-----=_NextPart_000_0017_01C86333.06D651D0--we had to resurrect an old job today (first of a few) and although it meant i had to dig a very old g4 out of storage then install os9 on one disk and osx on the other it was lovely to see paris all over again. i miss the simple things (like zero latency monitoring).

*sniff*But then you miss out on that special burning silicone smell and that nice little crackling noise the components make whey they go to computer heaven!

Oh no, Paris will definately remain. I still have a spare EDS card and spare
computers -just for Paris. I'll probably keep it's wheels spinning with
acoustic stuff, and stem mixing.

Still, the free stuff is getting pretty slick these days. Not good for content
creators, esp on the audio side (video and 3D design are way ahead on free
software platforms), but for just a general surf and mail OS I'll take Debian
or Ubuntu over OS X or Vista or XP any day.

Annoyed me at v 7.0 that only one screen worked, which was a weird one given
how much other cool stuff it DID have. That's fixed in 7.1

I think there will be Linux on a machine at my place for quite a while starting
about now. Not sure Vista is going to get a look in on my watch.

Cheers,
Kim.

Now he's endorsing his wife. I wonder what she's promised him? You don't get something for nothing with Bubba.hi martin

yes, things are going pretty well here. two studios running with nuendo4. going to upgrade to mac pros this summer, just waiting for the leopard dust to settle.

it was funny yesterday running an audio app and an operating system very responsively on a machine with 128mb of ram. it just seems almost unthinkable now.

what **was** very interesting was that the new intdevices site (was getting the email address for a authorisation response) shows that they have some audio stuff 'coming soon'.

how are things with you?<http://au.youtube.com/watch?v=ZXcsM8MuDRY>

He and the late Danny Gatton have a cd out that is amazing.

The title escapes me at the moment.

dbGNU/Linux distros have to make some choices about how they deal with proprietary drivers. Some of the more strict ones (most notably, Debian itself) simply makes you figure it out yourself. Some (SuSE, Mandrivia) kind of nod and wink and give helpful suggestions or offer to install drivers for you. Ubuntu actually has the drivers packaged and ready to go, just tick a box in the right control panel and you're off using the nVidia or ATI binaries.

In an ideal world the video card companies would publish specs and not enforce NDAs on free software developers, that's what Intel and most of the mobo manufacturers do, as well as pretty much all of the hardware vendors in the enterprise space. For now, Ubuntu is the best option if you don't want to learn how to manage stuff like this on your own.

It's a big step, imho.

I took a chance on a 1x Nvidia geforce 7300GT in the hope of
running four monitors without using any PCI slots in my
Cubase box, and it works a treat alongside my Nvidia PCI_E 16x card.
As far as I know, 1x cards are rare, but I found one mob in the UK, selling
them on
Ebay for around AU\$100 delivered.<http://www.cs.vu.nl/~ast/reliable-os/>

Just as an FYI. Linux and XP are monolithic, OS X is micro. I still think
it's a question of tradeoffs, but in case anyone wants to find out the difference.

TCB

P.S. And no, I'm such a dweeb that I've ever downloaded MINIX, though I've thought about it. Wow.....amazing.....!!!!

<forehead slap>

dbHi Everyone,

I started doodling with Paris again after listening to my buddy's CD that was created entirely in Paris. Of course it was a relatively fresh install so there were some issues. Generally speaking I don't think I have the settings right for my system. It goes between the standard "your system isn't fast enough"Hi Everyone,

I started doodling with Paris again after listening to my buddy's CD that was created entirely in Paris. Of course it was a relatively fresh install so there were some issues. Generally speaking I don't think I have the settings right for my system. It goes between the standard "your system isn't fast enough" (not exact message) to "is your hard drive winding down"

Besides getting my system up to speed, I'm wondering if I should consider moving into the 20th century and getting a new platform that is still being supported.

My needs are simple enough. It is strictly for my own personal use and I don't need a ton of tracks (32 is fine). I also don't do anything with MIDI and don't really care to. I would like to be able to use UAD plugins without latency issues and have a machine that is easy to use.

I've been out of it for years, but I do scan the newsgroup from time to time and it sounds like people have left Paris completely or are using it in some peripherhal capacity.

I followed the instructions from the parisfaqs.com website when I did the original install but it doesn't really give instructions on which configuration to use. Also, it seems like I can build a mix, but then when I reopen the file it has problems.

Anyway, any insight on any of the above issues would be greatly appreciated. I like the sound Paris makes so I'm not dissatisfied there. Also, could you include the latest prices on any of the new proposed software. Currently, I'm running a P2.4 with 1gb of ram.

Thanks as always

BarryHi Thad,

We will have it in stock in 1 1/2 to 2 weeks. No confirmed street price yet. I should know in th next couple of days on the price.

ADK Pro Audio
(859) 635-5762
www.adkproaudio.com

chrisl@adkproaudio.com1. The options that it offers are nothing short of amazing

2. The sound quality can be very very good when properly gainstaged.

3. Low latency monitoring is possible, thought the more money you throw at it, the more "possible" it really is in a practical way.

4. The ability to use higher sample rates is no big deal to me. I did it for a while. I really don't use them much any more.

5. I'm discovering that Paris was easier to use and sounded better with fewer options. Yeah, bus compression is nice, but what bus compression gets you in native, Paris gets you without needing bus compression and if you do need bus compression in Paris, you can bounce down to a stereo pair and compress the tracks (a type of parallel compression). No matter how much I try to like RME Totalmix, it's just cumbersome and sucks. Creamware was much better as far as I/O interface is concerned on a native platform.

6. VSTi drums will never make me happy....no matter what....never in a million years.

7. The deal killer for me with Paris was lack of delay compensation, but I have added enough outboard crap to my rig by now that I could probably lose the UAD-1 stuff that I like so much and have invested a fortune in. Analog hardware, Paris DSP and low latency VST plugs would likely float my boat now that I have had a healthy dose of "the other side". I would keep a 2nd comp on the side to stream VSTi's in real time, recording them as audio and I'd probably be just as happy....of course, then I lose recall (sigh)

There really is no perfect world these days for what I want to do.....I guess there really never has been, has there?

;o}Deej, I'm sending my Paris mixes through my BA 312's via Avedis' line pads into my Drawmer 1968 and I really dig the depth I am getting.

I would say the 1968 is a tad mushy and warm.. But I think it really is worth the round trip.

It's all about the chase, not the conquest...

DCScott,

I'm just too invested in what I've got going on here to go back to using Paris. I made a decision to move on and I'm going to stick with it. Part of that decision was based on the presumption that I would really need the ability to work at higher sample rates. another assumption was that I would want to use midi tracks to trigger VSTi's. Neither assumption has really proven itself to have been really necessary. I am starting to get a bit of post work here and Cubase is pretty handy for working with video.

a belligerent
undercurrent. No one likes an angry Bill Clinton, it seems. It seems to
me the closest he has come to honesty, though.

Not to defend it, but it must be a little hard to support your wife's
going after the job you once held and would surely love to have back.

This is Zan, right? Do you still sell your DADGAD book? I've been using that
tuning with a capo on some distorted electric guitar parts. REALLY cool,
was thinking I should dig a little deeper.

No need to apologize. Questions are good, propaganda is bad.

The Christian religion can be described in many ways. Some would say the Catholic church, others the crusaders, others some great saint or leader. To me, it is composed of those who follow Jesus and are first saved and committed to him, and then through that power and his example, live as he lived, as much as possible.

This is the great and invisible Christian church. It is invisible because it does not have a name, other than Christian, and does not have an office building. It is the saved in Christ.

Not a one of us was in that film, yet it claims to attack "Christianity", It misses badly, and in doing so exposes who is the author of this hate.

Ask all the questions you like, but ask them, not of straw men put forward as archetypes, but of those who follow Christ.

DCUm, yeah, that's called a compressor/limiter. But seriously, the only solution I know is to set the levels in the plugs so they match and then a/b them. It would be handy if something did it automatically.

>to "one who gives light" or 'teacher') in the history of our contemporary

>world. I worry more about what people have done (and continue to do) in
Jesus'

>name.

You reduce Jesus to a nice teacher, and then worry more about the
actions of his "followers" than you do about the enemy of souls...

Here is who Jesus is: (from the book of John)

In the beginning was the Word, and the Word was with God, and
the Word was God. He was with God in the beginning.

Through him all things were made; without him nothing was made
that has been made. In him was life, and that life was the light of men.

The light shines in the darkness, but the darkness has not understood it.

He was in the world, and though the world was made through him, the
world did not recognize him. He came to that which was his own, but
his own did not receive him. Yet to all who received him, to those who believed
in his name, he gave the right to become children of God
children born not of natural descent, nor of human decision or a
husband's will, but born of God.

The Word became flesh and made his dwelling among us.
We have seen his glory, the glory of the One and Only, who
came from the Father, full of grace and truth.

Now, this is either a lie and a cruel joke, or it is true. If it is a lie, then Jesus is a fraud and a criminal, not a good teacher, and he deserved what he got. If it is true, then that film was inspired by the enemy of souls.

For yourself, you decide. I know where I come down on this.

>However, I had never heard about the demolition theories of 9/11 or
>the international banker cabal stuff. If half of it is true it's pretty
>disturbing. Even if 10% of it is true!

But how would you know? It's a hall of mirrors and paranoia...

DCDamn those krauts and their fancy Euro! The weak dollar is a drag for things produced overseas but actually helps keep some Americans working so I won't complain too much. I make enough so an expensive laptop audio interface isn't going to sink me.

It may just be genetic. These big dogs are so hybrid that they get tweaky sometimes. this occasionally happens in lots of purebreds, especially the larger ones. English mastiffs can be prone to it as well.

>Hey all,

I'm going on my yearly two week vacation soon. Most people take a digital camera and take a million snaps. I'll do that for sure but I'm an almost uniquely bad photographer. So, I thought to myself, why not document my trip with sound, something I _do_ understand. I'm hoping to get an M-Audio microtrack II. It comes with a simple electret stereo mic, like a lavalier. It also has TRS inputs with phantom power. If I were to pick a mic out of my current 'cabinet' for mono remote recording that would be better than the electret it would be a Rode NT-5. Remember. portability here matters a lot. Any other ideas for a very small, very portable mic for location recording? Suggestions for a handheld hard disc recorder if there is one superior to the microtrack II are also welcome.

Thanks,

Don, read the bible. I would recommend an easy to read version based on the King James Bible. This way, you can come to your own conclusions, besides, it's the number one selling book in the world. I would think it would be logical to read the number one selling book in the world to see for yourself what all the buzz is about. If you read it, you will find something in there for you.

James

Here's a link to a little post project we did here recently.

<http://www.mediafire.com/?40yn5bcy4t>

The narrative was recorded with an Edirol R-09.

