>Hi Tom,

The right channel isn't passed at all. The output is the left side on both the right and left output (mono over two channels).

The idea I had was you can set the compressed channel's effect send to pre-fader and then mute it. The output of the effe

Posted by [Neil](#) on Tue, 04 Sep 2007 05:35:22 GMT

ct then becomes that channel's output into the mix. The side chain signal can either be muted the same way and not be part of the mix at all, or you can blend it in if you are ducking by using the channel fader as usual.

I had to get creative to make it work with the PARIS mix topology. But, it works!

All the best,

Mike

Hey Sarah - I tried that last night (holding the pick with my middle finger) and it works to some extent, but it changes the pivot point of your wrist, so some things work fine, while others don't work too well at all (picking on the high strings is difficult, for example... I can't keep my hand anchored in the same place on the bridge as I can with using thumb & index finger, so that's something that would have to be adapted to/re-learned.

Anyway, yeah I'm positive overall about it - I mean it's a major annoyance, but like I said it's limited to one area, it's not going to spread, it can't
