> <http://www.macmusic.org/news/view.php/lang/EN/id/4281/>I've had an absolutely wonderful pianist over here for a session tonight doing some cover tunes. He's got a Yamaha controller with some nice piano sounds and was pretty leery of using a VSTi so we started out using his keyboard DI'ed. I also midi'ed him up to Ivory and started tracking both Ivory and the Yammy into Paris. Then I A/B'ed the tracks for him and after about an hour I couldn't get the guy to stay focused on the session he was so wrapped up in it. Luckily, the artist who hired him was pretty forgiving of the waste of session time and we got to enjoy some pretty inspired noodling around.....on the clock of course. I'd say the session went 3 hours over because of Ivory so it came close to paying for itself in one gig.

This VSTi is truly amazing in the hands of a great player with a great controller. I forget which Yamaha controller he was using, but it was an older one with fully weighted keys and complemented Ivory to a tee.

(yawn.....off to bed now.....ta!)

;o).showed it to my wife...she calling a lawyer...thanks...it is funny though...sigh...

On 31 Mar 2006 16:27:14 +1000, "James" <no@noway.com> wrote:Not true about dual CPU. I have offered repeatedly on here about my setup that I ran for years without no problems. However, it was a dual pentium running on windows 2000. It ran flawlessly except the shut down, but I lived with that. Brian T. asked everyone what their setup was and it appeared I was the only one that was running a dual pentium processor, but others were having issue with the AMD dual. So I know for a fact that dual pentium work. In fact I am on a super fast pentium 4 now and I still believe that my older dual pentium was faster on everything... screen writes (and I am using the same Matrox G-450 video card) and just useage. I'd go back to the dual pentium but the prices went through the roof on the motherboards... so I just went with a Pentium 4.

>>Hello all,

I was wondering how advancements in flash memory have come.
Is it feasible to get a couple of flash drives..40gb etc..
and load windows XP on it and boot from it (run paris from it)
and stream audio from another flash drive?

Speed, reliability, benefits?????

Thanks,

BrandonFor those interested in hearing the demos:
