>Error Initializing Paris Engine: Error Code 7/7 error 7/7 means
that paris can't see the EDS card

(1) The EDS Card is loose

-or-

(2) IRQ resource conflict

The MEC will flash until Paris has booted up, so that is normal.

You're turning on the MEC first right and giving it 5 seconds before turning on the PC.

arpet hurting the mids somewhat. What about thick cloth? This cloth doesn't appear to be dense, but it's got a kind of backing sponge. I suspect that even 2-4k would pass through alright, which might just get me to tweeter territory...

Other options include just getting some color keyed paint and painting the speaker grills or whatever to make it look like it belongs. Mmm.

Any general stories on how you guys have handled car stereos would be appreciated.

Cheers,

Kim.The Sixx AM release. True enough, the mental material is depressing and dark, but the sound has just got to be analog. Anyone in the know, ...

well.. know?

I'm wondering if this is a high sample rate, killin' convertors and a Portico. If it is, I'm totally sold man. That sound just can't be pro tools, somebody tell me it ain't so.

Inquiring minds wanna know, what 'did' those guys record that album with?

AAI am trying to get a subtle stereo vocal sound like the one in this link below. Can anyone tell me how they think this was recorded and does anyone have some tips to take a mono vocal and get it to simulate this sound.

It's not real obvious when listening normally but if you use headphones and the Kelly Stereo tools and pick the preset "Mute Left Center Right" or "Mute Right Center Left" it will take a channel like Left and put it in both channels or right and put it in both for a mono effect. Switching this back to default (stereo) makes the subtle stereo effect very obvious.

I have plenty of reverbs and delays if you have things for me to try. Maybe it's not possible and I just have to record in stereo. Do you think this vocal was recorded in stereo or what? Thanks.

Vocal

I'm very upset they are showing its unconscionable level of suck by publishing
these tests, as they might convince people who do not own one to change that
fact. Leave them in the hands of those of us unfortunate to have been swindled
by Focusrite. Please.

have fixed it. Same deal.

Gosh damnit. ;o)

I'm just going to be really annoyed if I buy a new MB and that's not it.
I've tried a number of things here, many with some confidence of a result,
but nuttin' worked. I've got \$4500 I plan to spend on car restorations in
the next 6 weeks. I know a MB is only \$70 but I'm runnin' on empty. ;o)

But what I wouldn't do to get Paris up and running. I'm almost considering
loading Reaper to get some stuff done... :oS

Cheers,
Kim.

>Hi Kim,
I tried to respond to another post on this a while back
and got a posting error, I hope this one makes it.

We had some rigs that would get into a 7/7 error mode,
this always means the hardware cannot be seen.

We would use a pencil eraser on the contacts of the EDS
card and clean out the pci slot the best we could with a
De-Oxit type of spray . That usually would do the trick.
In a multi card system - do one card at a time :)
I hope this helps :)

I've got a Red-8 & an ISA 428, and i love 'em both!

NeilSo..... ;o)

It occurred to me that I should put more effort into resolving this on the existing MB. Just after some comments if you have any. Currently Paris attempts to load, the MEC or 442 starts its "boot" and stops right at that point where the internal sync light and the 48k light come on together. They stay that way for far too long (compared to "normal") and then the 7/7 error appears. IIRC that phase is when the MEC is actually attempting to make the audio link with the EDS card. Presumably this is when EDS comms are going to suddenly increase from some minor discussions about the boot process to an actual stream of audio data traffic, so I can see that an IRQ issue might cause issues at that point.

I'm currently exploring the idea that it's just an IRQ conflict, which seems possible.

(*) I've noted that my "working" Paris install image is in ACPI mode. I'm just changing to Standard PC to see if we can't sort some stuff out because...

(*) I noted that the Scherzo driver was being allocated to IRQ 19 by Windows. It was on its own, but that's not the real IRQ (which was 5, but I've moved it to 7), but a virtual Windows one. Why Windows made this crazy allocation I'm not sure. Hopefully Standard PC mode will put it back on 7.

(*) I'm thinking of doing a BIOS reset, or indeed reload, in case the crazy MB has done something silly here.

In any case, the install image used to work, so this ACPI thingy doesn't seem the likely cause. A BIOS reset may do it. Or it still could be a MB

hardware fault.

Annoying... ;o)

Cheers,

Kim. I'm still in the Guliani camp. We need a liberal who isn't a total idiot right about now.

;o)

Modern computers
can assign 24 or more "real" unshared IRQs that map directly to the slot/letter
combination of the card.

Eben if they are shared, it shouldn't be a problem. Sharing support is required
in all PCI drivers, and it is literally 2 or three lines of code. It would
be very unusual if a card's driver didn't support sharing these days.

Have you tried deleting any default project that you have? I apologize if
that was suggested/tried before.

Good luck!!

You should have trepidations about being the first one to do it lol!

NeilThanks !!!!! Thanks !!!!! Thanks !!!!! Thanks !!!!! Thanks !!!!!

Thanks !!!!! Thanks !!!!! Thanks !!!!! Thanks !!!!! Thanks !!!!!

Thanks !!!!! Thanks !!!!! Thanks !!!!! Thanks !!!!! Thanks !!!!!

Thanks !!!!! Thanks !!!!! Thanks !!!!! Thanks !!!!! Thanks !!!!!

Thanks !!!!! Thanks !!!!! Thanks !!!!! Thanks !!!!! Thanks !!!!!

Thanks !!!!! Thanks !!!!! Thanks !!!!! Thanks !!!!!Guys,

After thinking this through a bit more, I realized that my carefully conceived plans took everything into account but Crash himself. He doesn't really take well to being handled by strangers and it pretty much subject to copping a very uncooperative attitude with stuff like this when put in an unfamiliar environment. Stressing him to this degree on top of a long and uncomfortable vehicle trip and then putting him in a situation wherein some stranger is poking and prodding him will just not work and what will happen is that I'll be in Denver, on the cusp of a weekend, needing to hire some vet who is a stranger to come over to this facility to give him mild sedation. We have a local vet who does housecalls and who Crash likes come over here and help us do the whole procedure here. Once the brace is fabricated, if it has problems, then I can bring him to Denver for a

retooling session without introducing him to such an ordeal. These big dogs are surprisingly fragile when it comes to stress and all sorts of negatives can result.

Maybe Aaron and I can plan a Denver, part 2 next spring, or we could all get together here or in some other cool place like Taos or Sante Fe and have some fun.

Just wanted to let you guys. I hope this didn't hose your plans for nnext weekend. I know some of you cleared the decks for us so I wanted to let you know ASAP.

DeejWow, John! I guess I made your day.
