uld find a way to max it out
too.

I too am interested to see how the Intel Macs shape up over the coming months. Hopefully it's a noticeable and worthwhile improvement. I don't think any problems we've had with my wife's Mac were OS related, but it isn't pushed too hard. Still the OS seems to be stable and smooth (10.4) so far.

BTW - I hear Bill Gates is stepping down from day to day operations of

Microsoft to spend more time with his and his wife's foundation. Good for him. I would have thought he would have taken the step sooner, but I'm sure it's hard to step away from a company you built, even if you are the wealthiest guy in the world(?). Wonder if he would like to invest in a few businesses represented here on this group? ;-)

Regards,
Dedric

Hey, it's old school mixing! There may be a meter bridge in the future.
People are already talking about retrofitting automation, but I wouldn't plan on it.

It sure would be nice to have a really nice sounding analog desk with full touch sensitive servo automation and midi mute automation. Since I'm dreaming, I might as well say all for under 10K;)

I was gona say the same as Dave and considering the fairly accurate reproduction of the Piano tracks he sent me way back when I would think they would do a pretty good job as OH's

I would certainy snag a pair if I was actually recording anything anymore

;-)

I have the song segment within the left and right boudaries, but I did notice
that when I put it to the far left it turns into a "pen". I will try experimenting
here.
Thanks so much for your input.

border, ctrl-click to set the right. Quickest way to set it without finding
the existing borders and dragging.

If you have the ranges set, you should be getting a mixdown of audio in that
range. Be sure to check what outputs you are mixing down in the mixdown
dialogue window (don't assume SX sets this correctly, or keeps the setting).
You might be mixing down a silent buss inadvertently.

And then, you pulled into a gas station. The pump said "eythl", and the price was 98 cents/gallon.

wwoo eeee OooOOOThanks Dedric
I knew you'd pop in and save my convoluted explanation.

I mean
>Chris,

If the mobo uses the same chipset, you can sometimes pull this off. I successfully migrated my system drive from a PC using a VIA KT700 to a VIA KT800 chipset with nothing more than a driver update. If you're switching to a mobo with a different chipset, this may not be possible, but you can try it. Just Ghost your system drive before you start fooling around with uninstalling the current chipset drivers from your system drive, just in case you need to