<http://www.edirol.net/products/en/R-09/>

I highly recommend this box. It's the size of a pack of cigarettes and the audio quality is excellent with the built in stereo mic. It can also record lo-rez and in mono with a mono mic using a minijack.

It really is just about the perfect low maintenance, high quality, multiformat self contained stereo field recorder unless you wan to go above the \$1k pricepoint.

I guess the thing that disturbs me is that some people feel the need to brand anyone who questions the many similarities between the Jesus Christ and other Ancient Deities a heretic, a blasphemer or a proponent of the Devil.

If I'm not mistaken there is a fair amount historical evidence that these similarities do exist and therefore it is fair to ask the question...is Jesus Christ the Son of God or is he just the latest version in a line of Deities that are based in ancient pagan worship.

DonYou could "kinda" do it automatically... just set the relative volume levels to match, as you said, and then automate the "bypass" function on the insert/plugin.

Sit back, listen, & enjoy your automated a/b.

Neil

[http://www.pcguide.com/byop/byop_ConnectingOtherThinWireConn ectors.html](http://www.pcguide.com/byop/byop_ConnectingOtherThinWireConn%20ectors.html)If I'm dinking
around setting relative volume levels then I'm not listening.

I can easily overdrive a compressor and get volume level changes out of
it so that won't work either. Basically some AGC VST is what I need. hmmmmmmWell put DC and
James.

friend decided I could use better than
he could, so I've been playing around with it.

Also about the size of a pack of cigarettes (I think - never got that close
to a pack of cigarettes...) and even cheaper than the edirol. Also functions
as an audio in. Also records on 4 discrete tracks. Loads audio onto SD chips.
Functions as a travel drive.

Has two quite decent mics hardwired into it in a stereo-X config and also
takes 2 1/4" and/or XLRs.

we live in a time of miraculous toys.

>I knew I'd be sorry for opening this can of worms! It's not the first part of the Zeitgeist movie that concerns me but that's probably because I'm not a Christian. I hope you all can forgive me. I know God does. I believe that God loves us all, no matter what we do or what we believe. I believe that the hand of God has been at work in all the great religious scriptures - from the Bhagavad Gita to the Koran to the many versions of the Bible. However i believe that all those books are the work of men (and maybe some women) and as such reflect their beliefs, opinions and agendas. And I take grave exception to anyone who believes that their Truth is more true than mine.

Anyway I think it's a shame that the Zeitgeist guys thought it best to lead with their section about Christianity. It seems to have almost guaranteed that many Christians would stop watching and never see the second and third parts, which are the ones that most got me wondering about what really happened and what's really going on.

James (and others) I've got to say that in the face of historical evidence I truly admire your faith. The fact that one can draw a direct correlation between Jesus Christ and Deities from thousands of years before Christ (as well as other bible stories) is of no consequence because you see the bible as the Word of God. That is a commendable and wonderful thing, but please do not confuse historical facts with propaganda or being persecuted.

The truth will stand up in the light of scrutiny.

And I am in no way suggesting that just because there are these interesting coincidences between Jesus and other so called Deities that Jesus Christ is not the Son of God. I just think that these coincidences along with the fact that at the time that the Deification of Christ was finally recognized as "the truth" by the Nicene Council the Christian religion was so fractured that it needed a single unifying theory (pun intended) to keep it alive and that makes me wonder about the validity of the Bible as the "Word of God" as opposed to a Council of Men.

Actually the 911 stuff, the international banking community stuff, the
military industrial complex stuff and little green alien stuff has been
circulating around for a few years now.

The main difference between those conspiracy theories and the Christian
religion is there is history, documented evidence etc etc etc. to back up
the "propoganda" It's help and advice like this that keeps me coming back to this forum

Oh yea - that and I still use Paris

:~)

thanks

Digital Media is proposing a rate of 4.1 %

i.e. \$0.04 USD per digital download

ya think we'd at least get a kiss before...Faith is like trust, it's not always 100%, but you either have it or you don't.

It's easy to put things together and come to the wrong conclusion, especially if that's somebody's intention. They talk about light and darkness. They talk about the mother of Jesus name starting with an M. You can't explain Christianity with astrology. You could say that women's names back in those days started with an M because M names are a derivative of the name Mother. You could say that the name Daughter is from the word Dawn which means new beginning and there for... bla bla bla. You can twist things around and say this means this, and this means that, because bla bla bla. I suggest you guys do a little research on all of these claims that all of religious figures, all had mothers that were virgins and their name started with the letter M, instead of taking their word for it. I suggest that those that don't believe, read the bible for themselves a few times and decide for themselves.

I'm not very good at this but I will try to explain the concept of light and darkness. Darkness denies the truth. In total darkness there is no truth. The light is the truth. If you were blind folded and taken in to a room that was void of light, you would not know the truth. If you were sitting at a table, you would not be able to tell me what is on the table, or how big the room is. You would not know if the room was full of king cobras or not. With light, you can see the truth. Being in darkness is void of the truth. Being in darkness is ignorance of the truth. The truth is the light. To deny the truth is to be in darkness. When people deny the truth, it's because they are in darkness and can't see the truth. Many want to keep you in the dark. many will twist the truth to deceive you and keep you in the dark.

God is the truth and the light. It's easy for people to knock something they don't really know about, especially if they've only heard half the story. You don't have to take my word for it, go seek the truth and read the bible for your self and you decide.

And 0% on streaming media, which is likely to be the future that replaces CDs and even downloads. It's amazing how DiMA and even the RIAA are simply ignoring the simple fact that without motivation to sell content, there are no content creators. "Fame" is of no use in a billion-song download market (needle in a haystack) when there is no "fortune" to accompany it.

They are sadly mistaken if they think writers and artists are going to practically give their art away just so distributors can make a mint on it.

If the industry doesn't want creative professionals, then a new industry will simply replace it. I already have an idea along those lines....There is a *recording artists safety guide to the beach* floating about somewhere that pretty well sums this up. You might see if it's reachable on google. Warning: Adult language... which is why I won't post it here.

>It all depends on what is authoritative to you.

If you assume that there cannot be miracles, that the natural world is all there is, then you study Jesus and the Bible as historical documents, no more important than any other.

If, however, you decide it is impossible for intelligence to self generate (you code guys should know about this) and we are walking repositories of clearly specified intelligence in our genes and minds, then there had to be some input to the system from outside.

Given that fact, and I think it is a fact, we give credence to the histories of Socrates, Aristotle, and Plato, and they existed hundreds of years before Jesus. We study them and appreciate them as historical fact and as philosophical influences, in short, as real people, yet the atheists wish us to believe that Jesus was a fairy tale. Well hang on, because it is very unlikely that Jesus was a fairy tale, and worse, there is no possible explanation for the lives of self-sacrifice and the gruesome deaths of the apostles and followers of Jesus because of their unwavering convictions, than something abso-fuggin-lutely huge happened in their lives to change them, and the world forever. Jesus, was what happened; the real Jesus, not the metaphor Jesus, not the ghandi-buddha-krishna-MLK-good rabbi Jesus, but Jesus Christ the Word. Notice please, that I have yet to say a word about the changed lives and miracles that support my faith. They too are real, but they are not even needed to show the reasonableness of believing in Jesus.

If you believe there is more to life than the material, then you really, truly must meet Jesus.

If not, then one viewpoint is as good as another. You try them on like suits and sunglasses until you like the fit.

>DVD has it's own sets/types of formatting..... but if you're going to use a
removable hard drive in say a USB or Firewire case, THAT formatting will
matter (The native/'internal drives really don't matter in that scenario).
Make sure the removable drive stays FAT32.

In fact, you may want to go ahead and start looking at MacOpener or
something similar. I'm not positive about this (and hopefully someone who
does paris PC/MAC stuff more than I have will speak up) but it seems prudent
to start recording in PAF only since that is the only common Mac/PC format?

If no-one says otherwise, just do a little test at 16 and 24 bit to make sure, going both ways and reading both ways. For that matter, you might want to use the network connections to move around data.

>So, how did humans get "saved" before Jesus? We've been around for 40 or 50 or even 60 thousand years now and we have a fair amount of documentable history from the last 10 or 15 thousand. Who "saved" Lord Krishna? Who saved the Buddha? Did they and all their followers go to Hell because Jesus hadn't been born yet? I'm asking a serious question here - one that I don't think your bible can answer. I once asked a born again Christian friend what would happen to a Buddhist who had led a perfect Buddhist life - one of kindness and service to his (or her) fellow man, a life without fault - who had never been exposed to the Word of God as taught by Jesus the Christ? Would he go to Heaven or Hell? My friend replied that in order to enter the Kingdom of Heaven he would have to accept Jesus as his Lord and Saviour. I don't buy that. God has existed forever. Jesus existed 2000 years ago. God has never changed. Only our perceptions have changed. I maintain that the Perfect Buddhist would have gone where we all go - back to God. Call it Heaven if you like. We all go back there. There is no other place to go.

I've never read the New Testament. Maybe someday I will. I have, however read much of the Torah, which is what we Jews call the Old Testament. I don't much agree with the parts that discuss who and how we can own other people as slaves or how much I can sell my daughter for or why I should stone someone to death who does work on the Sabbath. The Torah is allegedly the Word Of God too, isn't it? Jesus was a Jew. What do you suppose he believed?

I've read a bit about the history of the Old Testament. It's interesting to see how and when the stories were organized into the form we now know it. It's also interesting to read the theories about who wrote the stories and what their social/political reasons might have been. Why would the writing of the New Testament be significantly different? And why should I accept any of these writings as the literal, pure and true Word Of God? You can argue faith and I accept that. Can you accept that my faith in God doesn't need a saviour named Jesus? And that I can accept the fact of Jesus' existance and the importance of his teachings without needing to believe that he was the son of God?

Man! My apologies to everyone here! I started this thread to discuss 9-11 conspiracy theories and international banker cabals! Honest! I'm even willing to throw a few Alien Invasion theories into the mix!

Peace,

Gantt

>Wow, I found that kind of hard to stop watching, but I have stuff to do.
I'll have to watch it in sections. I made it to the 30 minute mark, then I
had to get busy.

I will say that so far I already knew about a lot of the parallel "Son of
God" myths from both my History of Western Civilisation classes, and,
amazingly, my New Testament class. But I've never seen the pagan and
astrological parallels presented in such detail. It's fascinating, and I
wish I had the time to check out all the sources listed, but alas, there are
only so many hours in a life.

I know it upsets believers to no end, and I'm sorry, but yes, there have
been other legends of virgin-birthed saviours and their resurrections for
thousands of years before the Christian one. And again, I'm sorry, but
telling someone to "read the Bible" is not going to answer any questions
about the history of it's construction, or the possible earlier outside
influences on it's content.

In case you didn't know, the narration behind the little animation about the
man in the sky who loves us is from George Carlin at one of his shows in New
York. Clearly not a fan of religion. In fact, he may actually be Satan
himself.

