they could be mounted on your walls and be quite "attractive"

(I don't believe I just said that)

DJ, I'm looking to cut the high flutter and mids.  
Sounds like the ticket. What do you use to hang them?  
Since this is my living room, I need to be able to put them up and take them

down easily.

I know you are right but the statement below still threw me.

Actually, I though the site has a lot of good information and some of the comments are priceless.
