there, I usually have my rep at <http://www.gocsc.com> spec that stuff up. It
is not cheap, but if it's what's needed to get the job done w/o failures,
well....
I have heard from local TV guys that there is also multi pair/multi type
armored available, and there of course is armored fiber (multimode and
single mode) for the cleanest possible data transfers. Camera guys are using
this stuff in the field, right now. Check with Belden? They're usually on
top of this kind of thing, I'd start with them.

>>At work, we're IE only. The problems I have are lack of pace with Outlook 2007. Things like color coordinations, being able to see more than one day at a time, the entire look/feel of the left pane not matching outlook, tasks/contacts/calendar/etc... Public folders are screwy in placements. It's **not** a good user experience, and I can see no reason for it to be that way in the GUI other than shitty coding. It seems like with every release of OWA it's always far behind in features versus Outlook, and that makes no sense. No right click for menu drop downs. We run a companyweb on MS exchange on a MS 2k3 SBS server using MS-IIS - MS products the whole way.. And it still isn't right? Puh-leeeee. I hear they're looking to try to compete with Google on web based office products. Good luck with that path, MS. Better than the previous version isn't cutting it when the previous version sucks.. day late/dollar short rings a bell here.

You?

Well I guess I won't have any thing to worry about because I don't have a hackintosh. FYI, Apple doesn't prosecute end users, Microsoft does!!!!
