You also might have other components getting hot such as the power supply.

The power can drop in voltage if over heating and cause other components to act weird or die.

If the machine is that old and you still using a the same power supply you might want to look at getting a newer one.

Hi !!
I hope that you are well with your foot !
Regarding your questions all are positive !
Yes sample accuraccy there.
No pci extra just the synplate added to scope card.
Use ASIO2 protocol under cubase.
By starting Paris Cubase follows sample accurate.
Let me know if you need more detailed instructions as how to do this !
Regards,
Dimitrios

>Ok based to many real word tests (like mixing records...) Paris does not like much the DX plugins.

I don't know if this is related to DX 9 but anyway there are many unhandled exceptions occuring.

Vst's are working smoother with Paris.

Now for Waves users while many DX versions of waves cause these unhandled exception if you will use the VST versions of waves with Paris then this will be a life saver.

You will need for these the shell2vst.exe which is a free little app that can extract from waves waveshells their related plugins.

Chainer is a must have as thru it waves vst (by using this shell2vst.exe) works smooth !

Chainer does not see the waveshells directly as other chainers too.

Now API plugins do not show thru Chainer as vst because the gui cannot load at all.

The only way to see API vst plugins inside Paris (not the DX) is by using the free multifxvst chainer ONLY from inside chainer because Paris will crash if you try to load multifxvst directly !

So to summarize till now.

Get chainer !!

Get shell2vst.exe (free) if you have wave plugins , get multifxvst (free) if you have api plugins.

DISABLE DX for Paris from Paris cfg.

To use some essential DX plugins needed like autotune !! use the FREE FFX4 chainer which will be seen from Paris as vst but will load from itself DX plugins (no vst here)

Also FFX4 does NOT see mono DX plugins.

NOW if you want to use the SSL waves AGAIN Chainer cannot open the SSL gui. To use the waves SSL you can use the Effectchainer which is a free chainer using VST and DX !

Now why not use this for all plugins ?

Well you could if you would use only VST plugins, DX causes problems still due to Paris handling DX.

Effectchai

[View Forum Message](#) <> [Reply to Message](#)

ner CANNOT load the API gui at all too.
so multifxvst is needed again.

AGAIN shell2vst is needed to extract waves as usable vst plugins.

Anyway my conclusions are that DX is a no no , use vst instead.

To complete my tests I will use the old vdx33 dx chainer but why use vst plugins seen as DX when you can use directly vst plugins ??

Make a directory only seen by Paris named like Parisvst and put inside ONLY , chainer , effectchainer, Faderworks, FFX4.

All your other vst plugins can be put in a directory named VST.
Let chainer and/or effectchainer see that directory only.

Disable DX as to have a clean drop down DX/vst Paris menu.

This for now.

Regards,

DimitriosOK,

Some corrections.

Multifxvst DOES NOT WORK with mono plugins versions and 24bit !

So don't use this.

effectchainer which is free will load the SSL waves VST just fine.

API as vst is a no no.

So use the shell2vst.exe to extract vst plugins from all waves waveshells and use the free effectschainer (ONLY from VST menu !) the vst waves.

There is NONE unhandled exception from using VST plugins with Paris

regards,

Dimitrios

contact with, that to my knowledge, have never posted on this sight. So I'm
thinking there might be a few more of us that post here that might have similar
contacts that just don't post. Probably not a large number, but then again,
maybe more than you might think. For example, if there are 400 users world
wide, and 100 of them have 2 people they know of (like me) that have never
posted, that's 200 more users right there.
Or not, I don't know. just thinking.

(859) 635-5762Hi Ted,

I'm working on NoLimit, but it's not as silly as it sounds. All of the effects share about 95% of their code, and it is this 95% that won't compile for the Mac. I just grabbed NoLimit as a semi random choice. Once I can compile one, I can compile them all.

I'm getting a much better understanding of how the libraries differ in the two compilers. I'm very hopeful that I'll have something to test before long. I've probably put about 50 hours into this so far!

All the best,

Mike

Looks like this one isn't far from you

http://cgi.ebay.com/Paris-Pro-Audio-Systems_W0QQitemZ190235447540QQihZ009QQcategoryZ41784QQssPageNameZWVWQQrdZ1QQcmdZVi ewlItem

Don't you miss the days of Frankenputer?

:-)I thought that Aaron and maybe one other person had used

this hardware in this group. I am hoping to achieve sample accurate sync using Paris as a master to Cubase 4.2 using a Scope Pro card with an attached Sync Plate. All of this needs to happen in XP on one computer. The comp is the least of my worries.

Dimitrios says it can be done but we're having trouble communicating. Maybe to this thread he will be able to?

Does XP rule this out or does Dimitrios know something that will work? I thought the ADAT sync ports on a MEC adat module were a no go in XP. I've never tried them to date. I understand that Sync Plate/Scope and Cubase 4.2 both support ASIO positioning protocol. The Sync Plate has WC in/out and ADAT sync 9 pin in/out.

