Gene,

 =

I have

a =
very early 166
and a 161VU. Is it possible
 they
 =

use the
same vca?!?! I
couldn't find
 anything =
out doing
a

google
search =
about
 it. I
wonder if the new DBX (Harmon)
=
would

have any records
=
on
 that? I'd open them up and =
look
=
but I'm
 not sure which component is =
the VCA.
=
=
Any tips
for me to learn
more? I'll
 look inside =
for
clues.

Tom
=
I
know the
 163 and =
the 166 share
the same VCA (except as noted)
=
and
these
both have
different
envelopes-of-attack from the 161. This =
has a
lot
=
do
with the
overall
sound.
=
I should =

gl think this mic will work for anything you throw at it. As with any other mic, whether or not it will be the best mic for the job will depend on the source/mic/preamp interaction. I don't have a U47 here, but I'd guess from the comparisons I've heard that it would work nicely on the same kind of sources that you would use this kind of mic for. I have had good success using it with both male and female vocalists, though I haven't used it on projects in the rock genre. When I think of rock, I think of an SM57 into a Neve'esque kinda' preamp so that the singer can stick the mic down his throat if he wants to and the capsule won't collapse.

;o)

>>It sounds like you still don't have Card B/MEC2 synced to your WC.
To do this you'd to:

Add the following line to your Paris.cfg file:
UseHouseSync=1

Reboot.

Go to your Paris.exe file in your EMU folder and launch Paris from that. Set your project sync source to Word Clock with whatever sample rate you prefer.

Save this project to your EMU folder as defaultproject.ppj. You can create a shortcut to this project on your desktop.

Now launch Paris from this shortcut and see if your 2nd MEC locks up.

As for syncing to Cubase.....I do it with a Paris ADAT module. You can run a sync cable from the Paris ADAT module to the ADAT sync input of the Digiface, set your RME control panel and Cubase SX and you're good to go.

Well, you were talking about running around naked. this big window looks
 sort of like the display windows of the brothels in Amsterdam.....so
 maybe you could.....errrr.....

BTW, prostitution is legal in Melbourne, so it may be a good way to get some
extra cash...get a good looking chick, (hate that expresion), to sit in the
window all day, the guys come in, and you could sell them some studio time,
especially after they've been "rested"

>That was my feeling when it all went down, too. Emu did a big, long pre announcement
about the new Emu PARIS Pro, during which there were a whole lot of 'b' stock
items to buy at old prices - selling down inventory. And then it turns out
that even the new Emu PARIS Pro stuff was just old inventory repainted -
more selling down inventory. I really think that ID were the ones burnt
the worst in that deal because they actually spent money developing 3.0 during
that time thinking there was going to be long term growth over which they

could make their investment back.

It was a bad situation.

>Basically I use the studio to track myself, and I'm also planning to do a
bit of mixing other people's stuff. Generally I don't track much for other
people these days. The room where the control room will end up is right out
the back, miles from the other rooms, but I figure what I will do is get
an appropriate room that I can run from the control room into maybe the lounge

if occassion comes about that I do want to track something. I'll simply patch in a mic in the studio and we should be able to communicate.

Looking for a place that's good for a studio though is quite a task. It really can take over the house selection process. I've chosen to let the studio take a back seat for a bit for now. If I had have insisted on a perfect studio setup I reckon I could have spent a year looking and still come out dissapointed. My budget, desired location, and the studio simply weren't compatible. One of them had to give. Hopefully though when I leave this place I'll buy a place, and when that happens I do plan to set up the studio properly. That's a way off at the moment though. For now I want to live somewhere where I can go out and live a bit. Obviously I need the studio to be here (or I will die ;o) but if I need to do serious tracking I'm just going to have to get it done somewhere else for now, and restrict my life here mostly to just overdubs and mixdowns. Unfortunate, but hey...

Good luck with finding yourself a place.

Cheers,
Kim.

it being airy, I guess the answer would be yes. It seems to have a bit of
top boost, though it doesn't sound spitty or strident between 10-12KHz on
the sources I've tried it with.

I have some more mic comparison files that I'm going to send to Tony Benson
probably later today.

