n that hill for the Marzipan goat?A little more research tonight....

- 1) If you take a senderella send from submix 2 and return it on submix 1, there is 1986 samples of latency.
- 2) If you take a senderella send from submix 3 and return it on submix 1, there is 1988 samples of latency
- 3) If you take a senderella send from submix 3 and return it on submix 2, there is 2002 samples of latency

This is interesting, but also not surprising. The reason for this is that Paris processes its channels is a submix by submix fashion and with a single thread. Thus, by the time the thread gets to submix 2, submix 1 h
