Doug,
I'm sticking with Paris so that is crucial to me although Cubase is
also part of my setup. The motorized faders would be really great
along with transport controls. Anything else is gravy.
My setup would almost require it to fit into the C-16 shape
or something quite similar.

This is too good!

-----=_NextPart_000_00AF_01C7E0D1.5B26BAC0--What he said- except I'm logic and Paris. For me - really just Paris fader, pan, mute/solo and transport would be great. Tascam's 2440 (?) looked ideal. If a control surface can't do it all - plugins, EQ, bussing etc, I'd rather break it down to groups of tasks. ie, if it can't do all the plugin parameter control, I'd rather not use it for any part of that...

>Doug,

A controller like you are envisioning (only larger) was marketed by Tascam a while back.

<http://www.musiciansfriend.com/product/Tascam-US2400-24-CH-USB-DAW-Controller?sku=706947>

One of the main reasons it didn't fly was because it didn't have a backlit LCD with a "per channel" readout like the Mackie Control so that you could call up the various parameters on each track.

<http://www.musiciansfriend.com/product/Mackie-Control-Universal?sku=634265>

If it would have had that capability, they would have sold thousands of them.

Just didn't want you go to all this effort to reinvent the same (flawed) wheel.

Thanks for pointing that out. I'm on a business trip next week, and I think I've got my evenings free. I'll try to make a mock-up of my design to show you what I'm working on...

Doug

<http://www.parisfaqs.com> I'll be at a training class in Sarasota next week. If any of you PARIS users are near there, do you want to get together?

Doug

<http://www.parisfaqs.com> I'm very interested in this. It would be fantastic if this could somehow simultaneously access Cubase and the Creamware mixer to integrate the two. I'd probably sell my Houston controller and all my RME cards if I could integrate Cubase and the Pulsar DSP mixer with a motorized fader controller. I don't have any creamware cards left, but Aaron, Thad and Dedric do (I'm sure they love it when I volunteer them to be guinea pigs ;o) It would be a tall order, but you'd have the entire Pulsar user base as customers (and me) in about 1 second flat.

;o)

my best friend (since 1966) has a brother-in-law who's unstoppable.

-steve I never said I didn't believe in it. Where are you getting that from?

IIRC, I said that I felt that the difference was perceivable, but not enough to warrant the extra hassle of routing & rerouting everything, in my case.

And, FYI, there's almost no way in hell that I would use boutique & high-end front-end stuff & then finish it off with a Mackie mixer.

OK, I need to find out more about Creamware then - is the Pulsar discontinued or something? Is "Scope" the same thing? Maybe I'll have to call my controller "Listerine"... ;-)

> One thing I'd like to see is of course the usual play/record/ff/rew stuff,
> but
> also a talkback mic/pre onboard.

Nice idea... Up until now, I haven't included any audio in the design...

> BTW Doug.. are we looking at proprietary drivers or is this a OS-X/winxp
> plug'n'play thing?

Well, the initial design didn't have any drivers per se - it was to be purely a C-16 replacement. Adding the MIDI interface wasn't a huge deal - I just use a look up table and send a MIDI message. USB and ethernet protocols are things I still have to look into...

> Latency?

I haven't done any tests yet, but I query each button many times per second for status...

> Would it have a submix mode to address, well.. submixes?

Yes, there's a submix button, the same as on the C-16...

> Foot control inputs for punch in/out?

Well, that brings me back to the beginning of this little exercise. :-) I bought a Looperlative LP1 [<http://www.looperlative.com>] and wasn't happy with any currently available foot controllers. I bought an old Digitech PMC-10 and it's alright, but it still didn't have all the features I wanted. I ended up designing a foot controller with 24 buttons (!) on it - two rows of nine, one for selecting channels (1-8 and all) - a second row for the usual record, play, overdub, reverse, etc, and the other buttons for bank selection, programming, etc. I had so much fun with the design that I decided to make a desktop controller, and here we are...

:~)

Doug

<http://www.parisfaqs.com>Wow. That made me cry. Some people have amazing courage. Thanks.

>

> -steveTrue story. A friend of mine (Justin Yooung) just completed his first smooth
jazz CD, that was mixed ny 4 time grammy winner Paul Brown (LA).. Justine
stated that Paul uses PT HD then out into(Stems) a Mackie 8 buss mixer..

If you are or not familar with Paul's (Brown) work, just listen to the who's
who is that genre (Norman Brown, Boney James,) and many many others..Top
notch..

Boutique is only Boutique because it's the buzz phrase of the day. Over priced
old gear and newer versions of an old piece of gear is all that it is..

In the end , the ears have it.. I can truly state that any when it comes
to summing, almost all analog mixers will sound better than ITB.. And , a
Mackie can get the job done.. Just like my Soundcraft Ghost get's it done
for me..

at will not diminish

fair use. As a result, permission from the copyright owner for those uses is unnecessary. However, if there is doubt about whether a use is fair, err

non-commercial purposes that will not diminish

This is the sticky point. Because You Tube videos are now seen by millions, copyright owners are arguing lost value. Even charitable non-profits (501c3) need to pay royalties for TV and Radio use. Hi,

Would you know which 8 buss mackie mixer he uses ?

I always liked the sound of my 1202 Mackie mixer !!

Regards,

Dimitrios

Pulsar/Scope/Creamware. Same folks far as I can tell.

Shoot, a 741 with a CLM6000 strapped across it for limiting would get it
for most folks I think.

So, it plugs into the EDS CAT5 type slot, or USB or ? On this I am a little unclear.

Correction. You totally rock. This is the "real deal" when it comes to a limiting circuit that actually "works" the way it should. It's an amazing box. I've got one here, but I'm selling it to a local friend of mine to pay for Crashbasket's knee surgery.

<http://www.aybg12.dsl.pipex.com/products.htm>

The ompressor is more transparent and HIFI tan the RNC and it's almost impossible to get the expander to chatter.