Any comments? It appears to me that the signals are recorded at 24
bit, then processed at whatever bit rate the plugin on the channel has,
including dither, or not, then reprocessed to 24 bit, then these channels
are summed. I'm no guru when it comes to this stuff, but I get this feeling
that this reprocessing *per channel* is the reason the TDM systems seem to
start sounding gnarly as more and more tracks are summed. What bad gramma?

I will buy Dimitrios for \$49 too!

And he should come to Denver and show me how to use Wormhole.

"Tom Bruhl" <arpeggio@comcast.net> wrote in message =
news:43699234@linux...

I would buy Wormhole if I saw any benefit to my situation but I'm not = sure

it will help me. I like staying in Paris. The only thing that would help me is to use a second computer with Cubase to send softsynths to Paris and/or process outboard DX/VST effects for Paris global or even inserts if extra dsp was needed. =20

From what I know it won't help me greatly for any of these things = without

tying down the CPU and still have latency issues. I'd do better using realtime ADAT in/out and I already have that.

If I'm wrong tell me why. With Paris being the mother ship I don't = see any

great options here. On the other hand I'd be glad to buy a latency = compensating

version of Paris when that comes down the pike. I won't hold my =
breath waiting
though.=20

Thanks Dimitrios for your work. I'm sure many will still benefit from =
your effort.

160X is O.K., but I have many compressors I would reach for first. I certainly
have used them in mixes that I have done in commercial studios once I have
used up the other choices the studio may have. Not bad on bass or electric

point.

The negative effect you get going through a D/A-A/D pass at mixdown is lessened
considerably by the use of high-end converters. Ultimately, if you have access
to great analog gear you will probably come out ahead even with the converter
pass.

Most mastering engineers still use analog for this reason.

particularly with transformer coupled devices. Mic pres are generally designed
to match 300-ohm mics, a severe mismatch will make your mix sound very small.
Also, most preamps have a minimum gain requirement and many only sound good

If you lower the level entering the pre, you seriously reduce your signal
to noise ratio.

Of course, some mic pres have line inputs as well and that is a different
story. Most Neve pres will also accept line level and can be used to help
pump up a mix. I like the 1084 for this.

A good lesson that most engineers fail to follow, is:

LISTEN WITH IT OUT. Most engineers will try adding a compressor, eq or effect
and get the track to sound good and move on. It only takes a few seconds

its rare to find an engineer that follows this simple procedure. I should
have that in my signature.

Gene>Of course, some mic pres have line inputs as well and that is a different

So you mean, the DA/AD with the stock Paris converters the gains could still outweigh the issues?

yeah, this is what I meant, take paris outs in to a pre like my BAE 312 via 1/4" then into even my 166 with just tiny amount of GR. Of course I'd check with out it, but I wondered if it was done. One example of why I would want to do this would be on a CD I am mixing that was recorded ny a band at thier home studio on rudimentary gear. It would be cool if this added some meat and nice color.

Thanks for your input Gene,John,

Last I heard, ID hadn't completely given up on the hope that they could make PARIS a viable product somehow. I certainly don't agree with how they handled things around here - because I don't think they acted in their best interest, never mind ours.

But, anyone who thinks that a small number of users with obsolete hardware are going to get custom software written for nothing is nuts - no matter what was said or promised. It's just not going to happen. And that's what ID was being asked to do when Emu backed out.

It's too bad that everyone didn't communicate better and show more understanding at the time. Maybe if ID had said something to the effect that "Emu backing out changes everything, so who is willing to pay more to keep this thing going?" We could have worked something out. But with people calling them names and threatening to sue them, there wasn't even a chance of that happening.

If what we wan is for someone else to pour a bunch of money into something for which they will never get a return, we're crazy. It's not going to happen. There was never any chance it would happen. Maybe ID should pay all our credit card bills, too? Or buy us all a house?

All the best,
Mike

>Ya know.....I still can't believe that this whining about Paris/EMU/ID
is still happening. It seems it would make sense to either sell your system
and get out or just record music with it. The *I'm pissed off at ID thing is
soooooooo irrelavent, IMHO* I do wholeheartedly agree that things were
handled badly by just about everyone involved.....Ensoniq, Creative, EMU,
ID and us.. Let's move on, shall we? Either it still works, or it is still
marketable to someone else. If you bought it new, are you going to get your
money out of it?????? No, but if you bought a PT system in 1997 you are
hosed too. If you sell your Paris hardware, you will likely make enough to
get yourself a native sound card and converters, or whatever.

