r />

there with them on 9/11, 9/12, 9/13 etc., and tells the story in painful
detail in his book Against All Enemies.

4. I'm sick of hearing people talk about how it's a mistake to think
Bush is not intelligent, that beneath that lack of eloquence is a shrewd
leader. Bah. The man has worse problems than language mangling. He
clearly has reasoning problems, shows no evidence of conscience, and
apparently has learning disabilities. My long distance diagnosis is
alcoholic encephalopathy, but there may be some other substance abuse damage
as well. But to put it simply, we have an evil moron for a president.

5. Why evil? Well, how 'bout the hypocrisy of calling oneself a
Christian, talking about a personal relationship with Jesus/God, and then
believing it's OK to decimate whole populations for one's personal gain.
That just don't sound none too Christian to me.

6. Even if we could stop Bush and his band of Bushies right now, today,
how many decades is it going to take to undo the damage? Will the USA ever
again be the "Shining City on the Hill?" I hope so.

Wilson, McKinley, Buchanan, and van Buren may have been incompetent and/or corrupt, but none had the ability that the Bush administration has to make this planet unliveable.

Bush and his whole greedy, lying crew belong in jail.

And what did you do on YOUR summer vacation? :)

they dropped

VST support in some of their software, but you still have other choices on a Mac to use VSTs, including your favorites from Steinberg. Many new plugin development companies showed up because the new AU format created new opportunities for start ups. It's all good.

By the way, read this: <http://www.voxengo.com/press/114/>

```

these developers take on 64 bit.

Dedric, i agree with some of your points as well, however I don;t that we
should let the developers dictate the pro audio market. They(should work)
hard with the OS vendors.

I would say Core Audio has worked to the advantage of DAW users.
Everything works and works together. Latency is low. You can cascade
different IO boxes from different companies as a single large IO.

Can't find a reason to criticize it. And I wouldn't leave out the main
reason for Core Audio: Having low latency, high performance audio
capabilities integrated into the OS.

Your reasons are valid, they just overlook the main reason - and yours
are icing on the cake.

ASIO is perfectly

In fact, Apple promotes other MAC audio and DAW products and works with their developers.

I think Apple bought Logic partly to prevent a large DAW from leaving the Mac; to capture the Logic market and bring it to the Mac (they dropped MSWindows support); and to establish the ecosystem for audio on OSX - demonstrate that it's a good p

ducer friends I work with that have used it, several times...), but the service I got from Staples/HP the one time I had to use it, was, however surprisingly, much better and way faster - can't beat 20 minutes from dead PC to new one that is twice as fast, not a refurb, no bench test, no shipping costs - that rivals golden support packages from high tech companies, esp. considering that Staples is only 300 yds from my office ;-).

Sounds like you're keeping busy with some cool projects. Congrats!

Cheers,
-Jamie

www.JamieKrutz.comDon't quite know why you can't get a thumb drive to work with Vista. All mine do, and they're all generic, largest is 4gb, but the usb 40 gb notebook drive works perfectly as well.--

Martin Harrington
Lend An Ear Sound
Sydney, Australia
0414 913 247It's working now???.....awwww.....c'mon....let me help you fix it.

;o)
