Kerry,

The uthor refused to make a ral pdc because of some restrictions that =  
vst

plugins give.

Anyway maybe you did not understand how Faderworks new version will =  
work.

Ok...

So you have a bunch of plugins.

You collect their latencies, someone , maybe me, will post the most =  
used

plugins with their latencies...

Then you just make presets inside faderworks with name and latency.

For instance

Waves rvox 64

Waves rcomp 64

Drumagog 175

etc

Then whenever you put say rvox on a paris audio track you just will =  
scroll

your column inside faderworks until you find the one named rvox nd =  
just hit

the on button !

Thats all !!

All other faderworkds instances on all other paris audio tracks will =  
get

delayed by that latency !

Its a damn clever sustem.

It even substracts latencies !!

So if you have a overall 256 samples latency and you put a plugin on a =

Posted by [LaMontt](#) on Sat, 02 Feb 2008 00:30:27 GMT

/>

new

track that has 64 then the 256 overall does not change but the above =  
track

gets delayed by  $256 - 64 = 192$  !!!

He is damn clever guy !

Hope this helps,

Regards,

Dimitrios

--B\_3290883939\_20656351--Thanks for the corrections, Mike, I hadn't realized you fixed the 0/50 thing. That needs to be updated elsewhere too, I'll track it down. I "roughed in" more of the plug-in section as well.

Coming soon, a very cool old interview with SSC found by user Kim Webster un an Australian audio mag - lots of interesting historical perspective.
