And that shot is on a 19" flat screen LCD monitor...hmmmm

Don

"Tom Bruhl" <arpeggio@comcast.net> wrote in message =
news:45669410@linux...

Jeff,
Your screen shot looks like it shows 3 more strips than 1280x1024 =
allows. That's nice.

I was thinking of using the Matrox Triple Head 2 Go which seemingly =
only provides 3840x1024
to three monitors off of the second head of my dual head card. I =
think I'll be stuck here right?

I guess with this scenario I'll be stuck with 1280x1024 permanently. =
Okay then no widescreen.

I also really don't like that shiny glass look of some new LCDs. I =
prefer the flat look if you
know what I mean. They don't seem to show glare as much. Is there a =
name for that duller looking=20
type screen?

Thanks for all the info. It is helping.
Tom

"Jeff hoover" <jkhoover@excite.com> wrote in message =

Don,

Screen shot attached at 1600X1200.

card?

You need a dual-head card, and that's about it, really...
nothing special apart from that - Windows XP (And also ME, not
sure about earlier versions) even has options under
the "display" submenu that lets you configure this.

FYI they're not all super-expensive, either; I saw one at Best
Buy a couple weeks ago for \$59, I don't recall the brand, but
it was a 128Meg dual-head AGP card.

Neilvery much thanks and appreciation to all who responded to my recent inquiry as to how I might make the EDS1000 behave like a general system soundcard--- some very valuable and useful ideas/general knowledge, surfaced- and one very strong possibility---

anyone else with anything at all more to add to the general mix, will also be very much appreciated---

most sincerely,
harry e. That's a pretty cool idea... maybe you could even use it for re-amping stuff (have you tried THAT on the B3 yet with the POD?).

timeline onto one of these beauties, as they will do 720p from the VGA or DVI port without breaking a sweat. Still looking for the proper AVI file types to achieve that, though...
