Thanks,

Mikel'll sell mine. How much was it?

I have used this card as a VST System Link carrier on a PC running Nuendo 1.6, connected to another PC running Nuendo 3, using the ADAT ports of a MOTU 828 II, and it worked perfectly, if that helps any. I soon realized that I am not DJ, and don't need the multi-PC nightmare, and relegated the 2nd PC to office duties, freeing up this card. Like I said previously, there are only 2 TOSlink connectors on this card, but the driver/control panel allows for internal sync, or sync to ADAT input, if necessary.

Hope that helps,

Larry Upton

installs very easily) - make me an offer and I might just toss these in.

Runs OS X Tiger (not included) or OS 9 (for Paris!) - Has 4 PCI slots.

\$650 obo

email justin@jyaf.comhi larry- is your EDS1000 card in good shape? no damage to the ethernet port?

my card has some damage to its ethernet port, which makes the C16 a bit finicky to operate, and i need to send it out to be fixed- but before i do that, i'd like to have a second card i can use, in good working order, so i won't be entirely left without the use of my paris system, while things are being fixed with my other card--- please let me know if all is well with your card---