>So, how did humans get "saved" before Jesus?

You as a Jew should know this I think. They looked forward to the plan of salvation's completion, we look back.

The cross is at the center.

>We've been around for 40 or

>50 or even 60 thousand years now and we have a fair amount of documentable

>think your bible can answer.

Yes it can.

John 10:16

And other sheep I have, which are not of this fold: them also I must bring, and they shall hear my voice; and there shall be one fold, and one shepherd.

All who seek the voice of God will find it. The question then is will they follow it?

>I once asked a born again Christian friend

>what would happen to a Buddhist who had led a perfect Buddhist life - one

>the Kingdom of Heaven he would have to accept Jesus as his Lord and Saviour.

> I don't buy that.

Well your buddhist friend doesn't believe in a personal God that may be know, nor do they believe in salvation, so it could not have been a big issue for them.

Personally, I believe that we assent to the presence of God in our lives, not the name of Jesus, like a magic phrase.

Follow that presence, and you will come to the cross eventually if that is God's will. No one goes to hell for not saying the name. Not in my understanding.

>God has existed forever. Jesus existed 2000 years ago.

The Word became flesh and dwelt among us.

> God has never changed. Only our perceptions have changed. I maintain that

I am part Jewish. Read the new Testament sometime.

>I don't much agree with the parts that discuss who and how we can own other

>people as slaves or how much I can sell my daughter for or why I should stone

The concepts of God, may be found there, but it was written by men. I do not believe in word for word inspiration.

>Jesus was a Jew. What do you suppose he believed?

Read the New Testament and see.

> I've read a bit about the history of the Old Testament. It's interesting

Start with reading it. then, if you have specific issues, let's
talk.

>You can
>argue faith and I accept that. Can you accept that my faith in God doesn't
>need a saviour named Jesus?

Already did. It is not my place to consign anyone to hell, but
to point them to the truest expression of God's desire for
us. Jesus.

>And that I can accept the fact of Jesus' existance
>and the importance of his teachings without needing to believe that he was
>the son of God?

Then you reject his teachings.

>Man! My apologies to everyone here! I started this thread to discuss 9-11

Well, there is a lot more substance here isn't there?

At least I think so.

best,

DCWasn't it you who said:

Everybody must get stoned...

Sorry...

Good point. It is 6:17 Sunday evening here... ;o)Gantt, don't be sorry for the can of worms you have opened;-)

As a born in Christian from my start of life, growing up with the bible in hand in my youth, as the only truth, observing what's happening around me with all kind of humans I've met on my way, I can't say I've seen the light in a religious way after over 60 years of living. For me, there's only three truths: The first, when we were born - the last, when the death is coming - the second, in the middle of the first and last, we, the humans are for the most running confused around trying to find the meaning with the curios life. For me, all religions are cultural, human made after million of years with humans speculations and searches for the good life, where new generations growing up, allways want to speculate their own ways over the good and bad things.

Maybe I can cook it down to some small but big things in life to take care of, that seems to work for me:

If you knows how it is to be in love with someone, be sure to love yourself as much as you can love these someones around you. Then you are making good steps to make things good for all around your way.

Just an opinion that I'm living well with:-)

Not George!

:-)The arguments for a 911, Central Banking and Political conspiracies have been quite compelling. The problem is they are based on a little bit of evidence and a whole lot of supposition. On the other hand the similarities between Jesus and other ancient Deities are actually based on historical evidence and that is what makes the Christian religion so vulnerable.

(859) 635-5762 Aargh! I tried interleaving responses but it gets too complicated after awhile.

Anyway, I find it confusing that your faith makes the New Testament the Word of God but the Torah is only the words of men, in spite of the faith of millions of Jews throughout history. I get faith. I know of Jews who survived the concentration camps and kept their faith. I do not get faith that precludes the possibility of others having equally valid spiritual paths that will ultimately lead them back to the same place - God. I know orthodox Jews who feel that way too. Sorry - I pass. I don't believe in satan or hell. I believe in Karma. I believe in right and wrong. And I believe we all go back to God. There is no place else to go. And I resent the fact that many Christians find it necessary to try to convince people like me that we are wrong and they are right. Why can't we all be right? Is this "One Truth" dogma written into the New Testament or is it an interpretation?

Ganttl'm sorry. I'm starting to sound like a fanatic too. I'll try to stop.

So - who do you guys like for the Superbowl?

lots of popcornPart I = Comparative Religion 110. Yes, most religions nick something from
 other, usually local and popular religions. The 'big three' these days come
 from roughly the same place, so will show some similarities. Keep in mind
 there are 850 million Hindus in the world and a billion plus Chinese who
 have no interest in virgin birth or third day resurrction.

Part II = Pretty unconvincing. I'll believe conspiracy explanations that
 make sense, but I don't see the CIA or some other rogue element in the US
 government creating 9/11, mostly because they have shown insufficient operational
 art to manage much simpler operations overseas. For me much more interetsting
 is the publicly available and widely ignored evidence of the US involvement
 in Pakistan and the jihadis against the Soviets, which led _directly_ to
 what we now call al-Queda. The CIA calls it 'blowback,' and that's all it
 was.

<http://www.counterpunch.org/physic11282006.html>

<http://www.counterpunch.org/thermo11282006.html>

<http://www.counterpunch.org/darkfire11282006.html>

Part III = Yes, Woodrow Wilson was a bastard, but someone has to print the
 money and why back it with gold? Let's back our money with wheat, we have
 a hell of a lot more of it than we do gold. 'This bill can be converted into
 one tenth of a bushel of wheat.' Wait, that's what we are doing, we're backing
 our money with the robustness of our economy, be that wheat, cars, software,
 movies, or something else. There are serious problems in the economy and

credit markets right now, and Wall Street is one (but far from the only) party culpable, but I don't see how the gold standard would fix any of this. Yes, FDR wanted us in WW II, and we know now that he provoked Japanese as much as possible. This is old news. Vietnam was a war we lost, because the other side was smarter, more careful, and more savvy. That is, the won and we lost. Then it all just gets weird.

I'm still looking for good advice about portable mics and recorders.

TCB

P.S. Took a lit crit seminar with a Rockefeller at Yale. Not the sharpest knife in the drawer, just sayin.

P.P.S. I really would like good advice for good remote recording gear.

Looking forward to the Bangkok blog. I can fantasize about the tropics while I watch it snow some more. We're starting to reach epic levels here. Even the old timers who like to sit around and talk about the days when it used to "really" snow around here are starting to afford this season some major respect. In areas where it hasn't been plowed, it's almost 3' deep down here in the valley. I'm starting to get sorta' sick of it actually. Too much snow can be expensive. We had our property plowed yesterday to the tune of \$150.00 and today it's already halfway to the levels it was 24 hours ago and it's snowing really hard right now. Here a glimpse of what to expect from Hillary if she gets in. Check out Hillary's plan.

<http://apnews.excite.com/article/20080203/D8UIUU901.html>

>I'm still looking for good advice about portable mics and recorders.
>P.P.S. I really would like good advice for good remote recording gear.

Thadster - sounds like one of those porta-recorders with the built-in stereo mics that the other guys pointed out would be the best way to go, but if you want a separate mic(s), what about the Rode NT-4? I understand it's essentially two NT-5's in a convenient X-Y package.

If you want to go upscale, then I'd highly recommend Earthworks, I have a pair of the TC-30's and they really sound natural, clear... in a word, awesome. They don't have anything in a configuration like the NT-4, though.

>Thad - the Zoom H4 and H2 are nice little recorders. The H4 is the one if
you want to use your own
mics. The H2 does 4 channel surround though, and comes with software to
convert it to 5.1. I know of a
sound design guy using it in Hollywood on big budget films - it's noise
floor apparently isn't amazingly good (no surprise for the price), but
everyone I've heard review it says they are quite happy with the sound
quality, and portability for capturing some live surround fx, etc. I've
used the H4, and even it's built in mics are pretty good for the money.

The Korg MR1 and MR1000 look like great units esp. since they do DSD, though
for quite a bit more money (e.g. more to lose
when traveling).

Regards,
Dedric

There's always the old "If God made us, and God is perfect, surely he meant it to be like this". Apparently He could come and fix it all if He wanted.

Then again sometimes I think we live on the virtual Earth... a filtration and training ground for lost souls. ;o)

Oh, so many questions, so little time. ;o)

Cheers,
Kim. Pretty cool. But I didn't quite follow how it works. The middle spring has a bar in the middle?

I have several trem guitars that could use improvement in staying in tune.

Cheers,
-Jamie

Personally, I do think everyone ought to be insured, but I don't think it should be through employers.

Why should insurance be tied to a job? People change jobs all the time and why should they have to change insurance. What a hassle.

Currently everyone is sort of covered already, but it's in a very inefficient way as emergency room treatment where costs are high, rather than as preventative care where costs are lower. We should be able to improve on this.

Cheers,
-Jamie

Whoa! Never did that. I believe in thought inspiration and the words of men, in both the Torah and the NT.

>I get faith. I know of Jews who
>survived the concentration camps and kept their faith. I do not get faith
>that precludes the possibility of others having equally valid spiritual
paths
>that will ultimately lead them back to the same place - God.

Can I agree that there are many paths, but they are not all equally valid? At least in the sense that some reflect reality more than others?

I think the faithful Hindu child goes to heaven, while think the adult Hindu who encounters Jesus and rejects him perhaps does not.

>I know orthodox
>Jews who feel that way too. Sorry - I pass. I don't believe in satan or

>hell.

I have seen Satan at work. I can't deny it.

>I believe in Karma. I believe in right and wrong. And I believe

>we all go back to God. There is no place else to go. And I resent the fact

>that many Christians find it necessary to try to convince people like me

>that we are wrong and they are right. Why can't we all be right?

What concerns me is the resentment. If you feel you are right, I will take a look, but if I believe myself to be right about this, at least on some fundamental level, while perhaps missing some details, you are angry?

Wow. David Horowitz said: "Look even Christians get to have a religion".

Works for me.

>Is this

>"One Truth" dogma written into the New Testament or is it an interpretation?

From John 14:

Jesus saith unto him, I am the way, the truth, and the life: no man cometh unto the Father, but by me. If ye had known me, ye should have known my Father also: and from henceforth ye know him, and have seen him.

I interpret this to mean that God's spirit is at work in all people, but that spirit, if followed leads to the cross.

I neither condemn others to hell, nor accept that all are equally valid.

Ah, but there's that old free-choice thing.

Of course he could fix it, but it would be the end of us. He prefers we make a choice to follow him and a choice for renewal.

You are tilting at a Christianity of your own construction.

DCI like the Wilkinson trem bridge... simple, floats, stays in tune.

Neil

Well sure, but that does call into question whether he designed my soul, or just my physical being. If he designed my actual soul then he did, in fact, design the way in which I make decisions. If he designed how I make decisions then once again "free choice" is questionable.

