>Hey there,

the only other thing that I would want to add is a remark that I B.
Tankersley made at some point. He said something to extent of him playing
around with some Native Beta Version of Paris that Edmund had started
developing, and that he had concluded that the ensoniq hardware had much to
do with the great sound of paris. I'm pretty sure that I remember this
accurately, but I am not about to swear by this !!!

o get a sense of the difference between the Paris EQ, the Waves
RenEQ and this bad boy ...
Any adjectives you would be able to share in this matter would be greatly
appreciated.

Thanks,

Greetings :)

Siwei Zou (Soo-Way) the founder of SE Mics has been hard at work in
the Lab. This time , its all about Ribbons.

As many of you may be aware - Ribbon mics have a very different response
than conventional condenser mics. As a result , Ribbons capture sounds
in a very different way . Many engineers and producers use Ribbon mics
on guitar amps, brass instruments , string overheads and a variety of
situations where High Frequencies tend to be to brittle using
conventional mics. Distorted guitar is one of the best examples. Quite

often one tends to EQ the heck out of the track causing untold Phase damage rendering it unable to sit well in any mix. Using a Ribbon is perfect in this situation, the mic captures the sound naturally - thus allowing the guitar to sit perfectly well in the mix without any nastiness or brittle high end trash that one usually expects.

A brief overview of Ribbons - RCA was known for developing some of the most popular Ribbon Mics the RCA 77DX and RCA 74B.

The vintage ribbon mics are Dynamic and use a 6 micron membrane, and there are a number of low end mics that also use 6 micron. Developments in the last 10

years have allowed thinner diaphragms to be practical to produce and the newer more expensive ribbon mics have diaphragms ranging from 3 microns to 1.8 (about the current limit). The thinner diaphragms offer better impedance matching and superior high frequency response. The inexpensive Ribbon mics often to have a higher impedance which this does tends to make them low in output, a significant drop off in High Frequency, a bit noisy and quite sensitive to cable length and load from a preamp. Finding an optimal combination can be a challenge.

The most popu

lar Ribbon mic presently has been the Royer 2.5 Micron membrane Model R-121.

We have measured the impedance to be @ 470 ohms (as opposed to the published 300 Ohms)

These mics sell for Approx \$1200 each

http://www.royerlabs.com/r_121.html

SE has used Royer among many others as a benchmark. In doing so, They started out with a

6 micron Membrane Dynamic with the Clear goal of doing everything Better than the rest.

Better High Frequency response, Higher output, Lower noise and Lower impedance - 200 Ohms to be precise.

I Have Wave files recorded of the 6 micron prototype and 2 micron final production model that I can email and or post.

SE managed to completely knock the Ball out of the park with this. And in doing so , they have perfected the process of making Ribbon Membranes better than any competitor. More on this amazing new process to follow.

They did not stop here , Even through they got the 6 micron to have very good performance they decided utilizing the 2 micron ribbon just put the performance over the top and went with it for this new amazing mic.

The All New SE R-1 completely smokes the Royer as well as all others and here is the best part.

At half the price !!

The New SE has a list price of \$ 749 and streets out @ \$ 599

The special (St. Peter) PARIS Pre-Launch group buy is \$ 568.88

Included with this mic is a Planet waves Premium 20ft Mic Cable, Deluxe Road case and shockmount.

We will be able to deliver these in the first week of October - Reserve yours NOW !

As with all SE mics - there is a 7 day NO RISK full refund Guarantee !!

These Mics will Premier @ AES in a few weeks - My prediction is these R-1's will be one of the Hottest Items at the Show. You heard it here FIRST !