I guess I can both agree with you & disagree with you on this point, depending on which piece of gear is the subject of conversation at the moment - I have a few pieces of high-end or "boutique" equipment that I think are worth every penny I paid for them (Chandler TG-2, Soundelux E251-C come to mind) while there are others that are great, but you have to wonder "do they REALLY need to charge that much for that?" I think vintage gear is in another category... that's driven strictly by availability, as, if you're looking to buy a 1073, for example, there are only so many for sale at any given time. Try making an offer of a grand to anyone selling one of those & see if anyone takes you up on it. Unlikely; therefore the market demand is what drives those prices.

See, but that's your opinion... just because you make a statement like: "I can truly state" or "end of story" (as you did in another recent thread) doesn't mean it's the end of the story for everyone, it just means it's the end of the story for you. I've done enough summing experiments (not too long ago & posted several results & examples here, in fact, as I'm sure you recall) to where I'm convinced that a.) you can indeed hear a difference, b.) the difference is not super-significant, and, c.) There are tradeoffs.

NeilHe's using 24 channel 8 buss..

It's strange how many hit records were mixed on a mackie..I too have 1202 but now use a 1604 @ home to track and monitor with.

While I don't need the Shipdriver thingie, I could certainly use their
Raildriver version for controlling MS Train Sim when I'm not mixing.

Or I'm gonna die.

pabNeil,

I'm still "really" happy with the Neve 5042 tape emulator thingie. I mean,
REALLY" happy. It's not a summing device, but it definitely adds depth and
width to the stereo image.....very noticable but it's best (IMO) to "mix to
it", not strap it on later after the mix is pretty well set. It's amazing to
switch it in and out of the mix and hear the difference (that you don't
really notice until it's gone).

;o)

Is this possible?

Are there any instructions on how to do this?

Thanks,
MikeNeil & Lamont: did either of you take the ProTools challenge and test
whether you could hear the difference between in the box Waves SSL plugs
and summing vs. SSL channels and summing? It may surprise you.

So put your money where your mouth is, so to speak, and take the test.
Then post your scores. I double dare you.

There was an ASIO driver once upon a time. Never did work well beyond a
stereo pair of I/O and latency was high in Wavelab

>
> Is this possible?

Not really, for any kind of serious use.

>
> Are there any instructions on how to do this?
>

> Thanks,
> Mike

My instructions would be to forget about the idea altogether and buy a Lynx or RME card if you want to use a different audio app. It will save you time and grief.

;o).....so the secret to getting an ITB mix to sound like an SSL is to buy an SSL, mix with it, then import the mix into PT and use plugins to duplicate the sound of the SSL mix..

This sounds exactly like something I would dream up.

;o)

Bill,

I agree with you about analog EQ adding something special. The UAD-1 Neve 1073, 1081 and the Helios EQ's really can provide that extra mojo. I'm just wondering what the point is of taking this test if the ITB mix is being modelled on a mix that was already done on an outboard console. Having said that, when I mix, I usually import a stereo master track of a song that is similar in genre and instrumentation to the one I am mixing and use that as a "go by", soloing an muting it as I go along, which is what this comparison is basically doing as I understand it. From that standpoint, you could definitely learn how to "closely emulate" a mix done on a console, but without that point of reference, it might be a lot harder to dial in that kind of similarity.

DeejThe difference (real life) is that the mix thru the SSL board becomes wider. However, I would say that clocking plays a big role int he sound department.

Again, we choose Lucid over Digis Clock and Apogee Big Ben. The Licid made the mix tighter, more focused.

So, along with OTB, clocking plays a part..

>>The picture in this article is of the mamma bear and her cub that are
raiding the dumpsters around here. I've gotten pretty familiar with the
bears that are coming on to our property and I'm 99.9 % sure they are the
same bears, plus the caption says this photo was taken in Hermosa and that's
the suburb of Durango where we live. The female that hangs out here has the
same cinnamon coloring on the back and neck with the black face and legs. We
had a very late snowstorm last spring and that apparently put a big dent in
their natural food supply.

http://www.durangoherald.com/asp-bin...ws070819_1.htm

We have three big apple trees in the front yard and theses two bears and
another "huge" male are snarfing the apples that are ripening and dropping
off the trees. They totally destroyed our neighbors plum tree across the
street the other night and are also partying at another neighbors' apple
orchard on the property two doors down. A few yards from our apple trees is
a big willow tree that is in a parking area that is illuminated by a
flourescent floodlamp. Last week they would eat until they got their fill ,
then the female would stand under the willow tree while the baby bear ran up
and down the tree playing all night long. Crash and Muffin were not pleased
about this at all.Looks like all is good.

thanks for your prayers/positive vibes/support, etc.

;o)I can't seem to remember,is Nforce chipset good for audio? I'm looking at
getting a MSI P6N SLi FI with a Quad core. I can get a system locally with
2 gigs of ram and a 250 hardrive,DVD-RW for \$999.

respect

Nappy

PS I'm doing great! I should be able to start working out soon. I see the doctors tomorrow. That's great news! I'm up and running as well. And thanks for your prayers, positive vibes as well. thanks again.

respect

http://tprc.alberta.ca/parks/kananaskis/facilities_kc_village.asp

Young Erica (7) was in front, and I was about 8' behind her. My girlfriend was about 35' behind us. We passed a tree at the side of the path and startled a LARGE adult bear that was foraging wild strawberries at the base of the tree... about 4' away. The bear sat up and jumped back a bit, then went back to foraging. A few seconds later I hear "Holy *hit!!"... :-) bear startled again! it took off this time... I have to give Erica credit.. she kept peddling even though her legs were shaking like crazy! We'll probably wait till all the berries are gone before we go again...

David.

that method can be dangerous, due to the fact that the 2 track reference mix is finished Master with added eq and compression, stereo width enhancements.

Hey . . . Nappy and Crash . . . can we make that into a buddy detective
movie or something?

I have been working on two connections - 1) EDS cat5, and 2) Standard
MIDI. The chip development board I'm using for programming has USB and
10/100 ethernet built in, so I will look into how to use them once I
have the EDS and MIDI sorted...

> Does this equate to CPU overhead of any mention?