>You are tilting at a Christianity of your own construction.

I'd suggest that I have my own beliefs of what does and does not make sense and I am tested Christianity against them.

Cheers,

Kim."Kim" <hiddensounds@hotmail.com> wrote:

But we all have fallen souls. If you are going to discuss Christianity, you must at least represent our views and not assign us views we do not hold.

God gave man free choice, at least to the extent that we could choose not to follow him. Like a marriage, that is the only meaningful love.

If your wife becomes a heroin addict, what would you do to save her?

Have you seen the movie "What Dreams May Come?"

(You would LOVE it. Go rent it)

For God so loved the world, he sent his only begotten Son..

He paid the price to give us the option of redemption. You do see the need for this don't you?

>>You are tilting at a Christianity of your own construction.

>I'd suggest that I have my own beliefs of what does and does not make sense
>and I am tested Christianity against them.

It is not Christianity. It is a straw man.

DC

ps let's stay on general. We have been nice to each other, and will continue in that vein, but let's give the audio folks a break

>Don't worry, Martin, I'm not shy about the fact that I live life a little
faster than most people, and I date my share of (usually Latino) strippers
stateside, but I have zero interest in the pay-for-play scene in Thailand.
This comes not from morals, we all pay for it in one way or another, but
a genuine and deep fear of disease.

One of the great sadnesses on my trips to Thailand is that it is know, quite
justifiably, as the world's brothel. If a westerner looks beyond that, Thais
are just about the most gentle, generous, and wonderful people the world
has ever produced. Soi Cowboy and Patpong are fun for a walk through, but
you'll see me at a meditation lesson well before you'll see me at a go-go
bar.

The odd thing about Thailand is that me, Mr. Atheist himself, finds it renewing
in a way that I can only describe as spiritual. My soul is in better shape
when I come back from Bangkok, where most people have other parts of their
anatomy worked over. Oh well, as long as we all come back happy I guess it's
OK.

Cheers,

TCB

Try this on for size...open letter to the Bali Conference...check the link
to the list of signatories at the borttom of the article

<http://www.nationalpost.com/news/story.html?id=164002>

I can only say that when the world's two top scientists (Hawkins and Dyson)

disagree on this topic you can be damn sure the science of "Climate Change" is far from decided

nuff said...crawling back under my rockNo fair...a snowblower AND a snow plow!

And I thought you were a real man DeeJ

Hire a twelve year old...have some fun watching him suffer while you're warm inside

hehehe

With the amount of money it would cost Canada to adhere to Kyoto for one year we could provide all of Africa with clean safe drinking water for 30 years.

Interview with Tom Harris Director NRSP

<http://www.nrsp.com/Fine>, except that a lot of people are sick through no fault of their own,

including a lot of children at the mercy of their parents' health knowledge and habits. Not to mention, I see people in their 80s in pretty good shape who just quit smoking and/or drinking a few years ago, and exercise and health food fanatics in their 50s with horrible diseases.

The "responsible for one's own condition" theory has some limits.

S

As a kid in Massachusetts, I used to look forward to every snowstorm, because it always meant two things: 1.) great sledding at the hill not far from my house; 2.) Pocket money from shoveling driveways! :D

> The fact that Hilary happens to be the _biggest_ whore for the drug companies
only means she's a bit more savvy extracting money from that part of the
(traditionally Democratic) fund raising base than her opponents. Believe
me, if Obama wins the nomination he'll be taking their checks soon enough.

I'm suspicious of the idea of a nationalized health care system. While I've
experienced two very good ones, one in Japan and one in Germany, both countries
are legendary for being 'cultures of order.' Needless to say, we are not.
I _do_ think there is a need for more people to get access to insurance and,
crucially, preventative care. Both save lots of money in the long run and
if a sensible plan can be put together that will cost me some tax money I
can't say it's such a bad idea, despite my occasional libertarian leanings.

BTW - that was what really scared the bejeesus out of people about Ron Paul.
No prominent politician of either party has any serious problem with mildly
crypto-racist baiting about lazy welfare mothers and everyone using the emergency
room as an insurance plan. What RP was threatening to do was keeping the
noses of Monsanto, Eli-Lilly, and Lockheed-Martin out of the public trough.
That'll get you a couple of grams of lead behind your political ear every
time.

Content-Transfer-Encoding: quoted-printable

Great post Thad. I'm still using SX 2.1 with SX 4.0
sitting in the box. =20

I guess it's time.

Tom

"TCB" <nobody@ishere.com> wrote in message news:47a80931\$1@linux...

Hey all,

Checked out the Steinie demo at East Coast Music Mall last night. I =
briefly

checked out SX 4, didn't see all that much that I cared about, and =
kind of

forgot about it. I've been trying really hard to get deep into Live =
these

days, and didn't really want to work on another app, at a certain =
point I'd

rather just finish a damn song whether it's in Fruity Loops or Pro =
Tools

HD.=20

Anyway, I was wrong. The v.2 =3D> v.3 'upgrade' was trivial, but the =
v.4 is

not. Lots of interesting changes in managing presets, some useful =
editing

tools, some nice tempo matching tricks (way back in the 1890's I got =
my first

music writing gig because I figured out how to get Cubase VST version =
..1

to sync tempo to a piece of audio, it was that hard. Kids these days . =

..

), the external hardware delay compensation, and so on. Also, a nice =
librarian

for audio, video, and MIDI files. None of these individually would =

make it
worth the jump for me (I can manage presets, thank you very much), but =
put
together it looks like a real winner. I _think_ it's a big enough deal =
that
I'll switch when it comes time to mix the Monkies. I'll keep tracking =
in
3.x because that's working fine but I might take the plunge for 4.x.=20

For my own music, Live still really is the way to go. The best app in =
the
world for that 'the computer is just a big sampler' vibe and _their_ 7 =
upgrade
is similarly impressive. For rock'n'roll SX 4 looks like it has =
everything
I would really want from Nuendo and a lot more than SX 3. For =
electronic
blips and bleeps and downsampled/pitchshifted/filtered Thai girls =
saying
'so-wa-dee kra' and making a break out of I'm sticking with Live. Can =
always
ReWire them together if it's necessary.=20

Anyway, long post, sorry. SX 4 =3D> Looks Damn Cool, I was unfair in =
not giving
it a larger workout. Hope it has deep Euphonix Artist control support. =
If
they get the PC thing working on that I think I'm good for a Control + =
3
fader banks, which would seriously rock my world.=20

TCB=20

P.S. Morgan made an interesting point, the marketplace seems to be =
narrowing
down. Apple/Logic, Yamaha/Steinberg, and Sonar in the native space =
with a
few stragglers on other apps (wouldn't know anything about that here). =
PT
v. Nuendo + Yammy digital mixer at the high end and in post. LaMont, I =
think
Nuendo and the 02r96 might be the closest 'middle tier' out there. =
Cheaper
than a big PT plus controller rig or a DM2000, but lots of hardware =
f/x and
software integration. I remember the first 02R as being a head =
crushingly
bad sounding device, every reason to hate digital all mixed up into =

one.

Supposedly they've improved.=20

P.P.S. Now we're getting way OT, but it was funny tonight. Obviously, =
I'm

a tweaker and twiddler to the nth degree sometimes, but a lot of the =
demos

I was sort of like, 'Yeah, you could do all of that very fancy editing =
but

you also could play your goddamn part right.' I think that's coming =
from

actually spending lots of time tracking large, loud instruments for =
the first

time in years. When one of the guys in the Monkees says 'Well, I think =
that

sounds good but maybe not bright enough. We can always EQ it later' =
I'm the

one to say, 'No, let's move the mic a little more on axis or get =
another

mic on it. The better it sounds now the easier it will be to mix =
later.'

Ya know, Alex Chilton managed to make '#1 Record' without unlimited =
undo,

so maybe we can all play our instruments well and sing in tune and =
leave

some rough edges in there so we don't sound like Bon Jovi. Anyway, =
that's

my opinion now for some odd reason, I think playing through Savage and =
Top

Hat amps with a choice of five _really_ nice electric guitars helps =
;-) Once

I'm back in electronica land I'm modulating pitch descend on kick =
drums with

LFOs from the bass patch like I'm supposed to.

I choose Polesoft Lockspam to fight spam, and you?

I don't know what you believe either but I hope you're not seriousWell, I can't speak for James, but the 12 minutes or so I saw of that film were some of the most devilish, hateful, and dishonest propaganda I have ever seen.

Yes, there is a devil, and he makes films (or at least inspires them) sometimes.

Memory serving, that is correct that no matter how you load the cards, it's going to come up adat first always. Also, memory serving, you can set up the patch bay anyway you want, including a reordering of the cards and save that as your template thereby bringing it up the way you want each time you boot if you save that template as 'default project' and stuff it in the same folder where you installed Paris.exe

The shit storm is that film.

Start here:

<http://www.boingboing.net/2007/08/06/jay-kinney-reviews-z.ht ml>

That film is not about facts. There are no facts, only "facts" those being defined as that which serves the goal of the filmmaker.

DCI'd seen that review/critique long before we watched the movie. It seems to me that Jay Kinney doesn't much like the movie but doesn't totally disagree that some of the issues it raises are worth thinking about. The stuff about religion doesn't worry me. I'm a lapsed Jew who occasionally practices Hindu/Buddhist meditation and I have no problems with Jesus. He has become the most famous and influential rabbi (which simply means "teacher") and guru (loosely translates to "one who gives light" or 'teacher') in the history of our contemporary world. I worry more about what people have done (and continue to do) in Jesus' name. However, I had never heard about the demolition theories of 9/11 or the international banker cabal stuff. If half of it is true it's pretty disturbing. Even if 10% of it is true!

>DCI just got some files to mix that came off of 2" 24-track w/ Dolby A NR. The studio that transfered the tracks to digital doesn't have Dolby A so they are un-decoded. Is there a Dolby A plugin available anywhere? I can rent 2 channels of Dolby A to run the tracks thru but it'd be nice (assuming it doesn't cost more than the rental and studio time to decode 22 tracks!) to find a digital solution.

Thanks!

GanttThanks Aaron (& Tom, earlier). Yeah, I do seem to recall the patchbay saved-settings thing, and using it for something or other back when Paris was my only DAW. I'll just use that method - I was just wondering if there was a specific order in which those cards should be loaded, to get it to default to seeing the 8-in's first... IME, getting any hardware to default a certain way is always preferable, since it then

never wants to try & change back to some other configuration if a glitch occurs.

Interesting that the film reviewer really doesn't debunk the facts the film states about the Christian religion

As I said I haven't done any research on this so if I'm totally off base here my apologies.

