Chainer (wrapped with Spinaudio again) has a latency of 4096 samples. This is free still in beta version but works fine (only from inside chainer) It must sound stupid to have to wrap chainer from Spinaudio and then load multifixvst from inside Chainer, but if you want low latency (remember 2048 latency) you do this once and then just open the Spinaudiowrapped chainer and load multifixvst.

Because of the lower latency you can hear the UAD effect without having to compensate before you hear if you like it or not.

Remember do NOT put multifixvst right from inside Paris alone with no chainer because it will crash Paris, and probably you will have to reboot then.

I will get in contact with the author for any updates of it.

Regards,

DimitriosThis is a multi-part message in MIME format.

Rod,

I have removable SATAs in my comp. I wanted beige and got them.

The second pair I purposely bought black to differentiate them.

Sometimes it's a good thing. XP black, ME beige.?.

Tom

s you are sending to reverb (here I use Plate140

(ok I just got the demo playing))

So on track 1 I use kick with chainer and then inside chainer senderella1 as send

Track 2 is snare again I put chainer and then inside senderella1 as send again.

I use the desired amount in sending from inside senderella.

Then on tracks 15 and 16 (i chose those because they are last and more easy to figure out and also senderella sending must always be before senderella receiving.

I put there 16 bit mono Paf silenced files.

I open as stereo chainer on track 15 (on par with 16) and put inside senderella1 as return.

Then I put UAD1 Plate140.

Now I choose two things to do :

1) I either use from inside chainer the free multifixst which lowers UAD latency to 2048 samples which is almost adequate for vocal reverb because you need some 40ms predelay.

If that is too much I then do this nice trick !

2) I put after senderella1 send on each track (kick and snare here) the voxengo sampledelay for 2048 if I use multifix, if I just use chainer then 4096 or more for effect.

The trick is to put on every other track (without chainer if not needed) the sample delay to delay the res

Thanks.Yeah you are the second guy to remind me of these
Although once a lunchbox is purchased the API stuff is cheaper.
Also, after a few years or working in a studio with a NEVE board as well
as doing some stuff on a Tweed, I think I want ot move away from Neve for
a while.
