>(859) 635-5762HEY you freaking guy MIKE !!

I missed your post !

Wow that is what I asked for some weeks before !

I will donate something to you ,not much right now but will follow more !  
FreakQ is great now, would be perfect if you could find a Q factor but anyway  
this is a BIG update to the other one !!  
Heads up !!  
Dimitrios

It has to do with the quality of the songs to begin with. They aren't  
writing "aja's"  
anymore but I like very much what's coming from D & W these days.

dbIf you like drum machines that is. There's 2 kinds of proof that matter: There's the kind that is  
shown

in double-blind tests where someone can ID which cable is which  
when someone else is changing them w/o him seeing, and there is  
the proof that comes from someone who knows what the recording  
should sound like, and that only works when there is an objective  
acoustic reference point. An orchestra, or acoustic jazz for instance.

Complicated by the speaker level signals, but it seems doable.

Dood, they were using drum machines that R. Nichols invented  
back on Gaucho. Namely "Wendell"

Most of the recent works features the work of a young  
Keith Carlock. <---quite good. My problem with the current drum  
sound is that it is SO DEAD, hardly any cymbals etc..

dbCould work, but the test gear would likely introduce far more variables than  
AA (audiophiles anonymous)  
could accept without exploding into an obsessive compulsive fit.

I love the San Fran guy's comment about the cables being more danceable.....  
rofl.

(hmm.... since when does an obsessed audiophile dance? The vibrations would  
jar the turntable, which is of course vibration isolated from the building,  
and even the earth and air itself, but why take a chance... ? ;-)).

Then again, I would probably be dancing around too - in disbelief that I  
actually spend \$7250 on a cable,  
and hoping so badly that it made a difference that I convinced myself it did  
just to avoid the sinking  
feeling of wasting more money than my car was worth. ;-)

For sure better cables can really be better in some ways, but whether one  
can hear a 145x improvement over a \$50 cable...

Man, you wanna hear some cymbal-less drumming, check out King  
Crimson's "Discipline". Single cymbal hits on the 1-count  
every 8 or 16 measures or so in most songs, with a few rare  
exceptions in some scattered sections.

I have always wanted to be at the Guernsey fair at closing time so I could  
also detect the El Supremo at the top of the stairs. what a strange and  
somehow perversely alluring image. But then you need "perfect" speakers in an acoustically  
transparent environment,  
neither of which any two testers could probably agree upon since neither  
is really possible.

I own DP4 and have it on a G4 and while it's a very capable sequencer with great features like Polar and such, I just think that more composers prefer Logic's Sequencer for midi composing. Then, on the audio side, we like sleek, fast, audio recording and editing along with mixing.

DP is not in the league with Nuendo, Pro Tools in that department. So, yes, they have a winner with their stellar hardware...But, on the software side, I don't know..Tough call there

Your average DAW consumer does not go to their GC, Sam Ash etcand ask for DP..Rather Pro Tools (LE, M-Powered) Cubase SX, Logic Audio..Abelton Live..Acid Pro, Sonar

I hope they re-invent it's DP like Logic Audio 8, and come up with a user interface that's not so busy.. Take the Nuendo/SX & Protools Approach which is the 2 screen first (Audio arrange/Mixer)..Then, toggle your way into the Midi and other stuff..Just like Logic 8 has.

If not, their market share will continue to shrink. What DP does, no other DAW does. The tools that are embedded in that app is just plain stupid!! Conductor/arrange track, Polar and many others.. They just have to find away to stream line and dare I say, dumb it down a bit.

It seems that they have addressed the one thing that users and non users have complained about and that's the audio engine. To my ears, it did sound a bit vanilla. Now, they've twaeaked it. Hey, Dedric, what's this 64bit summing upgrade from Ableton all about? I thought  
, all that summing business was baloney. Well, everybody's got an opinion, mine is that DP 5 is pretty slick in it's own right. At one time DP was one of the top softwares in professional studios. A lot of guys still use it. Sweetwater for one, still pushes DP pretty hard.

I would call DECK a niche DAW, but not DP, there are still many users. Remember, DP is a Pro App, there are guys that can do anything with DP that any other DAW can do.

All these companies leapfrog each other with features. DP has had features that some DAWs had only recently gotten around to. There is a possibility that DP will now create PC versions due to Apple's move. I wouldn't count

MOTU out just yet, just like I wouldn't count out Sony/SonicFoundry, or CakeWalk.

very hard to follow stuff.

Having a good time at AES but boy do my feet hurt.  
The Paris dinner was a hoot. great to see everybody.  
I'll check back in in a few days.

ChrisNice Job DJ!! ..But, remember PTHD run circles (Sorry James) around PTHD on a comprible mac. Letting you run your UAD (via fx wrap) if you want to.

So, you would not have to purchase a new PC. he PC(s) you are are more than enough..

Haven't tried it with a Magma or SBS though.

>Hmmmm...thanks Dedric. there are lots of nightmare reviews of the mobo on  
NewEgg. Seems pretty buggy with mixed results of having a bios upgrade solve  
the problems. that said, the bugginess seems to be RAID relqated and I'm not  
using RAID arrays so it might be worth a shot.

I've got everything here to build one except the CPU, mobo and  
RAM.....oh.oops...I'm gonna need a compatible dual head PCIe vid card too.

..