Not the host CPU, but it does take a certain amount of the
microprocessor inside the controller itself... :-)

Doug

<http://www.parisfaqs.com> Understood. Seems like I am doing all the tracking, mixing and mastering here anyway. No one I work with has the budget for a mastering engineer so I just master as I mix. I know this is audio blasphemy, but I spit in the face of audio blasphemy and go there anyway.

(huff huff, grunt grunt)

;o)

>Hi all,

I just finished mixing a 12 song CD for my band leader. It's covers and used for promo.

The mix is thick and warm and open (depending on the tune) at mid or higher playback levels on many systems. The band digs it but at low volumes the mix loses its presence.

I'd like some feedback on how to compress and limit the final stereo mix within Paris using the global EDS stereo compressor and NoLimit. I put a minimal EDS stereo compressor (smooth 2:1 setting patch) and NoLimit on the global inserts final mix (bounce to disc) just to catch spikes and bring all

levels to -1.0 db initially.

All mix's are balanced for the CD. I just need to know how to compress or limit to get the mix's presence popping out at a lower home/car stereo volume.

Do I squash it with NoLimit or are there general settings for a stereo EDS compressor that I can start with, ie, attack, release, ratio? Do I run the threshold for a constant compression or just on kick or vocal or horn hits? I do realize I will sacrifice some tonality but since it sounds so good open I think I can find a mid point between the open mix and a radio ready heavily compressed sound that will have presence at any volume. Any takers?

BTW - FYI - BIG BEN - initially I hooked up the BB out to the MEC clock in and terminated (75ohm) on the MEC clock out. This did not terminate correctly accordingly to the tell-tell lites on the BB panel, but I ran Paris this way for a week and thought I heard a difference. When I removed the MEC clock out termination and placed a BNC-"T" on the MEC clock in and put the termination on the "T", the BB panel lites then showed proper termination. Believe it or not . . . I heard the difference this time. Very stable sound. Tight and clear and open. This is definitely the Paris sound we all appreciate.

Thanks,
Wayne Carson

Paris since '97AAAAAAsome - I'm really happy for you - I know how it feels to have an ailing pet (not one that size though - don't know how you ever kept him still) - they are family!

also you should only need to keep it down .3 DB on the master for a just in case ...

 volume when mixing, just to hear that everything is OK there too. For
 the most I'm using different kind of headphones too, to sort out that

things work OK with different kind of volumes. It's also normal that energy is missing in low volumes.

I remember old stereoamplifiers often had an on/of knob called "Loudness", to get more energy in both low and high end when listening at low volumes, just to take care of that problem. You can look here to get some more info: <http://en.wikipedia.org/wiki/Loudness>

The final test of a mix for me is to play it in my truck while driving down the highway at a fairly high speed. If it survives the road noise after all of the other types of reference I put it through (2 difference monitors, ADS 1530 speakers, jam box, funky consumer stereo and car stereo while driving), I feel pretty good about giving up on it.

;o)None sounded wider here through my system, and I can pick that out pretty quickly. I picked the right ones about half the time, but the only difference that stood out to me that made me think I had pinned each one down was dynamics/compression in the bass (the instrument, not the frequency range). Some loops sounded tighter as a result of seemingly a little tighter compression on the bass itself, but when I took the test, the actual answers rejected such a pattern, so I chalked it up to simple compression variations. That can make a mix sound wider (bass fills more of the center and "back" of the field, lessening the perceived relative volume of highs, which are what create or enhance the perception of width).

I agree with Bill - emulating the SSL mix after the fact with the PT mix is perfectly valid - that's exactly how I would do it and have offered to do this with various engineers in the past (I talked with Mixerman about doing this a couple of years ago). In my opinion, it actually proves that a DAW may well be sonically more flexible than a board (an unpopular position I've maintained for a long time).

BTW - I downloaded the mixes, stripped the audio out of the QT movies and played them back in Nuendo. I had the QT movies on the timeline though for the label references.

Using the NoLimit to "squash" the mix is not a good idea, if you like the
dynamics.
A better idea would be to use a stereo compressor first to get a little louder
average volume then add the limiter to control the transients.

To do this:

First find the dynamic range of the mix by looking at your master meters.
The point where the levels sit consistently is the average volume, the point
at which the song peaks is obviously the peak volume. The difference between
the two is the dynamic range of the mix.
EX: if the average is -15dB and the peak is at -1dB then you have 14dB of
dynamic range.

Second, set the compressor's threshold just over the average volume, let's
say for our example -14dB.

Then set a low ratio, usually I'll start around 1.5:1.

Then set a medium attack, around 40-50ms.

I like to start with a release of about 100-150ms.

Look at your meters to see how much gain reduction is occurring and add that
same amount of gain to get back the volume.

Obviously this will not work for every mix, so listen and make adjustments
as you see fit.

If you want the squeeze a bit more, quicken the attack and raise the ratio.

Or, if this is too much compression, raise the threshold or slow the attack,

or both.

After the compressor, use the NoLimit to control the peaks and to get the overall volume you desire. I like to get about 3dB from the NoLimit.

Good Luck.

I sent you a couple of emails but I haven't gotten any confirmation that you
received them. I have a client in Bulgaria who could use your help with
converting some old PARIS projects. Please contact me by email.

Thanks,

David LeonardThanks guys. I'll give it just a bit more of compression and NoLimit call
it done.

>You know, I really think this test is flawed. Both versions sound superb.
I also agree
with Bill's view that their rationale for modelling the SSL mix with PT &
plugins is
valid in a real world scenario.

The problem with the test is that it involves continuous and repeated A/B
audio comparisons.

Try taking the test this way instead:

Listen to the reference tracks.

Just listen to 2 edits, (someone else will have to trigger them
so you won't know which they are) then stop.

Wait a few hours, (or a day) and do it again. Repeat as many times as needed
to equal the total number of edits as the loop or continuous track versions
on

the Digi site (as many as 12 separate edits)

Then see what you score.

I scored 7 out of 12 on the Smooth Jazz loop when trying to do it all at once,
and 11 out of 12 when breaking it up.

