target="\_blank">http://apnews.excite.com/article/20050822/D8C4U4480.html....so i guess the  
question is whether the ada8000 sounds any good r whether  
its practical to record simultaneously on 2 eds1000 cards, just to get enough  
inputs...(Mec + 2i/o on one eds, and 442+2i/o on the other...)....sorry i'm  
getting off the subject a bit!? not following your logic here... the MEC with two input cards gives  
a full 16 inputs to the first submix, the 442 will only give you a

total of 6 inputs for the second submix using SPDIF as well. This gives you a total of 22 possible inputs.

David.

Windows XP. It's called Out Wire. I don't think it's available on ME / 98SE  
(though it may be possible just to extract these plugs from the subsystem  
and use them on 98, I couldn't vouch for that though...)

Hope this helps.
