Are on Point! :)

As for the sound of Yammy's converters, well let me just say this.. LAST year , a friend did a project on his then New Yammy DW 1600 portable digital 16 track recorder. Well, to the point, when we flew those tracks he recorded into Nuendo to mix, I was shocked. He used nothing but the 8 on board Pre's. To be honest, we could have mixed the songs on the unit. It was that good. Very wide , opn, big sound.

Another example of Yammys converters can be heard on the AW4416. Whe

w!! Turns

out that Yammy used their 0296 mixers technology and converters & pres.. The Newer Aw2400 uses the DM-2000 Pres and converters.. Heck! Have you every heard the Motif ES/XS Workstations Sampling section?? The 01x? , the I88x(Very in demand).. All these units have the same stellar converters.. That to me.. Are some of the best on the Market. Even sweeter sounding than RME.. They are that good..

So, you're not losing in the sound department, heck, you'd be gaining..

>> MRDo these other units access the dsp within the host mixer for native mixing, or just controlled by the host mixer for use in the dsp mixer if you either mix there after mixing natively, or for monitor feeds, etc (a la the Yammy DSP2416 from a few years ago - cool in a way, but a big pain to use since you either mixed natively, or on the DSP2416).

We've been wanting Fairlight to release their CC-1 card for general VST use and access from any host, but of course it's only developed for Fairlight consoles, so no really joy there for other apps.

---=_linux47e01ad2--All,

Please be aware that MS has shipped a known bug in Vista SP1 that renders the Windows Image Acquisition (WIA) subsystem useless. At some point in the future, MS will issue a Hot Fix to correct the problem.

So, if you're using a camera, scanner, or other input device that uses a WIA driver, the device will no longer function after installing SP1.

Other than that, SP1 fixes many USB printing and scanning issues (but, unfortunately, breaks WIA).

Hope this helps!

Mark

James, are you just talking as a believer or are you knowing some other, real facts of the story Bill is talking about?

ErlingMark,

THanks for the update...After reading the articles on it, I think it's still best to steer my business customers to XP.

How have you been?

>I just have one question for you both.

What would change in your beliefs if it could be shown that the real Jesus was the one of the Bible? That all the best evidence, when considered outside of philosophical pre-commitments, shows that Jesus was who he said he was, and the story of his origin, purpose, his life, death and yes his resurrection, as shown in the Bible, is pretty much spot-on?

What would happen to "faith as human myth-making and story telling"?

What would happen to Scientology?

If it is true, would it not affect your beliefs profoundly? If so, then I would suggest resolving this issue is an important task; perhaps the most important of all the things we do in this life.

Gilgamesh? How would that shake your own belief system (I'm not saying one way or the other) and what would you do with it?

>I am still trying to configure this thing. If you hit apple and M you get
the mixer. How will you be able to see both? Remember I am running 2 MECs
and need to record on 24 tracks at the same time.
Stevelf this is all your Paris inventory, then you can't get 24 channels of
i/o. At best, you get 12 = 4 analog and 2 s/pdif per mec.

Options?

Get a 3rd mec and 3 of the if/2 boxes. That'll give you 8 channels per
mec. Of course, that assumes you have a way to get your frontend
signals to 6 s/pdif channels.

If you have something that can convert to adat, then you can get some
adat cards.

Otherwise, you are basically looking at finding 2 of the 8-in cards.

Setting up the patch bay is pretty standard once you get the add-in
cards installed. Paris should recognize them and you just connect to
the mixer.

Monitoring of the secondary cards is automatic thru the primary card.
No need to patch cards B and C to A.

Good luck.

http://en.wikipedia.org/wiki/Jewish_ghettos_in_Europe

http://en.wikipedia.org/wiki/Jewish_persecution

excerpts from this article

During the Middle Ages in Europe there was full-scale persecution in many places, with blood libels, expulsions, forced conversions and massacres. A main justification of prejudice against Jews in Europe was religious. Jews were frequently massacred and exiled from various European countries. The persecution hit its first peak during the Crusades. In the First Crusade (1096) flourishing communities on the Rhine and the Danube were utterly destroyed; see German Crusade, 1096. In the Second Crusade (1147) the Jews in France were subject to frequent massacres. The Jews were also subjected to attacks by the Shepherds' Crusades of 1251 and 1320. The Crusades were followed by expulsions, including in, 1290, the banishing of all English Jews; in 1396, 100,000 Jews were expelled from France; and, in 1421 thousands were expelled from Austria. Many of the expelled Jews fled to Poland.[2]

Tsarist Russia

For much of the 19th century, Imperial Russia, which included much of Poland, contained the world's largest Jewish population. From Alexander III's reign until the end of Tsarist rule in Russia, Jews were restricted to the Jewish Pale of Settlement, and banned from many jobs and locations. They were subject to racist laws, like the May Laws, and were targeted in hundreds of violent anti-Jewish riots, called pogroms, that had unofficial state support.

 I have no idea what you ar talking about. In the first case "at best" With
 only one MEC, I am already running 16 inputs and have been for years.
 What I am trying to do however is get a minimum of 24 simutanious recording
 tracks.
 My inventory in total is 3 MECs, 5 EDS1000s, 3 control 16s,3-8 channel input
 cards,2 adat litepipe cards,5 G4s, 4 flat panel monitors.
 However, all i should need to pull this off is 1 Mac G4 with 3 EDS 1000 cards
 in it, 2 MECs-one on EDS card-1 and the other on EDS card 3. In one MEC I
 have 2 - 8 channel input cards, and in the other MEC I have a single 8-channel
 input card.
 Am I correct so far? Now I just ned to know how to configure it and be able
 to see both mixers on the screen and be able to record 24 analog inputs at
 the same time. I am not interested in running litepipe for this gig.