As for the 911 and Banking stuff...who's to say? One thing's for certain, we'll never know for sure

hehehe

DonI don't know of a Dolby "A" plugin - the only thing I can think of that you might try is a de-noiser plugin of some type, but I have a feeling that might not quite cut it, since you're not really properly decoding the signal (the encoding of which involves some compression & expansion, as well as the noise reduction).

You could try a demo of either of these & see if they'll help:

<http://www.izotope.com/products/audio/rx/>

<http://www.voxengo.com/product/redunoise/>

Really, though, the best way would be to get the original tape & have it dubbed into wav files, with the proper decoding, as I'm sure you know. Make sure you dub duplicates of any vocal tracks WITHOUT the decoding, too, though... that was a popular trick back in the day - playing back vocal tracks without the "A" decoding (or mixing the decoded signal in with the clean, decoded signal); can impart the vocal with some rasp, or "air" or a combination thereof, depending on the singer, how hot the vocal tracks hit the tape, etc.

Can you get the tape? Could the client afford a little bit more budget to get it properly dubbed off? It might be tough finding a studio with a pure "A" system on their 2-inch, but IIRC, Dolby SR can also decode "A", and that's not too hard to find in studios that still have tape... in fact, I can help you there if the client's willing to ship the tape(s) & pay a little bit for the dubbing.

I just got a call from our neighbor. Levi had one more siezure yesterday about 15 minutes after we left the vet's office, before he had a proper amount of meds onboard to stabilize him. Last night.....no more siezures and today he's back to his old self so she's on her way down to pick him up and bring him home. They understand that he may have occasional breakthrough siezures but as the meds are adjusted,they're likely to lessen. Let's hope that is the case anyway. Looks like his monthly medication will only cost around \$30.00 which is affordable for them, and if it's not, it's affordable for us. We've decided to become involved with this situation if asked and to help them out as much as is appropriate. They've got a 9 month old blue female dane who's a real handful and needs some socialization/training so we're gonna start mingling our hounds and getting them familiar with each other. It's going to be a major circus around here occasionally. I'll post some quad dane pandemonium pics when available.

Deej, was the vet able to determine exactly what's wrong with him, or what caused the seizures? Or do they just have him on some kind of generic anti-seizure doggie meds?

Neil

Holy guacamole! Is that normal for this time of year?!?

You got supplies? How are all your animals doing in all that?

Sheez... that's scary. I hope it clears up soon.

Remind me not to ask about those tweeters for another week. ;o(Seems you have far bigger fish to fry...

Cheers,
Kim.

the hounds are indoors with us. We have two other doors we can access that
have covered porches over them and we can get outside that way. We've had
over 18" of snow in the last 24 hours.....and no.....this is not normal.
Not at all....but it was normal for this area until around 1990. Another
thing that used to be normal around here is the spring flooding of the
Animas River valley across the road from us where there is now a golf
course, a bunch of upper 6 figure homes and a shopping center being built.

<http://www.daltonranch.com/>

It will be interesting to see if there is anything left of this come May.

They still don't make a version that has a curvature at all???
You know, you could always get a flat-radius neck from Warmoth -
they make KILLER necks, really good quality (and nice fancy

woods if you want 'em, too)! Well, a 16" radius, actually - which is virtually flat. And they can set the neck up pre-routed & drilled for a Floyd locking nut.

That way you wouldn't have to have high action at all.

> Hey Don, it's true that one of the expected byproducts of global warming
is increased extreme weather events, including winter weather events.
But it's not possible to pin a particular event on global warming until
you review all the data, much later, to account for other variables/cycles.

Hey DeeJ, that's an impressive pile of snow! I haven't seen anything
like that since the big storm of 03 (I think it was) when I was snowed
OUT of my house in Conifer for a week. I was something like 8 feet of
snow. When they finally plowed a one lane channel through the snow past
the end of the driveway, we went back up to see if the place survived.
We had to borrow snow shoes to get over the snow and then dig down to

get to the front door.

That storm was the only one where I had to shovel snow off of the roof. I was very surprised the roof and deck didn't collapse under all that weight.

Stay safe and warm, bro!

Cheers,
-Jamie

>Hi Neil,

The new card is a express34 card which is the replacement for the very old cardbus/PCMCIA slots technology. Totally brand new product and the only people that have made on is Apogee but they are MAC only.

I wouldn't be surprised if they raise their price in the next month or so across the board. Their distributor has been absorbing the exchange rate for almost a year and I don't think they can much longer.

They still manufacturer all their product in Germany (East Germany) which like being made in America cost allot more to do with the pricing.

www.adkproaudio.com

chrisl@adkproaudio.com I'm not sure what the big deal is here. We already pay Medicare and SS taxes out of our paychecks, so what's different about this?

Frankly, we are already paying for these folks when they need health care and end up in the emergency room.

As for the libertarians among us, I'd be happy to have you not participate as long as you sign a release allowing medical care to be denied you when you need it and can't afford it.

Sarcasm aside, this is a big problem. There are millions of folks without coverage, and high costs in part because they don't get treated early in the stage of their afflictions. It is going to take some big changes to make this happen, but a lot of other countries do it and I'm sure we can find a way as well.

;o)

(Durango, Colorado, USA.) Intel Chip Boasts 2 Billion Transistors

<http://apnews.excite.com/article/20080204/D8UJKT000.html> I don't have anything much to say about the movie or this discussion, except to make a small correction or clarification: the Buddha referred to in the movie is not Gautama Buddha, but The Hindu god of Mercury.

Gautama Buddha (the Buddha we usually think of in the west) was very clear in saying he was not a son of god, nor a god at all, but he was a man who had achieved a spiritual peace and enlightenment for himself and he was trying to help other men and women to achieve their own betterment and peace. Neither was he born to a virgin on Dec 25 nor any of the other claimed similarities in the movie.

In reality he was historically the most influential spiritual leader of recorded history, having had his teachings used by a much larger population for a much longer time period than any other, with the effect of a great dissemination of more peaceful civilization. Also, he did not as was mentioned in this NG, offer hope of a heaven or other place, but of an improved existence on Earth in the next reincarnated life. Also he did not say we have souls, but that we ARE souls or spiritual beings (seemingly a small point but clearly significant in practice or application).

Buddha was quite a dude.

They have upped the ante on these babys. I'll dedicate another 250 gig drive
for this lib on the Drum VSTi computer. Some folks in America have a notion that we can afford
anything, but
those days are over. The dollar is dying because financial markets don't
have confidence in a currency that tries to print its way out of
trouble. Now our so-called leaders want to borrow more money to give
everybody a bribe, oops, I mean "tax rebate" to "stimulate the economy".
How about ending the idiotic "war on terror" and using the trillion
dollars we are blowing in the middle east to pay off some bills and
salvage what is left of our down-sliding economy?

Here's a national health plan I could agree to:

1. The less you get sick, the less you pay. If you have a life long record of wellness your insurance costs very little. This can be computed actuarially so that it is a correct prediction of what you will probably cost the system
2. If you exercise, stay within a healthy weight, eat organic food, you pay less
3. The less you drink or smoke, the less you pay
4. If you actively participate in preventive health programs you pay less
5. If your lifestyle statistically suggests you will require less insurance, you pay less

In other words reward better performers with a much lower rate - a truly proportionally lower rate. I rarely get sick and I have never had a serious disease.

I'm not hard-hearted and I know illness sucks - but we need a system that makes people responsible for themselves otherwise they typically just get weaker. I don't drink or smoke or take any drugs. I exercise regularly and I stay at a healthy weight. Why should I pay premiums to support people who don't give a shit about themselves or their health until they get sick?

Gary Flanigan wrote:

> I'm not sure what the big deal is here. We already pay Medicare and SS taxes
> out of our paychecks, so what's different about this?

So you're saying since we're already getting screwed what's a few dollars more?

>

Not a problem. Can I opt out of all the other bullshit I don't want to pay for too? Doubt it. Our lowest common denominator system doesn't work without a police and military to make sure everybody pays.

you can come down with a debilitating disease?

Yes, you done all the so-called right things to stay healthy. But, there are millions of folks who were Health-Nuts who contracted cancer, MS, and other deadly diseases my friend.

You are one of the blessed ones to not have contracted many diseases.

No Man(Woman) knows the day or hour when our time is up on this earth. We don't even know if we'll see the next day.

Just a thought..

This is like saying that one of the byproducts of global
stupidity is that people will get more intelligent.

Let's see, what else can we blame on opposite-cause events like this? If you gain weight, then you'll get skinny? If you become rich, it means you can't afford a place to live? If you go crazy, then it means you're sane? Nope, none of those make sense. Hmmm.... doesn't seem to work with ANYTHING else except global warming, where a cold, cold winter can be blamed on too much heat.

>But temperature changes cause weather changes, and the greater the temperature change, the more extreme the weather. A small change at a global level can cause big changes at the regional level (e.g. introduce warmer winds into a cold climate and you'll get snow, sleet, etc).

At the same time, weather comes in cycles, so to measure increases and decreases in weather patterns you have to go back many decades, or even centuries.

That is exactly what is happening. Rampant global stupidity makes true intelligence
stand out.

ChuckOK, you win.... ;-)

Hehe, I see your point. I mean I'm sure everybody sees it, but...

(1) Weather has always been a bit like that. I mean generally the equator
is warm and the poles are cold, but we all know that things like tornadoes,
storms, rain, temperature etc, don't follow this simple rule. Otherwise we'd
have one global weather prediction and you'd just add 2 degrees because you're
closer to the equator than GMT (T for temp ;o)

(2) Scientists predicted this well over two decades ago, and have become
more confident of it each year. Meanwhile the planet has heated each year,
and extreme weather events have increased. This is commonly accepted as explaining
your wacked storms and tornadoes of the last decade. Indeed you break the
tornado record almost every year now, and the planet breaks the temp record.

You examples aren't as rock solid as they appear in any case:

>If you gain weight, then you'll get skinny?

Well one might have thought that eating couldn't make you skinny, but the more celery you eat...

>If you become rich, it means you can't afford a place to live?

Well if you get rich emitting greenhouse gasses can you buy a new planet?
;o)

>If you go crazy, then it means you're sane?

Ask Galileo. He was mad. The dude claimed the earth was round, and that the moon surface wasn't flat but had mountains. He then invented and built this thing called a telescope so people could look through it at the moon. People thought he had won until all the top scientists discussed it and explained that "No, the surface of the moon is totally flat, but it's covered in a TRANSPARENT MATERIAL which can't be seen by the telescope". Thank goodness for that.

Now that doesn't refute your points very solidly, but all rules have limits.

I trust the people who are acclaimed as experts, and put there hand up saying "This is what will happen" which was then followed by that thing actually happening. Generally speaking when somebody claims to be an expert and I can't fault their claims I trust them.

I'd be interested as to whether anybody else on the planet, who doesn't support global warming, correctly predicted the increase in extreme weather events with some alternate reason. I'm sure they have concocted some explanation by now, now that they see it, but when I'm deciding who to take my horse betting advice from, I trust the guy who predicted 9 of the last ten races before, not the guy who has a good excuse after the event...

