Now I think we should argue about which is the better stellar nursery... that one in the link above, or the one in the Triffid Nebula?

The youngest, Olaf (57) get
heart attack when visiting Egypt with his bouzouki and guitar. He loved to
study folkmusic around the world. Benny got max four months to live with
cancer in an age of 70, but he just got 3. I was producer on his last 6
productions, 5 of them on Paris.
Plenty of things we didn't get done with the music together, things we had
planned.
I know there will allways be friends and familymembers that will help with
anything, if they can.

Take care with a fresh mind.

Respect
Erling

(Or as I call 'em... "rectumfriers").
<http://www.chipdocs.com/datasheets/datasheet-pdf/RECTR/RS201.html>
It's actually not one diode, but four, prewired to convert AC into
DC. (Usually followed by some hefty electrolytic capacitors.
(Oh yeah..... yanks call those "condensers".
My guess is that there was something else that caused this to blow.
If I were to replace this, I would put a larger capacity
equivalent in it's place. (just get the + & - right, the ~ refers
to the AC input, so it don't matter.)
Stick a 4 amp, 100V unit in it's place, and you'll be right.
THEN, find out what caused it to blow.
