r />

Major problem #2:

I wanted to send SMPTE to the MIDI Sport and thought it would be able to =
convert that
to MTC like the Motu box did. It seems it doesn't. I have heard that =
there is a way to get Cubase=20
to read SMPTE but am not sure how to do that. My other option I guess =
is to add a MIDI card to Paris and
another possibly to Cubase to allow MTC to do the syncing. More =
hardware I was hoping
to avoid for this task.

I'm about to try again. I'll come back for your response and tell you =
what I've learned.

Tom

hey tom,

i use the same box for both the mac and the pc. from what i gather
you're doing more than i am with the midi. i just have the one
controller (pro 88) that i use in both logic and sx for the vstis and
the m24 for logic though it can be used for either.

have you loaded in the sampler data crap...sorry i'm not at the puter
now and i don't remember the what the option label is to add specific
hardware for recognition.

" assign the output of my master keyboard>to Cubase, engage record and
yet no note data is present when it's complete.???"

are you sure you have the right order in what is designated as in of
out for...man i'm sorry. i'll have to go out to the studio to see
which is which. like i said it's been a few months since i used sx.
..and since the other

engineer hasn't been here to eff things up i
haven't had to fix it.
