Oooops!

Sorry for the humungous pic!

Here 'tis only smaller.

Looks like a Tolkien character.

The hairless (Sphinx) and under-coating-only cats (Devon Rex and Cornish Rex) are some of the coolest cats you'll ever meet. I'm particularly fond of the Devons, whose fur is like rippled mink. They are extremely intelligent (refreshing in a cat), they love water, and are amongst the most social of animals, very bright, lovely personalities. And they have huge ears.

I've enclosed a photo of a Devon.

BTW, that owl with the pin-feathers still on? Adorable.

have both the Mojave and Se Gemini. What are your impressions?

Thanks!

Tyronelt looks like any other cat, only without the outer layer of hair. It's the
outer hair that makes cats look fluffy and hefty. Anybody who has seen a cat
wet knows what I'm talking about. Except most wet cats don't look as
cheerful as that Devon Rex...

Jimmy

>Sort of. There's actually no such thing as "Logical partitions". There are extended partitions which can contain any number of logical drives, hence you can get around the limitation by having a single extended partition containing 8 logical drives, and that partition will then give you 8 drives. It's more difficult to boot to a Logical Drive though.

You actually don't have to hide the other partitions though either, so long as you only have 4 partitions showing in total. You can if you want, but you have the option of having up to 4 Primary or 3 primary and one extended (containing logical drives) showing on any given boot.

This is how I understand it anyhow. I could be wrong as I haven't quite got it to work as I want yet, but this seems to be what I was seeing in the menus, and it does make some sense that just because you have an Extended Boot Manager, that Windows may still only be able to see a limited number of partitions.

Cheers,
Kim.

>2 MEC's, 2 EDS1000's , Windows XP.

When playing recordings back in Paris, i'm getting what seems like the obvious word clock pops *ONLY IN THE MASTER SECTION*

this is strange to me. I tried switching out the word clock cable between MEC chassis, problem persists. I even moved the word clock cable between the EDS cards to the other port.

Any ideas?

PS: I just got an Apogee Rosetta 800 on loan for a couple of weeks for another project (on another system), i even tried spitting Clock from that box into the rig and (while it sounded great) it still does it, however less frequently. I'm simply chaining clock signal from box to box by doing it this way, so i'm not sure if this is even going to make a difference without getting a distro box. Well.....hmmmmm. I don't own and have little experience with the U47. I've used one a couple of times. I though it was very flattering to to male,/female vocals and bass cab/upright which were the only things I have ever used it on.

About 4 years ago, Mike Claytor read the TapeOp article by David Royer and put one of these mics together. I ended up with it on a loan and used it on a female vocalist in a demo session. On her voice, it had that same rich velvety vibe that I remembered about the U47. I have used it on male vocalists as well. I liked it so much that I bought another one that Mike made. These mics are point-to-point wired through perfboard with Peluso capsules so this may set them apart from the Mojave mics which are most likely designed around prefab PCB's like the later Royer kits. I also don't know anything about the capsules that Mojave is using. I will say that the original Marshall capsules that were used in my mics sounded excellent. The Peluso capsules have a bit more detail to my ears. This is slight, but audible in the *car key* test. The Mojave has very good mid and HF handling characteristics and is very flattering to the human voice with a very warm

bottom which is, in the case of my mics, probably due to the Jensen transformers.

The SE Gemini sounds similar in some ways. The bottom sounds different from the Mojave, probably due to the fact that there is a tube at the output stage rather than a transformer. I haven't played around with this as much as I intend to, but I can envision a bit of variety by switching tubes. The Gemini has a bit more output gain than my Mojaves, but the self noise is just a low (both are very well behaved for tube mics). The Gemini has *lots* of low level detail. If expression is what you're looking for, you're going to get it in spades with the Gemini.

I heard an interview with Allison Krause's engineer once describing the way he used a Sony C800G on her voice and how this picked up every nuance. The Gemini has this kind of low level detail. The C800G is a \$5k microphone. At first I was a bit put off by the Gemini because it's so heavy. You need a moose of a mic stand to support it. I use a big Atlas boom. If you decide on one of these make sure you've got the infrastructure to use it.

I love them both. They have both done justice to vocals and instruments (the Gemini can be an awesome guitar mic when placed about 2' from the guitar due to its high output and detail-the Mojave usually gets the nod on upright bass) If I want to get the *breathy thing* going with a femme vocalist, I reach for the Gemini. Since the Gemini covers about 95% of what the Mojave does tonally, it might be a more versatile piece, especially since the tubes can be swapped out to taste.

Both of these smoke my Stephen Paul U87 for vocal tracking. It's hard to admit it, but I just keep the Stephen Paul mic around here these days to impress people. It's a beautiful and very *true* sounding mic and it still gets used a lot on instrumental dubs but it seldom gets the nod on a vocal session after a singer has heard their voice on the Gemini or Mojave.

Also, I'd say that though the Gemini is manufactured in Shanghai, don't let that worry you at all. This thing is beyond the Studio Projects offerings. SE doesn't appear to be trying to make *cheap mics* It looks and sounds like a quality piece. I can't really speak for the new Mojave's that are also being manufactured in China, but if they are anything like my hand made mics, they are wonderful.

It's really hard to believe that mics this good can be had for \$1000.00.

"Thought of a place for The Paris Diner-Greys Papaya 72 and Amsterdam-\$1.00
hot dogs-Pina Coladda drinks-

JMI just looked at mine. It was one of the first made. I don't see any foam.

Is that something they added to later versions of the mic?

Win XP machine. I run Paris 3.0 on a G4 Mac. If he brings
me a firewire drive w/ his project on it will my machine "see" it?

If not what do we need to do to make this happen?

Thanks!

GanttOw! Thanks for the warning!

Nah, it's just more detailed/clear, IMO.

NeilDJ, do you know if Mike C will do these mods for anyone else?
I'd like to mod a PPA 2ube for a lower noise floor and slightly smoother presence.
