Dan,
 Sounds like a smart move then.

Did anyone watch "Father of the Pride" when it was on? At first I
thought it would be lame, but it was really sharp, really funny,
really full of inside entertainment and Vegas humor.

In one episode, La

rry (the father, voiced by John Goodman) is
standing on a bluff overlooking Highway 15 leaving Vegas with another
animal. They're trying to figure out how to get across, since traffic
is extra heavy.

Larry: "Look at all that traffic. Oh, it's 10:30. That means a show
just got out, and it's probably Celine Dion, which means that they'll
all be tired and cranky."

I love lines like that.

-----=_NextPart_000_0079_01C5A326.0F93DB00--Yes, it does come with it's own sounds and they're pretty good. It's also pretty easy to import your own sounds. I've imported several of my dfh Superior sounds. I've been running the AU version of 4.02 on my Mac with DP 4.52 for several weeks and it works well. I haven't tried it with PARIS yet.

Tony

"Tom Bruhl" <arpeggio@comcast.net> wrote in message news:430363ea\$1@linux...

Gary,
I'm on XP Pro, only a couple of samples come with it but the upgrade allows access to purchasing more samples from Wavemachines (Drumagog) website. I have my own sample library derived from many sources and converted to .waves.

Drumagog allows multi samples for triggering which adds realism to the sounds. In other words you can use any and all of 20 samples as one snare sound and Drumagog will use velocity or even random to choose them for individual strikes. I need to get some multi samples for that too.

<http://www.drumagog.com/info.htm>

Check it out if you haven't already.

 Yes, =
it does=20
come with it's own sounds and they're pretty good. It's also
 =
pretty=20
easy to import your own sounds. I've imported several of my =
dfh
 =20
Superior sounds. I've been running the AU version of 4.02 on my Mac =
with=20

DP
 4.52 for several weeks and it works well. I haven't =
tried it=20
with PARIS
yet.

Brian,
Is it possible a PCI slot went bad on the mobo or Magma?
Maybe the mobo in general? May sound radical but it seems
like you've had power surges around your area. If breaking
it down to one card, 1 mec and a fresh install doesn't solve
it I'd say it's a cable or the computer.

-----=_NextPart_000_0047_01C5A45A.83473120--Paris is a great recording platform that lives on even after the corporate world has long since abandoned it. If you have a decent computer to run it on, you will only be limited by the number of EDS cards you have (16 ch.each) and your I/O interface. Most people augment their systems with an array of 3rd party plug-ins, but the Paris EQ is good and the reverbs are useful. Of course any recording system needs a good front end (mics, preamps,compressors) and a good monitoring system to mix on. The only other necessary ingredients are passion and imagination. Go for it.

> Draw up a flow chart?

Hehe, OK, you asked. ;o) I suggest you take the asprins now so they've kicked in by the end of the post... ;o)

How's this pic? The pic may not be totally self explanatory, so...

Firstly, the red lines are Midi lines (the midi foot controller which controls various items). The black is audio... for simplicity ;o) the effects loops, which go to the three items in the bottom right, are drawn as just a one way black wire, when in fact there will be a send and return.

So the three keyboards on the left, along with a mic and a theramin, will all go in to the first Akai Router. I call that the instrument router.

The second router is the effects router.

The instrument router then, basically, sends three signals to the effects router. One signal has a mix of everything which I want to go clean to the PA. Signal Two has a mix of everything I want to go to effects loop 1. Signal Three has a mix of everything which I want going to effects loop 2.

There are only two effects loop feeds which run between the routers, despite

being three actual effects loops, because:

- 1) I'm short on ins and outs on the routers
- 2) Often the pedals and Quadraverb will be hooked into a single effects loop meaning only two loops.
- 3) I can only play two things at once anyhow.
- 4) If I do desperately, for a special reason, absolutely require a setting where I access all three effects loops, I can always make the normal "Clean to the PA" signal go to one of the effects loops... I mean there's no actual reason the three signals which the instrument router sends to the effects router actually have to be PA, Effects 1 and effects 2. Really they're just three sends...

The guitar, for simplicity ;o), will just go straight into the GNX4, which of course will go back in to the effects router which in turn will send it on to the PA.

Now, having gone through all that, the critical thing to understand is that the GNX-4 (centre right) is not just an effects unit, but also doubles as the looper/recorder, allowing me to record my parts and play along with them. Hence a lot of the time, if I want to use the pedals on a keyboard, they will go through the pedal effects loop, and THEN in to the GNX-4, not for effects, but to be recorded, so that I can then play along with that part 8 bars later... this is also why I really want such a complex setup... so that I can route effects on and off various instruments as I please for recording... and route things into, or not into, the recorder. Indeed a lot of the time things will be routed to more than one effects loop for exactly that reason.

Anyhow, I'll stop talking about it and let you have a look at the picture, scratch your head, and suss it out.

In theory, I guess, I could redesign my plan for the second router, so that the effects returns DON'T come back to the router, but instead go straight to the PA. That way I would have recording access to the outputs to all three effects loops (including the recorder/looper) as well as the clean direct to PA signal. That would probably be enough to give me some flexibility in mixdown.

Dunno. What do you think?

Cheers,
Kim.
