Chris, I'm with you, I think it will bomb, but I think they will sell a bunch at first. It's kind of weird, even psychologically it seems like your not getting as much for the money because it's so thin. For the last year the Apple TV bombed because it wasn't HD, now it is. Hopefully they will update the MacBook Air sooner than later. I'm glad I didn't pay thousands to be at MacWorld, what a disappointment.

Ahha

I know of a lot of people that are running OSX on a Dell, and many other
PC's as well...including yours truly. Typing as we speak on one.

Martin HJamie,

"Don't audio unit plugins get their own address space (I don't know, just >wondering)? "

This is a good question, and the short answer is no AFAIK... Plugins live within the resource constraints of the host application.

Chuck

- standalone
- mode, and can circumvent the limit within 32-bit hosts running on a 64-bit
- Mac and use the extra RAM. The host still has the limit and other plugins
- are limited to the usual 3.2G or so.

Afaik, this is the only VSTi plugin at the moment, other than some standalone options, that can do this.

for ram and processor compatibility. The Kingston memory is not an exact match. I'm looking at: KVR800D2K2/2GR and Gigabyte recommends: KVR800D2N5/1G. Do you think this is OK?

I'm probably not going with the Cooler Master psu, but does will 500W be enough? I'm planning on running two more hd's (audio and backup drives) and one DVD rom player in the box.

Thanks amigos

MRHey Chris!

Thanks for the response. I'm trying to put together an audio machine to run Reaper. I was looking at that biostar board, but changed directions pretty quick. I posted a parts list, as a new post, just a little bit ago.

Its always kind of daunting to build from scratch, but I had pretty good luck building my Paris rig, so I'm plugging my nose and jumping in!

Awesome. Oh and it can be over clocked but I'd get a 3rd party heat sink
if you wanna try that.

If you are looking to make the machine quiet then I'd highly recommend
the Noctua NH-U12P CPU heat sink whether or not you are over clocking.
Also their Case fans are the best ones on the market.

> 39.99
>

If you plain on filling up the hard drives and PCI/PCI-e slots then I'd
yes you will be a bit more juice. You can get quiet power supplies in
the 650w and 750w range.

I'd recommend one some of the Thermaltake, Corsair, Antec models with
cable management.

> GIGABYTE GA-P35-DS3L LGA 775 Intel P35 ATX Intel Motherboard - Retail

> F2
> 89.99
>

Good board choice. We use the the big brother of that board the GIGABYTE
GA-P35-DS4 Rev. 2.0.

Do you require Firewire. The DS3L does not have it.

If you do and you don't want to use a PCI PCI-e slot to do then I'd
recommend the board we are using. It uses TI firewire and works quite good.

I'd go for OCZ, Super Talent, Corsair, Crucial brands personally. Get ones that CL4 at least. This will give a little better performance for VSTi and low latency audio.

New Egg has decent prices and very good over all support for a large online part company so I would say you should be fine ordering from them.

You don't mention the Case or the video card. Your old video card WILL NOT work. If you are reusing an old case make sure it is a mid-sized or full sized ATX.

Also current motherboards only have 1 IDE port. So only 2 IDE devices can be attached.. You will be using one of these for your DVD/CD drive. Your audio. Samples drive will need to be SATA. IF you need to buy new ones then the Seagate 16meg and 32 meg cache drives will be great choices.

I'd recommend these fanless dual head video cards.
GIGABYTE GV-NX86T256H GeForce 8600GT 256MB

chrisl@adkproaudio.com <mailto:chrisl@adkproaudio.com>

www.adkproaudio.com <http://www.adkproaudio.com/>

(859) 635-5762 Okay, went to one day of the NAMM show and said
bugger it, and grabbed the family and went to Havasu.

Man, I had actually forgotten what nice air smells like...

I have to get out of SoCal more often. This is cool.

Going to see London Bridge and the river tomorrow.
The Colorado river is one of the purest, beautiful,
almost elemental things on earth.

Then on Monday we head to Quartzite for the gem and
mineral show. Need some quartz to go on top of the
studio monitors.

Take a break. Get away. I'm glad I did.

NAMM-schmamm One day was enough.

Great show, saw some old friends (man I miss running into
SSC at shows!) but even on Friday there were too damn
many people there. Business-wise a good show for the
vendors, said everyone I spoke to.

Big news? umm yeah... Gibson and TC are doing a merger.

That's right Gibson guitar, as in Henry's company, and
the Danish outfit TC are merging.

This cannot be good.

DCIt seems you're using a Plextor burner with their Professional
software? As far as I remember, there's standing plenty about these
things in the helpfile. I have 2 Plextor 755A and found out that the
best recording results for audio was with 16X speed on Verbatim cd's.
I also remember Brian T reported 16x was giving best results with his
"newly buied" Plextor CDburner some years ago.