....nor, indeed, the guy who posts on a NG saying "I know nothing about horses, but that blokes horse tipping method doesn't make sense to me!". ;o)

Cheers,
Kim.well, for me I'm about 9~10 years playing it that way and it's a comfortable fit... besides, I'm a pullback kinda dude and I like pinch harmonics that I can raise 5 steps :) Did I mention I'm an old metal head Vai kinda guy? What I don't get is why the saddles are not optional with different radius builds. They might be by now, but I've never seen it. Would be a real cheap fix to an age old issue.

Thanks,

TonyHere's a link to my little central Iowa band of weekend warriors playing Foreplay/Longtime by Boston. This is from a 2005 show that we opened for the Little River Band (who are absolutely phenomenal by the way). We set up a bunch of home video cameras and our guitar player (who's day job is at video production company) edited the shots together. The audio is straight from the camera mics. Also, being the opening band, we only had like 10 channels on the mixer, so no tom mics on my drums. Kick, snare and two overheads. If you like it, there are 8 other videos posted from that show also. Sorry for the shameless self promotion. I just posted these last week, and will do anything (almost) to get the view numbers up. ;>)

<http://www.youtube.com/watch?v=5vQm8Oqg94M>

Thanks,

We can only hope! :^)

An increase in extreme weather events is predicted by climate scientists as a consequence of the current climate change event.

It may seem counter-intuitive until you really think about it.

Warmer ocean water, more evaporation, more energy in weather systems to carry the moisture farther, this can bring more snow over the mountains.

(And again, any single weather event can't be linked to the current climate change by itself. But over time we can measure patterns.)

Another recent study shows the possibility for earlier rain and earlier snow pack melting leading to quicker snow pack degradation. So even though individual weather systems may dump a lot of moisture (hang in there, Dee!), it may not stay around as long or melt as slowly. Which means we may be facing possible water shortages in some areas.

<http://climate.weather.com/articles/watertrends020108.html>

"They found that up to 60 percent of changes in river flow, temperature and snow pack between 1950 and 1999 can be attributed to human activities, such as driving, that release emissions including carbon dioxide and other greenhouse gases into the atmosphere."

> Let's see, what else can we blame on opposite-cause events like
> this?

Don't be confused by the term "global warming." It doesn't mean equal heat everywhere on the globe, weather doesn't work like that.

That's one reason to use the "climate change" label instead. It's more accurate and less confusing to people. Another is that as the surface warms (on average), the mesosphere cools. Both from the same mechanism, the additional heat absorption and re-radiation from additional greenhouse gases.

It's interesting to read about this stuff.

Heh. It was hardly a rant, Neil. You should see it when I really cut lose. ;^)

I didn't bring up climate change in this thread. I just responded to it, like you.

> ...but right now I've got to go buy some carbon credits.

If you think that's best.

styles. Wanna place any bets on that happening? ;>)

Seriously, I don't know if I believe everything the doomsayers are preaching. I also don't think we're doing the world any good though by the amount of carbon we pump into the air. Hopefully, we still have enough time to figure out a clean way to produce the energy we need to maintain our current and growing rate of consumption. I just don't see us all getting around on horses, plowing our fields with oxen, and reading by candlelight anytime soon.

Maybe the Mayans's were right? Four years and counting is it? :>o

>If you think that's best.

Oh, I'm sure it'll fix everything.

NeilHey Aaron. I bought a Roland TD-20 set (the same sound module they were using in the Toontracks video) last fall, and have played around with it triggering DFH Superior running as an Audio Unit plugin in DP5. I've got my buffer normally set to 256k. I haven't tried to measure the latency, but I can't discern any "noticeable" delay. I've come to realize that some people are much more sensitive to latency than I though, so take that with a grain of salt. It didn't look like Z Nir was having any problems in the Toontrack video. At any rate, I will be upgrading when 2.0 is available.

Tony

Me? No, I'm not saying that.

We would have been better off not dragging our feet for so long, but there's still time to make a difference, and people ARE acting on what we know.

> We really are
> our own worst enemies. The problem now is we can't do much to stop it.

It's important to realize that's not true.

Doing nothing would be a very risky choice.

Some warming has happened, some will still happen no matter what we do because of how long greenhouse gases already added will stay in the atmosphere.

But a significant amount of warming can still be prevented. There's a lot we can do, some of which we are already doing.

> Short

> of deciding, as a species, to go back to living "pre-industrialization" life
> styles. Wanna place any bets on that happening? ;>)

I haven't seen that idea proposed in any serious mitigation plan. :^)

> Seriously, I don't know if I believe everything the doomsayers are
> preaching.

Nor I. There are always exaggerations. But if you avoid some of the more hyperbolic special interest groups and stick closely to the science, the more likely range of possible outcomes is worth paying attention to and working to mitigate.

> I also don't think we're doing the world any good though by the
> amount of carbon we pump into the air.

It might be good for some places where a warmer climate is at least a superficial improvement, but bad overall for the possible shock of rapid ecosystem change, threats to coastlines and hard to predict outcomes like the possible melting of permafrost (which would release methane, another greenhouse gas), changing of ocean currents and other rolls of the dice.

> Hopefully, we still have enough time
> to figure out a clean way to produce the energy we need to maintain our
> current and growing rate of consumption. I just don't see us all getting
> around on horses, plowing our fields with oxen, and reading by candlelight
> anytime soon.

I don't know that horses are all that great of a solution, although I like horses. :^)

But we have a lot of options. There are a lot of efficiency improvements we can make in building design, city planning and manufacturing; logistical improvements to transportation; more efficient uses of fossil fuels; increased use of renewable energy; and faster adoption of more efficient technologies.

Here are a few different perspectives:

<http://carbonsequestration.us/Papers-presentations/htm/Pacal>

a-Socolow-ScienceMag-Aug2004.pdf

<http://www.ases.org/climatechange/>

<http://www.westernresourceadvocates.org/energy/clenergy.php>

<http://www.ipcc.ch/>

I highly recommend this issue of Scientific American:

<http://www.sciam.com/sciammag/?contents=2006-09>

Especially this article:

<http://www.sciam.com/article.cfm?id=a-plan-to-keep-carbon-in>

Worth a trip to the library.

> Maybe the Mayans's were right? Four years and counting is it? :>o

What did the Mayan's say?

t;P.P.S. Now we're getting =
way OT,=20
but it was funny tonight. Obviously, I'm
a tweaker and twiddler to =
the nth=20
degree sometimes, but a lot of the demos
I was sort of like, 'Yeah, =
you=20
could do all of that very fancy editing but
you also could play =
your=20
goddamn part right.' I think that's coming from
actually spending =
lots of=20
time tracking large, loud instruments for the first
time in years. =
When one=20
of the guys in the Monkees says 'Well, I think that
sounds good but =
maybe=20
not bright enough. We can always EQ it later' I'm the
one to say, =
'No,=20
let's move the mic a little more on axis or get another
mic on it. =
The=20
better it sounds now the easier it will be to mix later.'
Ya know, =
Alex=20
Chilton managed to make '#1 Record' without unlimited undo,
so =
maybe we can=20
all play our instruments well and sing in tune and leave
some rough =
edges=20
in there so we don't sound like Bon Jovi. Anyway, that's
my opinion =
now for=20
some odd reason, I think playing through Savage and Top
Hat amps =
with a=20
choice of five _really_ nice electric guitars helps ;-) Once
I'm =

back in=20

electronica land I'm modulating pitch descend on kick drums =
with
LFOs from=20

the bass patch like I'm supposed to.</BLOCKQUOTE>

Why? Automatic gainsaying of every study you see that doesn't feed your
confirmation biases is not convincing. You'll have to give reasons, for
this one and all the rest.

> Try this on for size...open letter to the Bali Conference...check the link

> to the list of signatories at the borttom of the article

>

> <http://www.nationalpost.com/news/story.html?id=164002>

Great! I'll pick it apart over in General to spare Neil any cognitive
dissonance. :^)

> I can only say that when the world's two top scientists (Hawkins and Dyson)

> disagree on this topic you can be damn sure the science of "Climate Change"

> is far from decided

Waiting around until all scientists agree means never doing anything.

The threshold is not, "does everyone agree 100%," but "on what most of the evidence shows, what is the risk posed by doing nothing?"

We know this:

- We only get one shot at this. One window of opportunity.
- The risks of inaction are significant even at the lower range of projections.
- Compelling evidence shows that humans are contributing to the current climate change event, which on the plus side means we have the possibility to control our contribution.
- The more we wait, the harder it will be to mitigate.

Given all that, it makes sense to act to mitigate our greenhouse gas contributions sooner rather than later. It's the prudent course.

We can keep arguing about the specifics in the mean time. We will never get 100% of the scientists, let alone the politicians and special interest groups, to agree until after the fact. When the world can look back and say, boy we did the (check one) ___right ___wrong thing. At which point our great grandkids will (check one) ___thank us ___hate us.

> nuff said...crawling back under my rock

Probably a pretty efficient living arrangement with all that thermal mass, if it's insulated. ;^)

Cheers,

-Jamie

www.JamieKrutz.com I love Cubase 4.....except when I hate it. the "Presets" thing sucks so bad that I want to hunt down whoever created this and feed them into a wood chipper while their family is forced to watch.

Gee, that sounds suspiciously like something we used to call "weather".

You know, before we called it "global warming".

Wood chipper??? I think all that snow you're getting up there is giving you "Fargo Syndrome".

Or you could go to the moon. Or buy every puppy a Popsicle.

All are false choices. The question is "what should Canada do about greenhouse gas emissions?"

If Canada also wants to consider water in Africa, going to the moon or the puppy thing, those are separate issues.

Except possibly water in Africa, since climate change may cause drought in certain areas. So maybe by addressing greenhouse gas emissions, Canada can both mitigate greenhouse gas emissions and possibly help Africa fend off future water problems.

But listen, here's the bottom line: Whether you agree with the solutions Canada signed up for with Kyoto or not, the evidence for human contribution to the current climate change event is compelling enough to merit our attention. So if you have other ideas for mitigation, jump into that conversation.

Kyoto ends in 1012. The next solutions agreement is being negotiated now. And this time it is likely to include the USA, China and India.

So this next agreement will have a larger impact than Kyoto (and it needs to).

> Interview with Tom Harris Director NRSP
>
> <http://www.nrsp.com/>

I didn't see an interview there, but I read some of their pages.

I agree with some of their stated objectives and disagree with others.

The good side of that is we have some common ground on some of the generalities.

However, they are not the objective source they pretend to be. It looks like they are pretty heavily involved in the denial industry from a fossil fuels special interest perspective.

For your consideration.

http://www.sourcewatch.org/index.php?title=Natural_Resources_Stewardship_Project

"The NRSP has been exposed recently as being controlled by energy industry lobbyists."

