Ok. I though this was the original "Mac from hell" G4. Now you have a new Mac and it's crapping out too? My Voodoo curse theory is starting to hold some water then. ;>)

AMD 64 dualcore CPU's. Yes, they are quite a bit more powerful than the
single core's, but not nearly what I'd hoped to see and the peripheral
issues with UAD-1 cards have been a serious PITA. At the same time, I hope
AMD stays competitive. I remember when a 350MHZ Intel DAW cost big bucks
because there was nothing to compete with it. The first Athlon changed the
world for the better.

> HI Dedric,
Yes the Woodcrest Xeon chip.
If you look at the 64k buffer part of the list it is the ivory colored
bar. It has the best score of only 53% cpu at 64k buffer amd the Conroe
and Dual Opteron 285 tied for 2nd place. The X2 4400 score was 70% at
64k buffer. The most disappointing results are from the new AMD M2
processors but I think there is 3rd party chipset issues involved with
that.

AMD has quad core Opteron CPUS in the pipeline but of course so does
Intel. Thats Quad core on the single socket and dual socket boards. But
we won't be seeing this till after Vista is out I think.

www.adkproaudio.com
chrisl@adkproaudio.com I thought this was funny. Two of the voice commands Windows vista
accepts
are "Start Listening" and "Stop listening".

If it wasn't listening, how would it hear you say Start Listening?

Tree falls in the woods anyone ?:-)

ChuckMy os does that too, but the commands are

blorg blorg ditto blorg
blorg blorg blorgo ditto