Any info you can give me may help. I'd like to snag a Sync Plate before my comp comes if it's an achievable goal.

Thanks,

TomSorry man, I have 3 Scope cards but opted out on the sync plate. I use a combo of SMPTE/MTC and Adat lightpipe sync to do so.

I hear ya there. I've been doing it like that since 1991 with my Amiga.
SMPTE has been good enough and stable as can be.

I am just trying to prepare for the future with Cubase and Scope becoming
the mothership.

Thanks for the info.

Approaches the unreal

For those who think and feel

In touch with some reality

Beyond the gilded cageHi All,

I was wondering if anyone has compared the DP/Pro Hall PARIS plugin to other
hardware reverbs. I'm seriously considering selling my Lexion MPX-1 because
I just don't see myself using it anymore.

I've just been mixing a live acoustic show, and the DP/Pro hall has just
changed everything. I used to try to compress and eq my way into the sound
I'm getting out of the hall. If anything, it's causing me to do less in
my mixes, and they sound better for it.

I just thought I'd check in to make sure I'm not just letting my enthusiasm
for the software lead to me to sell the Lexicon if I'd later wish I hadn't.

All the best,

MikeDo what I do with 'outdated' studio gear. Put it in your live rig :)

Hi Jeff,

I'm too far into nativeworld to ever want to go back to a system with proprietary hardware.

;) "Tom Bruhl" <arpeggio@comcast.net> wrote:

I used the Creamware syncplate to slave Cubase to Paris. It should work just fine. Just run a serial cable from the Paris ADAT sync port out to the sync plate sync port input, set the Creamware hardware to ADAT sync and you should be good to go as long as there's no other wierd voodoo going on between Cubase and Paris and Paris and Cubase and the proprietary drives of two different DSP platforms and multiple core CPU's and Paris on Windows XP.....???

When I did it I was running two different DAWs and Paris was running on W

>Many of us may not think of Wes Montgomery as a "funky" player, but
listening to a bunch of his tracks today, I realized he was perhaps the
funkiest cat that ever strummed a guitar. His thumb-only (no pick) right
hand technique, which limited his lead runs to shorter phrases, also
gave him some chops that I have never heard anyone equal in the
strumming area.

For those who don't know much about Wes, I highly recommend giving him a
long listen. He was a truly unique and innovative player who's potential
appeal is much wider than the typical jazz artist.

If you can find it there's a live cut of "Tequila" (one of his "hits")
that scared me so much I dropped the tune from my solo repertoire. Most jazz guitar
players/students/fans know all about Wes but the average
music fan might not realize just how deep and broad his musical experience
was. He was The Man! That said, I'm convinced that George Benson is still
one of the greatest living jazz guitar players. He can still do it all!

Any ideas?

Thanks!

Ganttl've got a reverb tip.

Use the stereo crossover after the reverb returns to kill blow 150 Hz or so. This will help the mix translate to crappy boom boxes with bass boost on.

Cheers!

MikeWes was something else, for sure. On the jazz geetar front my faves are still Charlie Christian, Freddie Green (funky before the term existed), and Grant Green (no relation).

Also, another 'thumb only' guy is my fave blues player, Albert King. If I ever get serious about blues/jazz playing again I'll probably do the thumb thing. I'm OK at it now but not nearly as good as I am with a pick. And the thumb doesn't work with a power pop band.

>that scared me so much I dropped the tune from my solo repertoire.I know I asked this before,
but what is the preferred software gate among
those in the know? I'm finally mixing Monkiedrums and there's a lot of trash
in there that I'd prefer not to edit out, so some kind of gentle gate seems
to be the best option. Opinions requested.

TCBThis is the AC adaptor for the GC8 controller for the Roland R-880 reverb.
It's a line lump unit.

The one I have here is Model ACB-220 No 12449549

Can't seem to locate one here in the US as Roland US is about as worthless
as teats on a boar when it comes to legacy support.

If anyone has a line on where I might find one, it would be much appreciated.

Thanks,

DeeJl hardly ever use a gate since mixing all in the box. I just cut out or
automate levels of the tracks/sections I want to drop. I know it's more
work, but I don't trust gates that much. Does the Cubase gate work OK?

Native Instruments Kontakt sampler, the EXS sampler in Logic (and my
acoustic violin and viola :^)

Both EXS and Kontakt claim to load Giga stuff, not sure if it works in
all cases. You might ask Garritan, they would know if their giga version
would translate.

> GantHey DJ,
So you need a 220v to 9V 1200ma power supply ?
I can buy one here in Greece for you and send it over maybe.
Are you sure you want exactly this 220v to 9v ?
What are you using a 110v to 220v converter ?
Why not buy a 110v to 9v 1200ma power supply instead ???
This is exactly what I think you need !!
Let me know.
Regards,
Dimitrios

By the way - Actually playing violin and viola is cheating!
