What I will do is compile my version of the compressor, and we can see if
it makes a difference. There may be bugs in the mac driver, but I'm hopeful
everything will work the same on the mac as on the pc.

All the best,

Mike

actual fade-in. It's like

Jam (or Paris, in creating the .wav?) doesn't recognize the sound as sound
until it reaches a particular volume level. I've tried several things, but
to no avail. Any ideas for a workaround? Or should I try a different program,
other than Jam?

Thanks,

Dale Does the .wav sound right in the first place, before burning the CD? If
so, use a different program for the CD.

would be
willing to donate \$\$\$ to the cause. Appreciate the Paris community. As usual
you guys are all stellar.

>> TCBHi Everyone

I'm building a new house and want to wire some in wall speakers myself. I'm
probably going to use speakercraft aim 7-3's in the ceiling and am looking
for a place to get 16 gauge 4 and 2 conductor speaker wire at a decent
price. I'm open to other speaker suggestions if anyone has some ideas. I'm
really crunched on time because the drywall is going in shortly.

Thanks for the input.

Barrygreat job on getting these cool new effect mike. the new plate is really freeking amazing.

hey so i was messing with this new compresssor.

the mix knob is a GREAT feature. but it doesn't work right. or at least it doesn't work the work I THINK it should... which may not be right.

set it up so you have NO compressrion going on. threshold at 0 and ratio at 1:1.

the volume is the same when mix knob is at 0 and 100.

but when mix knob is anywhere in between the volume is louder. most obvious when the mix knob is at 50... of course.

shouldn't the mix knob be balancing the 2 signals evenly?? so when the mix knob is set to 50... you get the same overall level... but with 50% no effect and 50% effect.

jeremy

This NG is great. I must have been close enough to the screen to get the
wisdom of others before they typed. I heard loud and clear check the other
card.

thanks