Last month, we tried 2 different mics on a female singer. We tracked the entire song 3 times on one mic, then switched to the other. All 3 of us heard the difference immediately, and agreed on which one we wanted to use. The next day, I was replaying it for all of us, and switched back and forth throughout the tune. By the end of the song (4 minutes plus) even I had trouble telling which one was which, and I was looking at the screen.

Yet, when we came back on subsequent days, and listened with a "cleansed palette" all of easily identified which mic was which.

I have been involved in similar tests with pianos. Comparing Steinway, Yamaha,

Baldwin & Bosendorfer recorded at the same studio, with the same signal path. Repeated back and forth comparisons, even between just 2 of them, let alone all 4, made it harder and harder to distinguish between them. Listening to them with "fresh ears" made it relatively easy.

Ted

>>Guys,

Desperate help needed. Here's the issue:

I have GigaStudio Solo routed via re-wire to cubase 3.x (no GSIF involved).
I'm outputting through echo mia in cubase.

When I press a note, either on the keyboard, or with the mouse on the onscreen
giga keyboard the note sounds, but then cuts off before the sustain.

It doesn't matter which sample library I use, the latency setting, midi or
non midi. It always cuts off the note after about 1 second.

This is on an HP Athlon 64 with 3GB of RAM, and it all used to work fine.

All I want to do is lay down some 2 track piano, and I can't get it to work.

HELP

Thanks

ChuckHi Chuck,

Is it doing this in stand alone mode too?

Is it the most current build of Giga?

Try while in stand alone mode to disable the Mia's MIDI ports.

Also in Cubase while not having Giga running disable the Mia's MIdi
outputs so that only Gigaports are being used.

See if that helps.

You are launching Cubase first when using Giga in rewire mode correct?

Chris

chrisl@adkproaudio.com HI Paul,

ADS technologies make a PCI one that works well and is cheap.
Siig make 400 and 800 models in both PCI and PCI-e that work well.
One thing to avoid even if TI is combo cards that have both 400/800 or
400 USB etc. They can be trouble.

chrisl@adkproaudio.comHi Chris,

It doesn't do it in standalone mode.
It's the most current build of giga
I'm launching cubase first
I will try the other suggestions later

Thanks for your help

chrisl@adkproaudio.com I'm sitting here listening to Larry Willis play my piano. Gary Bartz is playing alto sax.

http://en.wikipedia.org/wiki/Larry_Willis
<http://www.garybartz.com/>

A couple of great local guys - James King on bass (it's his session) and Nassar Abaday on drums. This is one of those times that I love doing this

for a living. Whew!

GanttI've been sitting here reading Gary's discography while I listen to him play.
WHEW!

comparisons require listening to a short (2-4 seconds) section of the
tune and AB it blind. I am sure I would have scored much higher in that
mode. BUT even in the mode they used, it convinced me that the
difference is not so great.

O course this will be open for debate but these are the ones I've heard
that were descent.
Steinberg Grand 2
Ivory
NI Akoustic Piano

There are others but haven't heard them.

Ivory and Akoustic Piano are the most varied but Ivory is very system
intensive. All of them run as either DXi or VSTi so they are far more
integrated into Sonar , Cubase etc.

Not sure if the MIA is fully multi-client audio and Midi but you might
try setting up Giga as a stand alone with Sonar as the default sequencer
for Giga and se if it works.

(859) 635-5762 Hey everyone,

Right now I'm considering the M-Audio Axiom 49. Does anyone have some experience with the keyboard controllers in this (\$120-300) range? I'll be using it for VSTi in the studio. The trigger pads are a nice touch on the Axiom.

I don't really want to spend a lot of money on it -- if I did, I'd get an analog synth or the new Rhodes when they come out. :)

Thanks for your thoughts,

GrahamG -

A quick scan for "midi controller" on ebay shows several 49 and 61 key models under \$100. I have an Evolution 49 key controller here and I like it alot. Not my main controller, but it sits nicely in the corner and gets pulled out and hooked up when I need a quick keyboard fix on my everyday pc.

>Graham I have an older evo 49 key I like, and I like the CME I just picked up from Musician's Friend as well, though it backordered and took a while to get here. Neither of them is spongy/cheap feeling, but they are synth action, NOT piano. As a drummer/programmer, I prefer this. I put hands on some of the cheaper yahama & korg keys and the M Audio stuff and they all felt spongy to me.
YMMV.

The older Evolutions and the newer CME and Fatar controller aren't bad.
The CME and fatar are hard to get. I love the Novation ones but I
believe they are out of the price range you want.

Guys, skip on the SIIG from Newegg:

We regret to inform you that your recent Newegg.com Sales Order has been cancelled due to insufficient inventory.

It was discovered that the quantities for one or more items reserved to fulfill this order were either found to be damaged, misplaced, or only partially available.

If your payment has already been processed, you will be refunded the full amount of this order in approximately 2 to 3 business days.

We apologize for any inconvenience this may have caused, and thank you for your patience and understanding.

>wait.....

<http://gprime.net/flash.php/drummachine>Hi Guys,

Thanks for the input. I ended up getting some kind of virtual asio driver for giga from a place called FXMAX i think.

The other thing I ended up doing was switching audio priority to HIGH in cubase.

Now it's working fantastic, and I'm able to set the MIA latency to 64 samples, and EVERYTHING works!

My 7 year old son helped me pull the preamps and mics out of the closet and wire them up last night. We also hooked up the headphone amp, and found a couple sets of cans and got them working.

We installed groove agent and B4, and they both work great too.

We did some testing and I had absolutely no problem, or latency playing giga, groove agent, B4 with a couple live mics going.

It was great having an assistant. He helped me get all the level checks and set up a default cubase template exactly how I want it. Next step is to haul out the ampeg and les and get that setup.

Since I stopped using paris, the entire recording exercise has been nothing

but utter frustration for me, to the point where I haven't recorded in years. Last night I was suspicious that it was all really working, so I powered off and rebooted, starting up from scratch about 10 times. It's all cool.

