-----=_NextPart_000_00C5_01C8171F.54F38690--Melodyne works similarly to how you're working with Autotune currently.
Melodyne will not "adapt" to any edits in real time. Rather, you "record"

the
audio you want processed and then apply the parameters (% of correction and
drift) and process. The pitch corrector that comes with Logic is a real time
app as well.

If you then edit the track on the timeline, you need to re-capture the audio
to be
processed in Melodyne, because you will h