This kind of sucks...

A major mind and writer.

DCHmmm, I was not refering to Jesus at all, just refering to "the start" of our own religion. For me, it seems you're just coming with questions that's giving more questions about believings. You are referring to the Bible when referring to Jesus, but don't forget, the bible have an old part too, that have nothing to do with Jesus's way of living.

I can take a parallel to the New Testament, a modern Jesus, that died in 1948, Mahatma Gandhi and his life in India. Many parallels to the New Testamente in a modern way, when the British ruled India before they splitted it up in two new states in 1947. <http://www.mkgandhi.org/> Pretty much the same philosophy and story, just happened in "modern" times, where most of the stories about Gandhi can be confirmed as real; where the bible, for me, are about real truth and believings that can't be confirmed, just because these old stories just started from mouth to mouth, long before something could be written down at all. I'm a believer too but not for every price.

>Whoa, Nelly!

In your original post, you didn't mention having adat and 8-in cards, so your real question is how to get all the hardware to appear in the Paris mixer window?

I am a PC user, not a Mac guy, so for me, I have found that using any more than 1 mec worth of i/o requires enlarging the mixer window to about full-screen size. Then I can lay out all the components and spread them out so the traces are clearly delineated. Are you having a problem changing the size of the mixer window?

In the mixer window, all the Paris inventory shows up in the list on the righthand side. You may have to scroll down to see everything, but if it all is hooked up right, it should be listed.

Check out the Paris Reference Manual, Chapter 4, starting on page 31 (or page 61 of the acrobat softcopy).

You are correct about putting 2 of the 8-input cards in 1 mec and the other in the second mec. Actually, to get 24-input, you only need one 8-input card in each mec since you have the 4-inputs of the mec already available. In other words, you have 12-inputs per mec/eds.

Rod, I have tried to contact you and some others by way of e-mail and get "undeliverable"

One thing that is not helping me here and is why I am trying to e-mail some of you is because I am extremely dyslexic. Typing these posts take me sometimes 3-5 minutes for what takes anyone else 20 seconds. It's appears to me scrambled and upside down at times. Watching me write out a check is halarious! But not to me. Sooooo anyhow I really wish I could talk to someone on the phone and would have this licked in minutes. Then I could quit pestering you guys.

Please attempt to e-mail me and hopefully I can call one of you who are running 2 MECs.

Blessings,
Steve

If you are running two EDS's, do yourself a favour and get a
second monitor for your rig. (the bigger the better..)

A 22" widescreen will do nicely, as you can see all 16 channels
of the submix, plus a few aux's, without scrolling.

Or pick up a 19" CRT (often found
on the kerb these days..) and run it at 1600x1200.

Configuration for 2 MECs, Virtual EDS card, none of the inputs working.
Maaaaan, need to talk to someone.....
Steve! I'm not familiar with macs, but any recent low rent graphics
card has two outputs. Can't you swap the existing card with
one of these?
If not, your only option is to toggle between mixers by bringing
up the project window, (press "p"), and click on the "M" button
corresponding to the submix you wish to view.
Unfortunately the Paris windows are fixed in size, due to the
fact that they are "hand drawn" bitmaps. You cannot shrink
them in size like you can with most other applications,
you can only increase screen resolution to allow more info to
be displayed.
Therefore, I cannot see how you can view 24 channels on one
monitor unless you use the Mini Mixer, as suggested by another
poster.

Kim

The only solution is to increase your desktop size, or reduce the
number of visible channels in each submix if you wish to see more
than one submix.

>>

>> <http://www.merging.com/>

>.....Having said that, you COULD conceivably set up two mixer views, one above the other, by minimising what is shown in each submix.

I.E. get rid of the faders, aux sends, and/or inserts.

Set up a view that only shows what you need, and see if it will fit on half the screen.

Then do the same for the second submix, and arrange the two, one above the other.

Maybe I'm missing the point of your post, as I just jumped into this thread without checking the last few days.

Good Luck

Man... I thank God for you guys.HI Dedric,

Depending on the unit from 35k to 60k depending on which base unit.
There are various options for the units also that range from 1500 to 8k.
We just started being dealers for them and Cedar so and I'm still
figuring out some of there setups.
The software and over all package seems more geared to broadcast and
mastering houses. They also do SACD authoring stuff. Probably not what

you would want for the composer music producer end of things. Pro Tools, etc are more suited for that.

Chris

However they do convert to 196 for any effects or processing, then back to DSD. Supposedly sounds extremely good none the less. If you had an old school room with an effects console like that new SSL and a ton of outboard, it would make a really kick ass DSD recorder/editor. DeeJ?

ntologists. Hubbard was trained as an engineer and he
>>> insisted that his technology be as workable and repeatable as e.g. the

>>> formula for building a bridge.

>>>

>>> Many Christians, Jews, what have you are also Scientologists - but
>>> saner, happier ones. Hubbard wrote, "What is true for you is what is

>>> true for you."

>>>
