Here it is. :)

Let me know how it goes.

Do you mean distorted guitar or clean-ish electric (or both)?

Just wondering since I noticed that price point too!

Neill'm using the latency measurement tool in cubase.

> NeilHi again Ed,

You see, I don't have these problems at all with any of my Behringer mixers. I am allways trimming the gain control at the top of the mixer to feed the fader with enough sound at about 0dB and I can see the red lights going on and off on the Paris 8in cards when the signal peaks at top. For me, the level peak metering on the Behringers are nearly allways working in the yellow area, not the green; and right before clipping red.

By the way, I've found the manuals for the Paris 8in/outs cards. If you need them I'll send them to you.

Good luck

Erling