Thanks

Chuck

The other anomaly is that on Nuendo, the CPU meter in the transport
controller moves as if a click, and with the monitors upfull, you can
actually hear a click. What's going on with that?

JohnI got lucky enough to have a 6 piece reggae band record all day yesterday and I have to say the sound and workflow in cubase was more than I could have imagined. It was fantastic. The band is blown away with the sound and possibilities. We are going to do vocal overdubs next week but I have to say the sound was even better than Paris ever was. 32 bit mixing is so sweet and forgiving and these digimax fs with rme 9652 are so fine.

I had only one glitch where I deleted an entire song because of my poor understanding of how templates work but we did 11 songs and these are great friends so I'm not in the doghouse.

Other than my own errors, I didn't have a single hiccup with cubase 4 the whole time at 3ms latency. Rock on !Yeah, I'm not really a fan of giga, or halion. Unfortunately they are the only samplers I own right now.

Cash wise I'm not really in a position to switch, but when I am I will try kontakt.

Thanks guys.

Chuck

In fact, every single "pro" controller I tried was just a big ball of compromises.

I ended up buying an 88 key yamaha consumer digital piano on closeout for \$500, complete with stand and keyboard. The action blows away my yamaha acoustic upright.

For the non piano stuff (B4) I have been happy with my little edirol board. I went through three cheap midimans that malfunctioned in various bizzare ways.

The only 88 key keyboards I like are the Yamaha CP300, CP33 and S90ES (the CPs are fantastic stage pianos - great action), and sometimes, the Kurzweil controllers, though the action is a bit shallow. Other Yamaha digital pianos also have a great feel (those are just my favorites). Nothing from Roland, Korg, M-Audio, CME, Fatar feels as playable to me.

Regards,
Dedric

Lemme guess... you saved an already-recorded song as a template, then you deleted the tracks, and so when you went back to open up the song that you had originally saved as a template, the tracks weren't there anymore?
If so, don't feel too bad - I did the same thing early on.
Found out real quick that you make templates first, THEN record something into them lol

Neilthat's exactly what I did. For something SO critical a DANGER DANGER message would have been nice !Where's your auto backups?

John wrote:

Thanks for that one Thad.

And a good read was had by all.

Cubase SX2 by Thad Brown

Peachpit Press

Rich,

Thad's book is a great way to introduce yourself into working
situations with Cubase SX 2. It is a great addition to the SX manual.

I use it and SX 2 still. You can setup autosave in preferences as I =
recall. =20

It won't protect you if you delete though...

>IIRC, and I'm pretty sure I do, Kontakt was one of those NI things that they basically bought in one piece from an outsider. Like they did with Absynth. I know where a whole lot of the Kontakt sample library comes from and it ain't Berlin. Anyway, after they bought the sampler, with their money off the table they (quite sensibly) wanted to ship something to start getting a return on the investment. So the first version was pretty ugly, and it took some time for them to get things straightened out in the code.

In contrast, the things that originate in house, the stuff that guys like Michael Kurz are doing from scratch, that stuff seems to ship ready for prime time.

The blondest moment in American history.....so far.Saw this a couple of days ago... was still
 working on a clever byline for
 the campaign to "end map deprivation now."

This isn't meant to be a political post. Regardless to your politics, people should hear this tape. Be careful you don't ever bump somebody in a bathroom, you could get charged with solicitation for sex. It doesn't sound like he verbally ask for sex. It also sounds like he didn't touch the cop in any sexual way. This audio is not the whole story, but I personally think it's a typical over zealous cop that is use to getting his way and had a big fish this time. The cop is the one that gets aggressive on the tape, I think it's somewhat intimidating.

Pleading guilty to a lesser charge if your not guilty, was a dumb move.yeppers monitor knob on the C16 was set at 6...duh

Good.

And this quote: "With this initiative, Sony is debuting an important option for digital media players as it opens new doors for a rich digital experience," said Dave Wascha, director of Windows Client Product Management at Microsoft Corp."

drives me up the effin' wall. If I hear one more guy from Micro\$oft use the phrase "rich media" or "rich experience" or just "rich", I'm going to fly up to Redmond and start clubbing people.

pabYeah, but you REALLY need to be careful who you bump feet with in public bathrooms.

It could be George Michael...

I'm gonna get some cards made up that say "POLICE" and start slipping them under the doors of occupied stalls in airport restrooms and then run outside and take pictures of the stampede with my cell phone camera and post it up on YouTube.

;oDI have a couple of official police business cards that have never gotten me out of jail free but sure have shortened some traffic stops.

But I think the USB is just a USB MIDI interface. I have six ports open on my Steinie MIDI interface right now, so that's not a problem. Is the Pro better resolution? Because they're getting blown out at \$700 and I'm a buyer

at that price.

Ha! That's rich!Doing installs... Couple of big churches..

Man I worked my butt off. We actually kicked the system designer off the first project. We walked away from a bid opportunity because the design was such a POS. (and it was done by a bigshot colleague of a major speaker manufacturer who shall remain nameless...)

The super calls me up and asks why we walked away, so I told him. He asks me to document what is wrong with the design please. I was dumb enough to do so (this is not considered good form to criticize colleagues to the client...)

But then he and the client liked what I wrote up so much that they paid off the designer, sent him away, and we got to re-design it and do the install!

That was a first...

It came out really well. Tri-amped, 3000 watts output, all DSP management, delay clusters, nice Allen & Heath 32 channel etc..

The client loves it. Now I just need to clean up the damn studio here and put the tools away...

How you all doing?

When Mackie closed the WA factory and sent manufacture to China, we had 3 DOA boards in a row, and we dropped them, when they tried to tell us "you're the only ones reporting any problems".

Hopefully they have gotten the bugs all sorted.

I played around with one of these older ones a while back and thought it was extremely flimsy compared to my Steinberg Houston controller. I disliked ATRAC the first and all

subsequent times I heard it. Illfated
DCC sounded better and I predicted the demise of that utterly illogical
format the day it was described and introduced as the beginning of the end
of cassettes and CDs.... in 1995.