Deej

The harmonies from "because" off Abbey Road sound like what you are describing.

Too bad this mic has only one pattern.

> Regards,
> DimitriosTony,

I will be sending you some mic comparison files soon. They will be comparisons of different mics. The first batch will be reamped audio of a short sample of a Dixie Chicks song recorded 24/ 44.1 through Mytek A/D converters. the first will be the original audio to be used as a control. Next will be the reamped files using the following mics through a Great River MP2-MH.

1. Rode Classic (original version-not Classic II)
2. Rode NTK
3. Rode NTV
4. Rode NT 1000
5. Mojave Audio (Mic #1-handmade by Mike Claytor - my *go to vocal mic for years*)
6. Mojave Audio (Mic #2-also handmade by Mike Clayter-a little darker color-probably due to the painted grille)
7. AT 4050
8. Studio Projects C1

9. Neumann U87
10. SE Gemini (Groove Tubes 12AX7 and 12AU7)
11. SE Gemini (Groove Tubes 12AX7M<the Mullard copy> and 12AU7)
12. SE Gemini (SE Electronics stock tubes)
13. SE Titan (Standard voicing)
14. SE Titan (currently a beta mic with different voicing)

The next batch of files will be a mic shootout I did here weekend before last with a great flatpicker on a Collings guitar. We were demoing certain mics to determine which mics or combinations of mics to use for a tracking session. The mics and preamps are as follows:

Pair of AKG C460B's (Forssell JMP preamps.)
Pair of Neumann KM 184's (Forssell JMP preamps)
Pair of SE Electronics SE3's (Forssell JMP preamps)
AT 4050 (Sytek preamp)
Neumann U87 (Sytek preamp)
SE Titan stock voicing (Sytek preamp)
SE Titan beta voicing (Sytek preamp)
Mojave Audio (Great River MP2-MH preamp)
SE Gemini (with Groove Tubes 12AX7 and 12AU7 tubes (Great River MP2-MH preamp)

I'm going to try to get this finished up tonight and will contact you as soon as I've got the MP3's edited and ready.

I've been very impressed with these SE mics and I guess I have to put up a disclaimer here that I don't have any kind of *deal* going with these guys. Morgan sent me a Gemini and a Titan a while back to demo and I liked them so much that I got curious about these so he sent me more. I'm just enjoying having a bunch of these mics here to compare to the mics in my cabinet, and to use on ongoing projects.

Y'all stay tuned.

Deej

And do tell what you felt was the difference.

I just listened to some shootout files on another site that had a 67, 4033 and Gemini. I loved the 67 of course, but I was surprised how much low mid mud the 4033 seemed to show on Acoustic guitar (I have one) and also at the same time how familiar this sound was to me. Almost like this mic is modulated up in that area.

The Gemini did seem to have some hissy quality (18k and up?) I didn't like so much but the detail and sparkle (10k bump ?) I did like. I could see it being great for acoustic tracks in a power pop type mic.

>>Have you loaded it into the patchbay properly? You have to actually drag the adat module into the "MEC Modules" config window. Double click on the "MEC Modules A" (assuming only one MEC) and you will open the selection window. This window has four "slots"... two for input, and two for output. Drag the adat card from the right to the desired position on the left. Then go back to the main patchbay window and connect the "Module inputs" to the desired mixer input channels. This is detailed on Page 34 of the Paris Pro Reference Manual.

Let me know if you have any further issues. If you do, give me a call at 403-291-9112 9 to 5 MST.

David.

A horse farm????? Oh dear!!!!

<http://www.graphicresultsofdurango.com/index.html>

Notice that once you enter the link to the recording studio, my wife =
still manages to bring horses into the conversation.

Is there a 12 step program for this?

;o)

"Edna" <edna@texomaonline.com> wrote in message =
news:436fbab3@linux...

Thanks much. I live in the sticks on a horse farm, so will go to =
the big city (about 19 miles) to get one. I'm not sure what a =
"crossover cable" is (multi-purpose?), but I will avoid anything with =
that name. I have a SCSI cable I will use with the MEC - anything =
special here?

Edna
