---=\_linux433b5aaa--Aaron thanks for your help. Please advise me on how to save this config setting into Paris when you get a chance to send the email. the email listed above is correct. Thanks Again DavidRick, it actually could be the RAM. Some systems act funny with different brands of RAM. I assume it shows up in the hardware profile? Have you tried other brands? How does it run with out the added memory? Have you tried different drives internally? What version of OSX are you running?

The statement that they (Apple) can't warranty

it working with third party products is unreasonable, you have a reasonable expectation of it working when you bought it. Apple can not guaranty that their product will or won't work with third party products, that is a given. I would ignore that statement, and do as I suggested, take it in, if that doesn't work hire an attorney to write a letter. Start with the BBB, it's free. Also bad press is not good, people have set up negative web sites and Apple ends up fixing the problem. iPod nano screen, etc.

By the way Apple was number one for years in customer service and satisfaction. I believe they were rated number one again last year for the first time in years. I think reputation is important to them, so don't give up. Remember, The squeaky wheel gets the grease!

People have won many lawsuits against Apple, you just don't hear about it.

Usually the issue is resolved with some form of remedy. I don't think you need to go as far as to file a suit with them, I think a letter will work.
