DP and Logic aren't alone there.

Jamie - side bar question, is Logic 8 now completely Cocoa, or is it still Carbon?

Sure they can.

MOTU has a great sequencer that was already priced at \$500 long before Apple came down to that price.

MOTU has some very capable software instruments and they work with anyone's sequencer including Logic and DP.

And MOTU has dependable, workhorse i/o hardware.

MOTU can sell hardware/software bundles with DP, and they can sell instrument and hardware add-ons that work with any sequencer. A lot of the basic R&D costs should be recouped by now, they are in a good

True. And Live and a few others. Choice is good.

Stupid people would listen and abandon the platform. There is not one size
that fits all, people like choice.

I thought they should have bought Steinberg, MOTU over Emagic, but hey, it's
all history now. By the way have you seen Apple stock prices lately? They
must have made some right choices. I wish I would have listen to myself
and bought when they dipped below \$14.00 a share. The stock has split at
least once or twice since then. Oh well.

Apple had one 2:1 split in early 2005, so if you bought the stock before then (say in the high 20's) the current share price should be doubled, so you've had a 10x return in less than three years. It's also trading at 44x earnings right now, while HP, Dell, and MSFT are trading at less than half of that, so you have to be a real believer in future growth to be a buyer today. However, I wish I had every penny of my money in AAPL since Jan 1 2005, even if I can't stand their operating systems.

>Hi Mike,

Yes this compressor on fast times sounds cleaner than the stock one !!

Nice !!

Can you please add a dry mix on the compressors ??

That should have the 2 samples latency as to be in phase .

You know all ensoniq plugins introduce 2 samples latency !

That would make a very very important addition !

Thus you could add (in phase) some uncompressed signal along a squashed one

!!

I would love that !!

Also it would be handy a simple latency adder !

That is if you wanna put a couple of compressors on kick and snare and keep the drumtracks in phase you could put the latency adder for the 2 samples each introduces and not charge the Eds cpu !

Keep up the great work !

Regards,

Dimitrios

---=_linux4707d34c--Sarah-

This sounds 100% like a Saratonin tune. Like nothing else.

Kinda like Macle sounds 100% like Macle.

It's a rare gift to sound completely original and unique and authentic at the same time. I love it.

-stev
