I was thinking about posting Deej's Word file or a link to his Word file
about his set up. That shouldn't take up too much space. He has to keep
posting this info about every two months when somebody asks about it.

That's the problem. A new guy won't know where to look, I'm not sure where
to look for stuff sometimes. Maybe a brief on where to look. If there was
a way to pull it all together???

I'd still like to be able to check out what other people have cooked up.
It's like college, you didn't need everything there, but the overall knowledge
helps you out in what ever you do. This my be too hard to do, though.

Anybody have any favorites they like to use?

Thanks,
PeteSounds like Tony has you covered.

You could also go to chuck's page and down loading all of the plugins, the manuals should be in the zip files. As for how to use them, you might want to search the paris archives using a news group reader. Kim might be able to tell you how to do that. This is kind of what I'm talking about in another post when I'm talking about "How to cook in Paris with Paris recipes". I think this would help all of us.

Chuck's plugins are at: www.greatidea.com/downloads/

Tony also has some mod pack presets posted here:
www.mercysakes.com/paris/vault

Hope this helps

James

Thanx for the input I will give it a go and see what I can come up with.I hope someone can help
me with this same lock up issue. I have just switched
over my Paris system to a new PC. It is an AMD 3800 dual core processor on
an ASUS MB. I have only Paris loaded on it so far. I have loaded the XP drivers
and effects subsystem. I still run Paris 2.2. I had no problems with my previous
PC runing on XP other than it was slow. Now I get the same symptoms as Wayne
did on this new system. Paris just locks up. I have tried following all of
the tweaks and still no luck. Does anyone else have an other ideas?

Thanks

-Got mine in Dec 97 I think..

Seems like it came with Software version 1.5

dbHi all,

Have a co-worker who is 'ripping' his album collection to his computer in
a very dodgy way. We went over the gain staging and he needs a good quality
/ low price phono (turntable) pre-amp.

Chuck<http://www.sweetwater.com/store/detail/USBPhonoPlus/>

Will this work?

David.

> ChuckChuck, you might be able to find an old Dynaco on ebay or somewhere. They're
not too expensive and sound pretty damn good too. You can also look for an
older amplifier with a turntable input that also has a preamp output. Some
of them did have such a thing.

with the one with out, A/D on the digital one is only 16bit. The biggest
problem is the turn table not being grounded. No ground, no good sound.

 Found it!

Samplitude is a DAW that started as a pure mastering solution and evolved into a full blown DAW for audio no midi to speak of. It is the most transparent DAW I have heard (Nuendo, Sonar, PARIS, Cubase, Pro Tools) which means I really don't like to mix in it because I don't have the best front end equipment so I need something to pretty things up a bit, I tested them all on the same speakers and found Samplitude to be the cleanest it just doesn't color the tones or at least in a way that I disapproved of anyway like the others.

What I like the most is I can brighten my PARIS mixes up just enough to make them stand up and out. PARIS is a true analog sounding DAW IMO in that it smears things like analog tape and with mixes being done mostly in digital realm these days that makes it sound like it has a blanket over it to the average joe. (That analogy comes from people that hear my first CD that was mixed and mastered in PARIS great sounding stuff they say it just sounds kind of muffled, it left it sounding too analog compared to what is out there and even I have acclimated to the point that I agree.)So I looked or listened for a way to master and give me some control over that. Because no matter how much I tweaked PARIS during mastering I couldn't get it to stop smearing things, which is not bad to some degree and is what I want PARIS to do when I'm mixing.

So I demoed all of the for mentioned DAWS doing a remaster of one song from the first CD to see which would do what I wanted and still leave most of the PARIS magic and settled on Samplitude because "it just sounds better" ;). It gave me the results I was looking for from the

song. I posted the remix to some folk that pointed it out before and they all agreed that what I did "fixed" it.

Samplitude is made by Magix and here it is

<http://site.magix.net/english-us/home/professional/samplitude-v8-professional/?version=everest>

You will want to not use the MEC to monitor just get an M-Audio or Creative card or something to monitor Samplitude for mastering. To me this makes the most sense anyway because most the people hearing your music will listen on this type of converter anyhow and not PARIS. Since Dave pointed you to swampwater sound, I guess I'll do the same. Check this one out. <http://www.sweetwater.com/store/detail/DeeJayPre/>

don't get the USB one, it's only 16bit.

The one listed on page 326 of their catalog is more square, and comes with a RIAA EQ. It's called the DeeJayPRE I

If you go the old hi-fi amp route, see if you can get your hands on a Leak
amp. You may not find one for 50 bucks, but after the transfers you'll
have a lush stereo power amp to keep and enjoy.

Cheers,
Stewart.

update last night, adding the meta tags and

making a minor text change. I've also resubmitted to google, as well as yahoo/altavista, so hopefully I'll get scanned again in the next few days.

I'll be making some more major changes in the next few weeks. With any luck the added meta tags, along with a couple of site updates, might nudge us up the list.