Thank you for responding. ALL of the feedback will be very helpful. I really
appreciate your expertise. Regarding the ram, I'd rather go with Crucial,
but the Kingston was the only stick I could find that was close to what Gigabyte
recommended. Is it critical to only get the sticks on their list, or can
I change it up? I also thought about getting a vid card, but, for the moment,
I'm going to hold off -budget issues.

Once again Chris, thanks.

>(859) 635-5762That sounds like a great trip. I've never seen that bridge. The idea
makes me smile. We Americans are funny people. Definitely a must-see if
you are in the area.

I don't see why there should be a problem with those 2 companies merging. I'm sure it is motivated by Gibson's desire to move in more digital/modern directions, which does not at all bother me. If they get their wireless technology working well and affordable it would be a real time saver for musicians and sound people who do frequent hit and run set ups.

Personally I love what digital technology has done for the guitar. I use modern digital modeling and effects technology powered by good old fashioned vacuum tubes and beefy power transformers every day in my guitar rig and it works beautifully, giving me the best of both worlds: versatility and great sound.

eir list, or can

> I change it up?

Yes Crucial will be a good choice. Being on the list is not very important on the Gigabyte board unless you plaining on some extreme tweaking for gaming.

> I also thought about getting a vid card, but, for the moment,

>

What are you using for video then? There is no on board video and no AGP port.

No exchange for the iPhone, but apparently its getting a notes client.

Anyway, here's HTC's attempt at some iPhone like features :-)) I have last months HTC and it is pretty damn cool.

ChuckHey Chris.

Doh. I was never real good at reading directions. I'll have to install a rubber band on my wrist when I do the build and snap it every so often. As I didn't factor the vid card into the budget I have to go with something a little less expensive. I'm looking the Chaintech GSV73LE, the Gigabyte GV-RX24T256, and the quiet inexpensive (but generally well reviewed) Asus

EN6200LE. No games on the computer only the "daw game" Reaper. I think these cards are ok??

Yeah, Microsoft "borrowed" some graphics from OSX for Vista -- not the

only thing graphically that looks "borrowed".

pabHenry J. from Gibson is a notorious bozo.

The concern from my end is that he doesn't "brand manage" TC's various companies into the can. We still don't know who is really running things, so there is hope, but the big question is who will influence whom.

We're off to the river!

>This is a great example of what blows my mind about Apple. I understand they
want to be a boutique, nichy kind of company. Their add campaigns scream

this, hip, relaxed Mac user is \$350 designer jeans in contrasted with balding, portly, half wit in an ill fitting brown suit. Apple has zero chance in the big iron in corporate America. It's all Unix/MS Server 200X at the OS level, Oracle/MS SQL Server for databases, and IBM/Sun/HP/Dell hardware. And, of course Exchange for mail.

But again, what blows my mind is it seems that Apple actively _antagonizes_ corporate users. Sure, they don't want to be 'tainted' by the fat guy in the brown suit, but hell, my money is as good as the money in the pocket in the designer jeans, and if I want to spend it on an iPhone why make so bloody difficult to get it and use it with our gear?

This all might be moot soon, of course. Exchange 2007, while being a typical toad of a M\$oft 'upgrade,' has a _stunning_ web mail client. It's so good I wonder if we're going to install desktop Outlook clients when we make the leap. It's really that good.

TCB

P.S. As an aside, I have met some stunningly beautiful, stylish, interesting women working in the finance racket. I think it's proof that everyone likes money, so this job isn't all fat guys in brown suits, though there certainly are plenty of those as well.

That is not just bad news, that is vary bad news! You would think by now these companies would stay the hell away from Gibson. Dumb move!Finally getting a look at PT - I've briefly glanced at it in a few other studios, but... well... just never needed to use it before. So, I open the bugger up, and whoa - what an ugly, lifeless interface.!!! Paris has a lot more soul to my eyes. Do they make other skins for the PT tird? :) Just my opinion.

-Carl<http://www.youtube.com/watch?v=oQbnPqimRiQA> lot of folks are saying "this could be a good thing, look at the good influence and product TC could bring to Gibson"

But it sure didn't work that way with Chrysler and Daimler did it?

Seems like bad leaders and a problematic corporate culture are never solved by mergers. A takeover and a total house cleaning of execs? Perhaps, but I don't remember a merger that fixed a problem leadership or culture.

Saw Parker Dam today. Just gorgeous and since it is off the beaten path, almost deserted. Well, except for the two armed guards and the netting all over the lake side of the dam so ghouls cannot drop a demo charge down against the dam underwater where the force will be directed into the dam by the water...

sh*t

Oh, and you can't walk across the dam anymore, and there are serious concrete obstacles to negotiate around to keep out the truck bombs.