"The NRSP maintains it has no direct connection with the Calgary-based group of climate change skeptics the "Friends of Science" [5] (FoS), even though the FoS's most outspoken member, Tim Ball, is now the Chairman of the NRSP. With the exact same purpose and goals, and most of the same scientific allies and members as the Friends of Science, the NRSP is viewed by many as a reincarnation of the FoS, after the FoS was "outed" by The Globe and Mail newspaper in August 2006 as being partly funded by the oil and gas industry. [6]."

There's a lot more. Just so you know where your champions are coming from, and what they are most likely to be championing.

Cheers,
-Jamie

www.JamieKrutz.com Love the Cohen brothers, No Country for Old Men is one of my favorite movies in years. Miller's Crossing is one of my favorite ever. Fargo is a one joke movie about how dumb/silly/provincial Midwesterners are. Yes there are dumb hillbillies everywhere, including the midwest, but if that's the only story you have to tell, whey bother?

TCB

Climate change does not alter the fact that the earth has weather.

Who do you think is making that claim? That would be a false claim. Who are you listening to for your scientific input? Where do you get this stuff?

Given the fact that the earth has weather systems, one possible outcome from adding more energy to the system is it can cause weather to be more erratic and extreme.

And, again, no specific weather event can be tied to the current climate change event. But over time we can look for patterns.

Is that clearer?

<http://en.wikipedia.org/wiki/Weather>

"The weather is the set of all extant phenomena in a given atmosphere at a given time. It also includes interactions with the hydrosphere. The term usually refers to the activity of these phenomena over short periods (hours or days), as opposed to the term climate, which refers to the average atmospheric conditions over longer periods of time."

Cheers,
-Jamie

Of course not - I'm actually just trying to put things in perspective... it's winter, meaning: sometimes it snows in some areas - sometimes it snows a lot. What I find amazing is that if it snows only a little, you're gonna say it's due to global warming... if it snows a lot - global warming.

Do I think that, knowing that emissions of various types affect the atmosphere in a negative way, we should ignore it & not try to do something about it? No. But I also don't think we should slaughter every cow in India just because their aggregate greenhouse gas output in the form of methane surpasses that of the five or six largest cities on the planet combined; and when you tend to blame everything on global warming, from the fact that it's snowing in Durango, to the problem someone's having with their PC overheating when they try to run five EDS cards in it, you've kinda gone way past the "cry wolf" zone in terms of credibility.

NeilDang!!!.....I think you're right. Where you can find any flat land around here without trees, it looks sorta like Fargo right now.

;o)

Dude that was awesome.

My band used to play that song some 20 years ago.
I sang and played guitar. I had alot of trouble singing
those high notes. We had a kick ass keyboard player
though.

I think you guys nailed it.

That's not at all what I said. Maybe it's what you expected me to say?

What I said in my last post to you was:

"And, again, no specific weather event can be tied to the current
climate change event. But over time we can look for patterns."

Which is the opposite of what you think I said. Weird.

Before that I wrote:

"An increase in extreme weather events is predicted by climate
scientists as a consequence of the current climate change event.

It may seem counter-intuitive until you really think about it.

Warmer ocean water, more evaporation, more energy in weather systems to
carry the moisture farther, this can bring more snow over the mountains.

(And again, any single weather event can't be linked to the current climate change by itself. But over time we can measure patterns.)"

Read that last paragraph again.

- > Do I think that, knowing that emissions of various types affect
- > the atmosphere in a negative way, we should ignore it & not try
- > to do something about it? No.

Agreed.

- > But I also don't think we should
- > slaughter every cow in India just because their aggregate
- > greenhouse gas output in the form of methane surpasses that
- > of the five or six largest cities on the planet combined;

I haven't heard anyone suggest slaughtering every cow in India. Who is proposing that one?

Also what is the source for your methane statistic?

- > and
- > when you tend to blame everything on global warming, from the
- > fact that it's snowing in Durango, to the problem someone's
- > having with their PC overheating when they try to run five EDS
- > cards in it, you've kinda gone way past the "cry wolf" zone in
- > terms of credibility.

Right. Except you're wrong. Maybe you're not reading what I wrote because I haven't been saying that.

Maybe you're thinking of someone else. I believe it was Don N. who implied that DJ's snow was a result of GW, but he was being completely facetious.

So no, I didn't blame the snow in Durango on global warming. Nor the thunder snow here. We won't know that about any specific event until we can look back and see what the pattern is, and take into account other cycles and patterns like (for North America) El Nino, La Nina, etc.

However, it is true that an increase in extreme weather events is one possible consequence of the current climate change event. It's just that we can't look at a specific weather event and say, yeah, that one is

from climate change.

What we can do is keep track of the data and look for longer term trends.

And finally, I'm pretty sure that running 5 EDS cards in one computer is THE major contributor to the current climate change event. FOR GOD'S SAKE, NEIL, UNPLUG THAT PARIS BOX!!!

LOL! ;^)

Cheers,
-Jamie

Luckily we've already mitigated that one with a successful international effort. No more chlorofluorocarbons in propellants!

Pie on!

Very little oil funding? IOW, they do accept oil funding.

Just something to keep in mind especially if you are going to charge others with bias based on money, which was one of your claims (and mine, too). It's always interesting to know where a source's bread is buttered.

Accepting money from a biased source doesn't automatically make their arguments wrong, but it does shed light on their perspective and may explain if they choose to ignore some of the evidence in favor of a sponsor.

> they've
> answered the hard questions (in the media) regarding their funding and

I mentioned denial because they are heavily denying existing evidence with vague general statements on their web site. Similar statements to those used by the denial industry in the USA.

I don't know anything about their debate challenge (links please) but the issue is discussed widely worldwide. Although it's really moved on to the solutions discussion at this point. Maybe they aren't being taken seriously internationally. I'll be happy to discuss their perspective, though.

those are CFCs Neil...have nothing to do with greenhouse gasses so whip cream away

hehe

And yes I was being a smart ass with my Deej's weather is a result of global warming comment.

Speaking of weather...China's having the coldest winter in a hundred years...think it might be a sign of global cooling....wait didn't we deal with that in the 70's...or was it the 80's...doesn't matter because it was a natural phenomenon called weather cycles...somewhat like this one we're in...but just to be sure let's pump billions of dollars into useless CO2 reductions just in case.

The research is far from over Jamie and the more that comes in the more the evidence points to causes far more significant than man's contribution to the atmosphere's CO2 levels. If you check I believe we have as humans increased the CO2 levels by 3% which is approximately 0.0003% of the total make up of the earth's atmosphere yet changes in the sun's activity have a significant effect on the level of water vapour in the atmosphere which as we all know is the real engine in temperature change on the planet

And on a slightly different note but on (off) topic check the latest news on NASA's weather reporting stations records on temperature...seems they made a mistake in their calculations...on the high side...oops made a mistake sorry to scare you guys. Don Nafe wrote:

You're just baiting now, Don. :^)

Misinterpreting the science, and begging the question.

Google global cooling and see if you can't knock down that straw man yourself. Then read up on weather cycles and get back to me with specifics. And remember that climate change doesn't magically keep weather from happening.

Meanwhile, the world moves on with solutions. Even Canada (except maybe for your "hardly any oil money" guys ;^).

> The research is far from over Jamie and the more that comes in the more the
> evidence points to causes far more significant than man's contribution to

Of course research is ongoing, Don. And it will be for a long while yet. There's always more to learn. But we already know quite a lot after decades of research.

So far, the research is showing that human contributions are a significant factor in the current climate change event.

None of the scientists are so ignorant that they don't take other climate drivers into account. Except maybe your guys who perhaps ONLY take other climate drivers into account. :^)

If you check I believe we have as humans

- > increased the CO2 levels by 3% which is approximately 0.0003% of the total

- > significant effect on the level of water vapour in the atmosphere which as we
- > all know is the real engine in temperature change on the planet

Thanks for bringing up the tiny number scare. It's specious.

We are releasing a significant amount of greenhouse gases that were previously sequestered underground. By adding them to the tiny fraction of the atmosphere composed of greenhouse gases already in circulation, we're affecting the ability of the atmosphere to retain infrared heat (that's what the greenhouse gases do). With a long lifetime in the atmosphere, the gases stay around and we keep adding to them. And so we are able to have an effect on the average global temperature over time.

- > And on a slightly different note but on (off) topic check the latest news on
- > NASA's weather reporting stations records on temperature...seems they made a

- > to scare you guys.

Link? That sounds like old news, long since corrected. Get with the times, Don. Are we going to hear every denial rationalization now, one after the other? I've probably heard them all by now. I should number them.

At some point you're going to realize that your real complaint is with some of the proposed solutions, rather than with the essential facts of the problem. Denying the problem is just an ineffective way of trying to head off solutions that may not be politically attractive to you. It's a losing strategy on multiple levels. For one thing it removes you from the solutions debate where you could have an effect on the solutions chosen.

Cheers,
-Jamie

www.JamieKrutz.com I doubt that we are going to solve the global warming issue in this forum. Does that mean we as humans should all blindly continue a pattern of waste?

Let's talk about what hits you in the pocketbook. Let's talk about what some of you creative, intelligent people are doing to save money and cut waste. Seemingly stupid shit. For example in our house:

* In infrequently used/'non reading' areas of our home we replaced the bulbs with CF bulbs. We also installed auto off motion based switches.

* Stopped buying coffee on the way to work. Take a travel mug.

* Stopped buying bottled water on the way to work. Added a second faucet with an in-line filtration system. Added a water cooler. Refilling the 5 gallon cooler bottle from the filtered tap once a week. 10,000 gallons of water costs approximately \$70 in these parts. You do the math.

* Purchased appliances, actually looked at the energy efficiency ratings and cost per year of operation.

* Keep car tune up schedule, watch tire pressure, regular oil changes.

* Replaced 100 year old windows with energy efficient triple pane windows.

* Check and repair toilet mechs on a regular basis.

Stupid shit, but I'm pretty detail oriented and every single one of these things is saving me money, including the initial outlay.

ChuckI have no problem with the best free health care and really good food (and education) for children. And I know that people can do all the right things and still get sick, but there are ways to statistically predict illness and one can look at the past record of a person to see if they are likely to get sick again, and from these data it can be determined whether they should pay a high or low premium. What I absolutely wouldn't want is "From each according to his/her ability and to each according to his/her need." That communist maxim sounds wonderful, but gets you a tiny handful of struggling individuals holding it all together and a huge number of apathetic drudges letting it fall apart. Current human beings need a little danger, stress and necessity to rise up to doing something about it, and any workable system must have that as a component or it fails.

At least that is what I think right now. If there is something I'm missing, let me in on it.

I've just try to be more carefull about leaving lights on in the house
that arent being used at night.

> * Keep car tune up schedule, watch tire pressure, regular oil changes.