>Hi Thad,
The newer version is a bit more rugged than the old one. Thats and the
better functionality of the extenders are the only real changes. I glad
they ended up having a MIDI connection like the old one. At one point it

was only going to be USB into the computer. That would have been a bad idea. long USB cabling is hardly ever reliable. There hasn't been any DAW controller in that price range that have even come close to its functionality. The Houston was the closest but was proprietary to Cubase/Nuendo.

(859) 635-5762 So Chris,

You would put this new Mackie in the same league with the Houston controller? If so, that's saying something. The Houston is well built and really well implemented in Cubase/Nuendo, IMO. I wish they would have developed an extra fader pack for it though.

Cheers,

Deej

Not sure if it would be as good in it's build quality or not haven't
touched a Houston in long time. The Mackie Pro seems to be more well
built than the old one.
The only DAW controller I've seen that is heavy duty that has a allot of
features is the Mixed Logic unit but its the size of a fricking boat.
The ID really cool but way too much money for being just a controller.

>You know the kind I'm talking about - also called zip ties; the
kind that have the serrated surface on one side of the strip
that fits into the little locking head-end. Anyway, the other
night this band I recorded recently invites me to one of their
practice sessions to hear some of their new tunes. Anyway,
they're into about the 3rd or 4th song and the drummer's snare
stops "snaring" - one of the straps that holds the snares had
broken. It also had snapped pretty much right in the center, at
a point that rendered it too short to be able to pull it out &
readjust the length to get both ends of either piece to grab in
the clamp. One of the guitarists yells out "Shoelace!" (which
also works, but you've got to be able to wrap a couple of loops
of it around the clamp for it to be strong enough & not stretch
out or break).

Enter the lowly cable tie - this place still had some
miscellaneous small piles of junk that the prior tenant had
left laying about, and I was actually thinking about seeing if
I could find a piece of heavy-gauge multistrand wire that could
be substituted, and I notice that the first pile I walk over to
had a bunch of snipped-off cable tie ends that were just about
long enough to work - so I grabbed a couple & brought them over
to the drummer & said "These should work, especially if you can
thread two of 'em through there but I don't know if one would be
strong enough." (they were the smaller ones that are perhaps

about 1/8" across). He decided to try one at first, and lo & behold, even just one of those smaller ties was plenty strong enough! The snares held through the rest of their practice, which consisted of another ten or so tunes that night, and the tie showed no signs of breaking or stretching out.

Later it occurred to me that once I had fixed a drummers kick drum pedal with one of the even smaller versions of these same type of cable ties, as well - a screw had snapped at the point where the tread plate pivots on the heel plate, so one side was fastened & the other side was kinda flopping around loose. Unthread the broken-off portion in the heel plate, insert cable tie, zip up tight & voila'!

Anyone got any other cool improvised fixes they'd like to pass along?

I want to get on the ground floor of this franchise. We could also sell coke (advertize it as "blow ;o)

Let's call it Barsucks.

;oD Maybe we're getting past the post-punk phase... I'm starting to hear some evidence of melody & musicianship in a few scattered places.

Go to this link & check out the cut called "Godspeed":

<http://www.myspace.com/anberlin>

Now THAT's the way rock should be played (and sung), innit?

"Adelaide" is not too bad, either.

NeilNeil,

I really like this stuff as pooped to a lot of what I hear these days, but from my (admitteddly) curmudgeonly POV, this stuff sounds dynamically dead in the water. the drums sound like a throbbing amorphous mass of bubbling mud. It's so fatiguing after about 20 seconds that I doubt I could endure more than about 10 minutes of this stuff without slitting my wrists.

Curmudgeon'esque regards,
;o)

I'm not meaning to slag your preference in music here. The stuff that I have heard you produce sounds much better to my ears than this does Perhaps (if you produced this) it has to do with the band wanting everything to be louder than everything else.....I dunno,.....maybe I'm having a bad day or something. I'm not anti-rock/prog-rock/metal. I guess I'm just fed up with the "wall of noise" genre. It would be sooooo nice to be able to listen to rock with some dynamics.....I mean.....WTF is a volume knob for these days anyway?

> No biggie, DeeJ - sometimes I think I'm the only 40-plus
person who likes any of this new stuff. Perhaps the
dynamics thing doesn't bother me as much since I was using an
Aphex Studio Dominator on stuff way back in the day, so I can
appreciate judicious use of "dynamics funneling", as it were -
I do think this stuff has a bit more of it than I like,
however.... Ted Jensen mastered it, though, so what do you
expect?
The thing that bothers me about excessive use of it is that you
then start to lose some clarity (and I personally always back
off a bit once I get into that zone - me, I'd rather have
it "competitive & clear" rather than "the loudest thing
anyone's heard to date" lol). I'm still looking for ways to get
that extra couple of db's though, no doubt - I'm starting to
become convinced that part of it entails going back out into
analog, because I've yet to find a digi-limiter, even the one
in Ozone, that won't start snarling at you with some raspiness
after a certain point. "Godspeed" definitely has some dirt I
don't like, and I've listened to it in the car, as well as on

my home stereo (bought the CD today), and can hear it there on all systems... it's a great tune, sung & performed & arranged REALLY well, though, and I would love to have been able to hear Mike Shipley's mix prior to mastering.

I guess I figure that the "Loudness Genie" ain't ever going back in the bottle now that he's been let out, so I can either just listen to my old Steely Dan CD's if I want sonic perfection, or I can get a dose of good new stuff every now & then & try to ignore the dirt. Personally, if they've got it loud AND articulate, it's OK with me.

FWIW (after listening to this song for about the 12th time today lol!) I think the drums pretty much kick ass - the snare has some real throatiness to it... quite different from a lot of the "parchment snares" you hear nowadays ifyaknowwhatimsayin'; the toms are thunderous, and the kick has some really nice body to it - not just a "click" - the only thing I don't like about the kick is that it's got a little too much of something in between 200 & 300, so it's hitting me right in the throat a bit too much. I think the "amorphous mass" you refer to is probably the fact that in this genre the guys NEVER lay off the brass - they use the crash cymbal like your favorite 70's & 80's drummers would use a hi-hat, so yeah there's a lotta noise there.

