install this=20
patch. In fact all this patch does is configure SP2 so that the firewire =
bandwidth can now be set in the registry, you still have to manually =
change the=20
registry setting yourself to configure it. I.e both my firwire cards =
were still=20
running at 100.

I went into the registry and located both my =
firewire=20
cards=20
HKEY_LOCAL_MACHINE/SYSTEM/CURRENTCONTROLSET/ENUM/yourcardpar
t1/yourcardpa=
rt2. To=20
find out your specific card numbers go to device manager and look up =
there=20
properties there,

>David.Hey Dedic,
I see where you are coming from. For my needs, the Mac Pro with OSX is just
fine. 80-120 tracks is fine for what I do..Plus, I don't monitor via in the
box, so I can and do run my current DAW 2048 ms latency, which as you know,
takes a "big" strain off the system resources..

I guess, I'm really really impressed with OS-X and the ability to run (true)XP
(via Boot Camp)on one machine. As well as, being ready for the NEW Logic
Audio..

having said that, I would run Os-X on my current DAWs if Apple allow for
such. Yes, I know you can already do it(smile)..
