---=_linux490e36f8--Hi Mike,

Thanks very much. I did use the affinity tool, but only on the scherzo driver for the one card that's in the expansion chassis. I'll take a closer look if I need to be doing it with other drivers.

Also, my system is just a dual core, but the affinity tool showed 4 cpu (0-3). Is that correct?

I'm just reinstalling windows, so I'll give it another shot and post back.

Cheers,

TC

The 4 CPU thing is weird. I'm pretty sure that my dual core just had CPU
0 and 1. I'd try locking it to CPU 1. This may be a stupid question, but
are you sure it's not a quad core?

Good luck with it. It can be done. I've got PARIS working perfectly on
my quad core under XP SP3.

Make sure you're also locking the PARIS app with the Tom's Hardware tool.

All the best,

Mike

companies in the world.and American damn it.
brilliant brilliant engineering.
I was invested heavily in their products well before Paris was
conceived.some of the best equipment known to man.
I know a person involved when emu took over and remember the story being
that all the engineering data was gone .there was no transition team.
that includes the art work for the ESP 2 chips.
good luck reverse engineering that.when they were gone they were gone.
im getting bummed out talking about it.:-)

- KI'm so lame - you just jogged my memory - I just remembered your last
email. D'oh, sorry, I'm on it!

- KHi Mike,

I'll double check the # of processors when I boot back to OSX. Is the Tom's Hardware tool just the "Interrupt Filter Configuration Tool", or is there something else I need to download?

I just don't see how I can "lock the app" through that, just drivers..

What am I missing here?

And by the way, thanks for your hard work, it's truly amazing what you are doing to move Paris forward >>>>>.

Cheers,

TC

Mike Audet wrote:

This mac pro is a 2x 2.66 GHz Dual Core Intel Xeon

So it's 2 dual cores.. should I lock to 1 or 3?

Cheers,

TC

I tried again locking it to 3. I still didn't see an option to lock the paris app itself, but I locked the scherzo and midi drivers, as well as the primary and secondary pci bus, in case that was relevant.

When I launch paris I get the same error as the subject line, and it crashes.

Anything suggestions?

Cheers,

TC

Yeah I just remembered this, we talked about your father being involved with the Gibson Centre in Alliston, and them buying their piano from me...

Yes it is just West of Orangeville.
East Gary.

Peace,

Ted

This is not my space - it belongs to our Keys player and her husband, who is our Sound Man. They have 500 acres in the country. Someone else here said "I don't have a lot of money, but I have friends who do, which is the next best thing"

Hey Kerry - Thanks so much for all the work you're doing for the PARIS community.

Ted

You're welcome, Ted - though it's hardly altruism, I get to play with all the new developments too ;)

The hero of the story is Mike Audet. We'll look back at the development work he did in 2008 as a turning point for the continuation of PARIS, like the release of the XP drivers in '03 was.

- KCan you find out your IRQ assignments for other stuff? We Mac users aren't even supposed to know those exist, but maybe under XP...

- k

itself though. I locked all the pci buses to the same cpu.. now I'm
probably screwing things up..

Strange that on my install the other week I got paris running. Now on my
reinstall it won't even launch..

I'm looking on ebay at a cheap backup Athlon pc in case this doesn't
fly.. haven't given up yet though.

Cheers,

TC

Hi TC,

I think you're almost there.

You have 4 cores, so you need to lock to cpu 3.

You have to use the Tom's Hardware utility (attached) to lock the app to CPU 3 also. Just run the Tom's Hardware app before launching PARIS after first creating a profile for PARIS.exe.

Let me know how it goes.

Mike
