e run Live and SX on a laptop with Server 2003. This was

the 32 bit version. It spat at me a little getting the hardware set up, but

once I did it worked great. I think Server 2003 is the current 'sweet spot'

in the M\$oft line. It has most of the really good new tech and not much of

the horror show that is Vista.

I still run Debian on all of my non-work/non-music computers, but if you

have to run Windows it's probably the way to go,

Most editors/production companies I know are using Decklink, Aja, Avid, etc for I/O.

The downside a director-friend of mine noted with the MOTU unit is that it uses DVCPro for compressed HD (instead of Apple's ProRes for example), which isn't really a video mastering quality format. Jamie might have more thoughts on it.

Certainly looks cool though. ;-) One thing MOTU does really well - they cover a lot of I/O options. I'm impressed they've made a move into video with what appears to be a rather extensive I/O unit.

Regards,  
Dedric

-v3hd-audio-video-interface.htmlHi Dimitrios,

I'll have to see how to de-authorize it. I've not even 100% sure it works at this point. Haven't been able to test it in a compatible system in a long time.

I'll be able to deal with all that after I get back from AES and vacation. So after the 15th.

Or Peter Gabriel's 4th album (otherwise known as "Security"). Amazing stuff - pretty much no cymbals anywhere.

I'll also throw my 2 cents into the Steely Dan thread - I never understood the appeal. I just plain don't like anything they've done.

Of course, I also just don't get the Dead, either. Sounds like 8 guys on stage, all stoned out of their minds, all playing a different song to their own internal click track.

Oh, wait. That's exactly what was happening on stage....

;-P

pabhave a look at this beast. Anyone into video post??Just when you thought Motu maybe down. Just my thought,I think it would be a great move if Apple aquired Motu.

<http://www.gearslutz.com/board/new-product-alert/133651-motu-v3hd-audio-video-interface.html>Consider yourself shunned... ;-)

David.

gasp!!!!.sputter!!!.....you don't get the DEAD???.....here...take this  
little purple pill and don't drive for the next 10 hours .....Hey Jimmy,

Nice to hear from you

That's right! I forgot all about that - Gabriel hates cymbals  
even more than Fripp does!

NeilReally? Man, their plugs do sound good..

>I have many of the same problems... and I know it is not me... cause I have zero problems accessing anything else... this was also why I suggested vbulletin in an earlier post... a few on here about wanted to start a fuss just over the suggestion...

It won't be long before this will all move on to something else anyway... so I suppose no one wants to move up to the twenty first technical century... I occasionally weed thru the b.s. posted and hopefully find something worth seeing that is Paris related... but that hasn't been too often lately... I think the for sale side is really what keeps me coming back... But I too will move on to something else soon.

I am at a point where I am willing to try some firewire options and linux is looking promising more and more as I read and