Some other stuff I'm diggin', production-wise:

* The portion of the 1st verse between :16 & :27 has a subtle little conga-sounding thing going on that plays off the hi-hat. You never hear this sound again in the song, it's just in that one section, and that's it.

* The guitar noise in the right channel from about :49 to about :51 seconds sounds like it's hard-gated using the vocal whisper thang as a trigger input. Kinda cool.

* In the 2nd verse, from 1:09 to 1:19, the hats play it straight & just drive it, as opposed to the heavily-accented stuff that they were doing in the first half of the first verse, however, in the 2nd half of the 2nd verse, they reverse it & go for the accents, AND I can SWEAR they're using a delay on it in a few places... listen closely & you'll hear what I'm talking about - how it falls off and how in one short section it seems to pan a little bit.

* The guitar solo that starts at 1:57 is doubled - pretty damn good work!

Oh yeah? Well, Mr. Smartypants, I'll see your DCC deck and raise you one Elcaset deck.

So there.

pabNice..
I love to vibe. Like a good throw back sound with(might I add) an real guitar solo to boot!

Good looking out Neil.

I "think" I'm getting there now. I had to take a hiatus from mixing for about three weeks while helping Amy nurse Crash back to some semblance of health. He reinjured himself pretty bad about a week after we took off his cast and we were sweating bullets but didn't permanently damage the surgery, thank goodness, so now he's getting back up to speed and I have some time to get into the studio again.

I'm getting ready to post a couple of links up in a few minutes. One of the songs you've heard (adnauseum) and the other you may have heard a long time ago. I never was happy with a certain CD I mixed a couple of years ago because I was in a big rush. the first run of CD's is about to sell out and I get a royalty on the sales so I'm remixing the entire project. Good practice on the new system.

The processing on the mix us has the following processors (top to bottom).

UAD-1 Precision EQ
Neve Portico 5042
UAD-1 Fairchild
UAD-1 Precision Limiter.

I'm using the UAD-1 Neve 88-RS console strip on every track of these mixes. This thing is the bees knees IMO.

Stay tuned

;o)ROFL man.. you actually have a working one? I have to admit to googlin' that term, it was news to me. Looks like another case of Sony being business market stupid with a superior quality product.

how it's supposed to sound. That's the sound of a "good Rock " mix today.

Neil, I like your Rock mixes a lot, but you can get that sound you want by
stemming your mix out into a analog mixer. Yes, I kow you wanted to avoid
all of that. But, I've come full circle on this. Liek Rock, Good R & B, Gospel/Hip
Hop has to be warm and Phatt to sound it's best.

For Me: Hard to do (ITB) with Nuendo/SX..Easy to do with Paris..Best with
(any DAW) stemmed out to a Analog Mixer. Let's face face it, for Rock and
R&B, third order distortion (harmonics) are in order. Somehow Paris and Apogee
adds the second and third order (Harmonics).. Prism, Myteks,RME and the like
don't and that's cool for Post, Film/video work..

But, Rock, R&B and the liek needs to be phatt ..Needs some color, needs some
Distortion..

>Hey DJ. I started to ge that Glue sound when I purchaed the Waves SSL & URS
plugins.

Before that I struggled to get that "glue". But, for starters, all I have
to do is strap the Waves SSL Bus Compressor on the master fader..Boom..Insant
tightness..

Then on the tracks, i either go with the SSL channel or URS channles (API,
LA2a)..

Charles Dyes DVD (Mix it like a Record) talks about how to use analog channel
plugins to to "glue" a mix together. It made a lot a sense.

Still to this day, when I fire up Paris (When I Have a nice \$\$\$) gig)it's
isnstant Magic. Instant smile.. Man what a DAW. I love the power of Nuendo/SX,
even yes Pro Tools, but Paris has that instant radio ready sound as my friends
say.

It's funny, but when we have a really important mix, my partners will say,
hey "Mont" we mix this song on Paris..They can tell the differnce.

>DJ - have you tried Nebula 3? It isn't light on cpu, but it's as close to
analog as I've heard in a plugin. The U-140 plate sounds better than UA's,

and imho, the 747 comp sounds better than anything the UAD-1 has as well.

I'm gonna have to go quad core soon. A preamp instance, 3 bands of EQ, comp and reverb took 30% of my core 2 duo cpu, so you won't get it on every track like the Neve 88. I don't have the Neve plugins to compare Nebula to, but fwiw, it's worth a try for only \$110 or so (80 euro).

Glad to hear Crash didn't do more damage.

Regards,
Dedric

Thanks, but I can get a mix like this one simply by slamming down the limiter threshold a few more db's in Ozone - actually I like the mix overall, it's just the dirt on the mids & above that I don't like - to me it's not a "good" kind of distortion, it's a raspy kind of distortion, and it has nothing to do with fatness or width or anything like that - in fact, IMO it takes away from that. Quite the opposite of what stemming can add.

FYI, Prisms are some of the convertors that mastering guys are using, along with the Lavry Gold's, to slam the shit out of in order to get that extra couple of db's... I've exchanged a series of e-mails with one of the tech support guys at Lavry and he says that the Golds have a certain kind of soft-saturation circuitry that the Blue series doesn't have, and it gives them that characteristic. Apparently some of the Prisms have a similar kinda thing goin' on.

>But, Rock, R&B and the liek needs to be phatt ..Needs some
>color, needs some Distortion.

Color, yes, some even-numbered harmonics, perhaps, but i'm still opting for that clarity & dimension up top - to me that's what gives it the sense of space/air/whatever you want to call it...you start dirtying that up & you lose that. I'll find a way to get there... maybe next I'll try 2 or 3 compressors in series, analog ones across the 2-buss; gentle on the first, then hitting each one after that a little bit harder so that you're not having to clamp down the dynamics so much in each stage - maybe that'll get me there with no detectable distortion or loss of depth/space. I really only need a couple

more db's RMS to be 100% competitive in terms of perceived volume levels with something like the tune we're talking about, and that's a fully-mastered cut! If I can do that & still maintain the sonic integrity of what I'm after, then I think i'll be able to deliver a product that's going to be damn hard to find anywhere else.