I'll try and remember to check the rankings a month or so a

fter that's done,
and see what influence it has.

I'm actually thinking that, as far as modifying the pages goes, maybe I wont have to do that, given that the actual newsgroup has a web component, which obviously changes constantly. Hence the pages I link to have constant updates, even if the front page does not. How related the content on the group is to Paris of course is up for question. ;o)

Cheers,
Kim.

>What's up 'dog! (Sorry, couldn't resist)

I bought the GCS632U 2-port USB model for my Macs and the GCS612A for the PCs. I really wanted to buy the GCS1744 4-port but it cost \$155 and I got the other two on sale at Fry's for about \$80 after rebates.

It's much cheaper if you're only switching PCs as the PS/2 models cost less than the USBs. I could have also saved a couple of bucks by not getting the audio-switching feature but figured I'd regret it later.

I've been using them every day with no problems so it looks like they're an excellent solution.

Hope this helps!

Mark

nts at my domain paris.hiddenounds.com, which in turn points at my server, hence both go to the newsgroup's website if you put the in a browser. I think part of the reason for this arrangement was that [parisfaqs](http://parisfaqs.com) became the default fallback Paris site while the newsgroup changeover was occuring.

It seems that google doesn't particularly like what Doug's done though, as www.parisnewsgroup.com doesn't even show on any of the searches I did. Kind of a waste of a good URL really.

But it's Doug's domain so it's up to him.

Cheers,
Kim.

"Aaron Allen" <nospam@not_here.dude> wrote in message =
news:4429d595\$1@linux...

As I near the time when I'm going to have my ole' Interceptor painted, =
I'm having some trouble deciding where I want to land. Thus, a little =
play in Photoshop and some polling of thoughts from the Paris think tank =
are in order - what could be mo' fun?=20

Things I'm looking at the top of the list are:

Upkeep (for instance, black looks great but always needs cleaning =
and pre-paint flaws are tough to fix)

Visibility. Color is no good if it's mixed with my broken body =
under a pickup cause they "didn't see" me.

Cool factor. Let's face it, chicks dont dig ugly bikes or dudes on =
them. (yes, I realize this ain't no Harley!)

Up until now it's been nothing more than a daily driver, but I think I =

may want to push a little fun on that now that the weather is more =
forgiving. I have a buddy with a nice paint shop out in the sticks =
that's offered to shoot the paint for a 6 pack of import. Can't imagine =
not taking him up on that one.=20

There's a service called yousendit which allows sending of files up to 1 gig in size using an email address. Not sure how it works. I imagine it sends a url for the receiver to then download from. Assuming your connection is quick I'm sure someone can shoot them to you this way. We may have to start a thread...

Cheers,

Kim.

>Hey guys! I use AOL Instant Messaging (AIM) for shooting somebody a large
file. It's free. it's faster and it works. It is a lot faster than Email.
I have also used Skype, it works too, but it seems a little slower. Both
will work with Mac or PC. It's kind of like having a net work connection
over the internet. With AIM, you can have a direction connection for privacy,
this connects the two computers directly. It's like a secret that nobody
knows about, I say give it a try, and you'll see what I'm talking about.

Google, Yahoo, MSN all have free IM software, but try AIM first.

 ><http://www.polesoft.com/refer.html>
 >
 >Ted,

There was a thread a few weeks back talking about the possibility of running windows with a switch in a config file (don't remember which) which adjusted the way the dual processor worked, and it seemed to show promise. There were two switches. One turned the second core off, which would reduce power (but you could have multiple boots so other apps could still use the second core), and the other option switched the processor usage so that any single application would only use a single processor, hence Paris would run under one of the

processors, but Windows itself could make use of the other, or other apps you were running (eg if you had Cubase running as well, or Wavelab).

It seemed to show promise. I expect you'll be able to get things working if you can find the thread. ;o) You'll lose some power, but I'm guessing you don't need all that power for Paris anyhow.

Cheers,
Kim.

Excellent. Saved it. Gonna print it and put it up in the studio.

The girlfriend will definately get it: men are pretty simple.

MR

(Although, I might Photoshop it and put the "man" section on the bottom -closer to reality.)

 >Doesn't seem to matter whether the ASIO direct monitoring is on or off in
 totalmix and what's really wierd is it doesn't seem to matter whether or not
 Cubase SX is even timeline synced. Apparently, it's seeing the incoming
 audio (and I would assume the clock associated with it) and the PDC in SX is
 automatically playing the audio ahead in time by the amount of delay it's
 automatically compensating. I know this sounds impossible, but it seems to
 be happening.....errrr.....well it actually *is happening. I just
 checked it by processing a pair of kic tracks trrough a pair of 1176's and
 recorded the returns to a stereoi pair of Paris tracks. Placing them side by
 side, they are exactly lined up on the timeline and the only reason they
 won't phase cancel is because the processed tracks are now louder, having
 been processed by the 1176's.

This is so strange.....I think I may need to go to sleep and wake up in
 the morning and see if this was some kind of hallucination.
