True, and not just restricted to computers, even... I'll bet if you ask "What's the best way to re-jet and rebuild a carburetor on a '72 Camaro with a 305 engine in order to get me another 20 or so horsepower?", someone here will refer you to the best

>no, the trick is the this.. I'll use my setup as an example

EDS 1, mixer A, MEC1

EDS 2, mixer B, -no interface-

EDS 3, mixer C, MEC2

Make sure you have a wordclock cable of quality from MEC1 to MEC2

You will be able to stream 24 channels per MEC, but only record 16 per MEC

(due to channel limitations, but you can push more audio down the auxes if you have the inputs). Be aware that

there is a known latency between Card A
and Card B reported of 10 - 14 samples, then 2 samples per each card
thereafter.

playing field. It seems to all about convenience and loudness these days, though I don't think that the new PT HD sounds bad either. There are 5 studios here, .mine, one that uses DP and 3 that use PTHD. All of us can produce a professional sounding product. I'm going to be working more at 96k in the future which will keep me *in the box* and native. It will be really interesting to learn to mix more conservatively. I've never done it.

Regards,
Deej