This is a biggie. If everyone would do this, there's no telling how much energy we'll save. I hardly ever go out and not spot someone with underinflated tires.

>

> * Replaced 100 year old windows with energy efficient triple pane windows.

This too is a biggie. No sense in air conditioning the outdoors. Eveyone should check around doors, windows for leaks and install weather stripping.

JohnGo read my "Proposed royalty rate changes" thread...there's a real cause and effect issue to this group...so far total responses three

Only thing we have to do at our house is replace the windows...that's sheduled this year.

Sorry if the chatter bothers you...but if you don't like it, don't read it...seemed to work with my Royalties thread

;-)

talk about baiting (hehehehe)

actually Canada proposed a 20% decrease in emissions and that still didn't
satisfy the enviro-movement

>> The research is far from over Jamie and the more that comes in the more

Wrong, it opens up debate which this subject has been sorely lacking in since the IPCC report was issued.

and I will stop here. You're entitled to one rebuttal to my last posts then we must move this to the General forum or wait at least six months before bringing it up again

:~)

- >
- > Cheers,
- > -Jamie
- > www.JamieKrutz.com Good topic, Chuck. For me:
- Work at home.
- Drive less, walk more.
- Walk to stores, post office, parks.
- Efficient car (40-50mpg).
- CF bulbs.
- Energy star appliances.
- Recycle.
- Wind power electric subscriber.
- Relatively efficient house.

Cheers,
-Jamie

So your only support for the validity of this group is the web site from

the same group? That's not enough.

Looking over their news page it appears to be a long list of cherry picked examples, scapegoating and hyperbole while ignoring most of the evidence.

You should widen your horizons.

> And lastly comparing the unsafe drinking water in a continent to buying a
> puppy a popsicle is a sad and disturbing commentary on the
> enviro-movement....

What? No it's not. That's just my weird sense of humor.

Just trying to point out to you that you set up a false choice there, and it almost doesn't matter what the second choice is, your false choice is merely a rhetorical diversion.

Now you're being further diverted by the puppies. What did the puppies ever do to you!!!??? ;^)

> in fact they have been accused of using Kyoto etc as a
> means of keeping the underdeveloped countries underdeveloped.

Yeah, that was in that ridiculously slanted "Swindle" video. Totally specious. If you buy that, you'll buy anything.

> Trust
> me...follow the money, I think you'll be surprised.

If you truly want to follow the money Don, you can't ignore the fossil fuel lobby's interest in this issue. Because that's where, by far, the most money is. Including some with your NRSP guys.

As with most issues there are a few scammers on all sides, some at the fringes, and some front and center. I denounce them all, how about that! It's looking like your guys are probably in that group, too.

But what matters is the scientific evidence. Most of which you appear to be simply ignoring, apparently because a denier web site says "trust us."

Cheers,

-Jamie

www.JamieKrutz.com Well.....and long as it makes vaccination mandatory.....

Last I heard there were a lot of rumours that people who make successful alternate energy sources go mysteriously missing. :oS There were a lot of other rumours that the reason that there are only rumours of this is that everybody who knows anything also goes missing.

Probably just another conspiracy theory, and I'm sure he'll be fine, but I can't see why somebody who presumably sells crude oil particularly needs to talk to a dude who converts for biofuels. Just seems odd.

Am I missing something?

Cheers,
Kim.

I imagine not.

I'll make a prediction: no matter what we do someone won't be satisfied.

But that's not a good reason for inaction.

>>> The research is far from over Jamie and the more that comes in the more

OH, OK, back to your denial site. Give me a specific link so I don't have to listen to ALL of January's propaganda. ;^)

But it's probably a rehash, this one went around last summer and was debunked then.

>> At some point you're going to realize that your real complaint is with

Where have you been? This conversation has been going on scientifically since at least the 1970s.

The IPCC has put out periodic reports since 1990.

<http://www.ipcc.ch/ipccreports/assessments-reports.htm>

You can't come late to the party and pretend it just started. :^)

Now I understand your confusion...

> and I will stop here. You're entitled to one rebuttal to my last posts then

>> Hey James, I was just trying to answer your questions.

Like I said below, I'm looking into LEDs for the future, one advantage
is no mercury. Plus it might be fun to do colorful mood lighting
anywhere in the house if I feel like it. :^)

But the mercury in CF bulbs is not a problem if you dispose of them
properly, and the efficiency of the bulbs means they keep mercury
pollution out of the air from coal plants. So that's something. As with
many things in technology, it's a reasonable compromise for the moment.

Cheers,
-Jamie

>Cheers!

>SteveI had the Taylor 414ce Ltd, which I loved however unless you're going to fork out another \$1000 or more on an amp, the expression system pick-up won't come into it's own. Through a standard P.A, I found the ES very hard to control the bass. When stumming the bass made a huge boom, cutting over other instruments and when picking the bass notes would ring into feedback at the drop of a hat.

I've been plying for many years and have had similar problems with cheaper systems but considering the hype Taylor gives it's ES I wasn't expecting it. Plus the fact that the ES is more advanced makes it harder to get that amplified sound you want.

Put it through a Genz Benz or the new Fender acoustatronic Head and Cab and then you're feeling the love!

Anyhoo, I got the OMC Aura and through the Amp, it's all that

and a bag of potato chips, plus through the standard PA with the band, it sounds really amazing too!

The look is an aquired taste I must say as it's an odd shape if you're used to the Dreadnought or even the G/Auditorium and there's a lot of bling on it but I love it!

mmmmmmmmmmmmmmmm

Chris Squire uses a pick, and rocks the house.

NeilGEEZ!!! Don't be lazy, post the freakin' links, DeWd!

<http://youtube.com/watch?v=KAft9P2pgJ4>

There's one, none others showed up in my search.
(BTW, cool Strat - i like the gold/or brass hardware)

I just used one of those on the cruise we just took. It was a fanclub cruise, and the artists are friends. There's a group of us who handle their tech needs when we're around, so the one guy ran FOH for the onboard concerts, and I plugged the H4 into the board and did a 2-track archival recording.

I also tried it as a usb audio interface for Logic Express on my MacBook Pro. Worked fine, but LE has recording time limitations that I couldn't deal with.

At night, there were often informal jam sessions in the library amongst the musos in our group. I used the H4 with the built-on x-y pair to record those, and it was amazingly sensitive.

I like it a lot.

pabl think someone mentioned a Takamine as a possible option much earlier in this thread... I have a Takamine 12-string acoustic with a piezo p'up with built-in volume, bass, & treble controls, from the early 80's (IIRC, i got it in '81 or '82), and it still plays great, sounds nice either mic'ed or using the pickup - I haven't played any of their newer guitars, but if they still make 'em in the same level of quality, I think that brand would definitely be worth checking out.

And I definately appreciate that, Thanks!

RodI'm playing in the house band at a Sam's Club convention this week. Today Babyface was the featured concert talent.

Wow! he is incredible...what a talent. He played accoustic and sang with a very small band...kind of a quasi unplugged thing.

RodThis is one of those products that you say to yourself, why didn't I think of that???

 \$2750.00!!!! You people must be rich or something.
 If I were to spend that kind of dough for an acoustic, I'd expect it to
 fly me to Mars, land so I can discover, and fly me back! Otherwise, I'll
 stick with my EJ-160 or Ovation.

That said... it is very hard getting a great sound from any acoustic directly
 into a mixer or preamp. So many different acoustics I tried. So many different
 settings and arrangements... it always sounds like a junkie electric to me...
 It's nice to have the built in pickup/preamps for quick open mics, or what-nots...
 but I don't look for that anymore. I stick with mic'n the acoustic (like
 we use to do -- old school) and control the sound from the preamp/mixer.

Having said that! I recently acquired America's latest DVD... it was a concert
 in Australia, I think. WoW! they sound almost as good as back in the 70's!
 Anyway, I was at the edge of my rocker (yeah, I am that old.. lol.) with
 the remote. They are STILL playing Ovations! To me, there is nothing better.
 Just my 2 cents...

~ Ed

I tried one of Neil's tunes last winter and failed miserably at it for various reasons - mostly due to my being rusty.

You make his stuff Kick A

Quite a bit of energy in the Garden that night for my favorite songwriter of all time.

>I have had posted before about massive frustration with this Logic Pro 8 not
working vitrually _at all_.
Tried everything. On the phone for extended periods with Apple. Nothing
worked.

Finally it has been solved. I had a slowly failing hard disc. Have replaced

my drives with a 400 gig Seagate for Boot, and a 750 gig Tornado for media
(which I haven't started using yet). Everything is running fantastically.
Usually 25 - 30 tracks, with 40 - 50 plugins, including Firewire LiquidMix.
Not too heavy I know, but smooth nonetheless.

I am finally enjoying Logic Pro 8 as I had hoped I would.

TedThis is a cool little app for Mac. Available on a 100 day free trial from
Audio-Ease. It's competition for Audiofinder, but works with more file types,
including Paris. This is nice, 'cause I can preview my Paris rendered tracks
sent down from my Paris box (G4 800 OS 9.2.2) to my Logic box (G5 Dual 2.5
OS 10.4.11).

<http://www.audioease.com/Pages/Snapper/snapper.html>

Peace,

TedHey Ed, Ovations actually CAN travel through interplanetary space. I
know this because of the Boston album cover where their secret was first
revealed.

However, once you get to Mars, the acoustics are very strange due to the
thin atmosphere. So these days I only fly my Ovation as far as the
corner store.

While my Ovation sounds decent enough, my acoustic Variax sounds better and is more aurally flexible. However the Variax doesn't do space flight, so the Ovation comes out ahead overall. :^)

Cheers,
-Jamie

PS. Apple released a pro-apps update and a Quicktime update yesterday.
Installed both and so far so good.

I recently purchased the Alesis io14 (firewire) that I am gonna try. I need
a cheap something, but with at least 4 inputs. I tried to research, but

so few reviews... But the firmware/driver updates recommend this proggie...
Anyone?Nope, the Matrox, and DeeJ is going to put a pair of them in a Magma chassis,
so he'll have an octo-dane rig.

Glad the pup is doing better DeeJ,

You may or may not be interested in his music, but I find learning monk tunes
is very useful. Same with charlie parker tunes.

Useful as in "learning to negotiate chord progressions in different keys"
sort of thing.

I should spend more time doing such things myself.

 >steve i truly think we have a psychic connection :-). First I love monk. Second,
 for the first time in my life I am working through chord progressions in
 a variety of keys.

My buddies are working on a cd, and they send me roughs to practice.

Since I didn't write the songs, they are not in my 'keys' so to speak, the
 ones I gravitate to for my tiny vocal range.

So I practice each one over and over and then I try and go up to NY and we
 record in their home studio on their old steinway.

For example, one of the tunes was a bluesy tune in F# which forced me to

do all my regular 'slides' li