>Neil"That's not music, that's just a lot of noise." - my mom, 1964

OK, I agree, compositionally and musician-ally, all these songs are interesting. But soundwise, I'm afraid I'm in DeeJ's curmudgeon club. And it's not that I don't like intense rock performances, I do. But to me, this sound is so slick and smooth and lacking dynamics and tonal variety that the intensity is buried in a relentless buzzy blur. I couldn't listen to a whole record of this stuff.

I like the sound of guitar amps turned up really loud, and I think when you distort guitars to the point of a complete buzz, you lose that character. It just sounds electronic.

But it's all a matter of taste, and I'm sure this is an excellent example of this particular sonic formula. It's just not a formula that appeals to me. Variety is the spice of music.

> NeilThe problem with a compressor on the master bus is that it kills the sharp
live transients that give it life. Finis is a great plug in because you can
monitor the Crest Factor (the difference between the peaks and averages)
and you can compress the rhythm section or just the kick, snare and bass
to get the dynamics to a manageable level. A crest factor of 14 is a great
start to finding a mix that is of good dynamic contrast.

If all you do is compress the master bus you can get this but you'll sacrifice
overall life in the mix. Instead, compress the parts that are causing the
problem and just ride the fader on the other parts (like hihat, shakers,
vocals, keyboards). This way you'll have a very tight mix plus a very live
sounding mix (aka Thriller). Just compressing the entire mix may put you
in the proper crest factor (dynamic range) but you can potentially end up
with a lifeless mix. I'm working on a reggae album right now and the raw
recording has a crest of about 24. WAY too dynamic, but using the above
techniques I'm going to reel it in without crushing the whole mix.

JohnHey Deej - I found that this plugin...

<http://www.the29a.org/nickcrow/TubeDriver%20v0.961.zip>

Here's the full page with a screenshot & that link...

<http://www.the29a.org/nickcrow/TubeDriver%20v0.961.zip>

....can get things nice & "glue-y" if you use it judiciously
(and subtly) on your lo-end stuff like bass, kik, etc., or even
a few choice things that have a decent amount of lo-mid
content. Now, I don't have this newest version, but I would
assume it's not gotten any worse than the probably two versions
prior (which is the one I have, but now i'm gonna try this new
one, too!).

I used it on the DiMakina stuff I played for you guys I guess a
couple of months ago, In that case I used it on the kick, bass,

snare, and one stack o' tracks of rhythm guitar in each tune. Definitely try subtle settings, and if you want more glue, don't necessarily turn it up at first, just add it to something else - 'specially for the genre you're working in, since you wouldn't want to get too dirty on anything. IOW, use it mainly for the harmonics, not the drive.

I would start with the Bias in the middle, the Drive at about a third of the way up, and adjust the Volume/Output for unity gain at that point so you can click it in & out of bypass to see if you like it. That'll give you a good starting point, anyway. Cranking up the Bias carves out a countour in the low-mids a bit - maybe kind of a little bit like a Pultec-ish thang, but not exactly - you'll see. This new version has an EQ, too, which the one I have does not, so that's even cooler!

For example, on the mix for "Faith in Love" that you linked us to, I would probably try it on bass, kick, snare/sidestick, and since it's really more of an acoustic guitar-dominant song, I think I might even try something like create a copy of the main acoustic guitar track, and set a lo-pass filter around 600hz on one & a hi-pass around the same place on the other, and use it on the low track. :D

Also, if you have the ride cymbal miced separately, I'd even try it on that track - it can work real well to soften up highs without losing presence (like, for example, if you like the tone of the ride & didn't want to EQ it any differently, but wanted to soften up some of the "ping" attack - knowwhatahmean?). Not that I'm saying you should, but that's about the only thing about this mix that kinda sticks out & bothers me a little bit. I like the mandolin tone a lot, but if you wanted to give that a little more body without changing the overall EQ, that's another thing this plug would be good for.

Try it, you'll like it! It's a great "adhesive additive" lol

Can't remember who pointed me to this plugin the first time, but I know I was someone on this NG, so props go out to whomever it was that posted the info at the time!

NeilCrap - pasted the wrong link for the homepage. Here's the correct one:

<http://www.the29a.org/nickcrow/index.html>

:)

>NeilHey John,

when I insert the SSL Comp on the master buss, I'm going for that SSL sound just like on the real SSL Console. The Plugin SSL comp reacts just like the the real thing. The beauty of the SSL comp is that it does not suck life out of a mix, but rather hold a mix together. It does not fix offending rack levels. You still have to mix, but the SSL Comp keeps a well mixed song tightly knited together. Thus, getign a more aggressive, punchier mix.

Also, the Sonalkis comps have this glueing quality. Overall, the SSL & Faichild comps were used for making a mix sound like a record. they are to be used after you have your mix 90 percent complete..

Hehe!!!!.....well, I listened to the second song this morning and it sounded more like one of Neil's rock mixes to my ears

this is Bluegrass!!!.....well.....sorta'.....if you get rid of the PBass/Ampeg SVT and the drums..... ;o)

Since I'm mastering as I mix here, I gotta' chop a little energy out of it with the Precision EQ to roll off a little the signal hitting the Neve, then thicken it back up with the saturation and drive, then change the threshold settings of that Fairchild and tame it's output into the Limiter.....sheeshyou rock/R&B guys.....what am I gonna do with you anyway????

;o)OK My son is touring with his band and wants me to email him some of the songs he has here in PARIS. So I'm thinking I somehow need to get them to Mp3. Will this work? Bounce to disk as a wav file, use what to convert to Mp3. Thanks Jim"Sarah" <sarahjane@sarahtonin.com> wrote:

PAH! All you curmudgeons... GET WITH IT!!!

lol

Yes.that will work.

;o)Hey Neil
I stumbled on these guys a little while ago. I thought the same thing: "ah,
melody." Definately pop, but its got some 'nards too.
