lank">rlincoln@nospam.kc.rr.com> wrote:
>
>You say this is a Windows ME machine??? Does it work O.K. as long as you
don't
>put the thumb drive in it????

Rod, nope, all of a sudden something's messed-up with the
Active Desktop (I'm pretty sure I've narrowed it down to that,
or perhaps a graphics-related issue but I haven't figured out
what the remedy is yet).

Here's what happens:

1.) PC boots up fine, no probs, Windows launches normally.

2.) Programs/applications, including Paris, all appear to
launch just fine (tried starting a number of them to see if I
could get any of them to glitch... this PC's pretty stripped-
down, so there's not many things on there) EXCEPT (so far) for
an item in the Control Panel icons called "Intel Graphics",
when I double-click on that one I get the same error as when I
right-click on the Desktop - that error window states: "RUNTIME
ERROR - Explorer has encountered a problem and must shut down."
(might not be the exact phrasing but that's the gist of it).
Now, I don't HAVE an Intel video driver loaded - at least not to
my knowledge... the card has an ATI graphics package, so maybe
I need to look for an Intel video driver somewhere &
disable/unload it?

3.) Oddly enough, if I open a window such as "My Computer"
and then right-click inside there, I don't get the same problem
(which was the same runtime error as I mentioned above). The
error upon right-clicking only seems to occur on the active
desktop. I can right-click inside a window like "My Computer"
or "My Documents" & create a new folder & whatnot with no
problems.

Which I suppose, is not as big of a problem as I first thought,
but it's still weird, and since I tend use the right-click
function a lot, I need to figure it out... that's too much of

a habit for me to break at this point.

Anyone know if the "Runtime" referred to could be a Java Runtime error? This PC has an older version of the Java applet on there, but since it will probably never see the internet in it's current configuration as a Paris PC, I could probably completely unload the Java stuff without any problems, yes?

Or is the Intel video driver the most likely suspect at this stage & I should try to find that one & disable it?

NeilWonder if it could be the time-stamping or any other features of the Broadcast wav vs. regular wav files that's causing the issue?

Would it be possible to have your Nuendo guy export them as regular wav's?

Neil

Broadcast wav files and I had no problems.

Have a hunch it has to do with a batch of questionable plugins I was given
to "try out" There gone (didn't like or use them anyway so no loss)

I'll keep you informed.

when I double-click on that one I get the same error as when I
right-click on the Desktop - that error window states: "RUNTIME
ERROR - Explorer has encountered a problem and must shut down."

Neil.....if you can click on the desktop and on this icon and get the same
error, I'd say you've found the gremlin. I'd uninstall the Intel thingie and
see if this clears things up. If not, your graphics controller may need to
be uninstalled/reinstalled. Graphics cards are usually the culprit in this
kind of situation.....and they respond well to 9mm *accellerators*.

;o)

:)I've been trying to reach my studio partner over the last week or so.
Nothing important really.....just to let him know that I was
still waiting on a few things to trickle in so I can finish up the new
studio confuguration before we start our next project. I hadn't heard from
him but he's a touring musician and also has some stuff going on with a home
building project in Hawaii so I figured I'd hear from him when he had a
chance to come up for air.

I just got a call from him. He was at our local hospital in the ER a week
ago Tuesday due to his wife having some problems. He started getting a
severe headache and then collapsed and started convulsing. They were on it
immediately and a spinal tap showed he had lood in his spinal fluid. Further
tests confirmed that he was having a cerebral hemmorage. They called his
family in Oklahoma and put him on a life flight jet to Denver with a 5%
chance of survival. His brother is a trauma surgeon in Oklahoma city and had
already told his parants to prepare for the worst because the chance of his
waking up were around "zero". Everyone flew to Denver to wait it out.

Instead of an arterial bleed, it was a vein. The bleeding stopped on it's
own, without surgery and he's back home and though a little weak, he's

entirely normal..brain function 100%. The doctors said this is pretty much unheardof...a one in a multimillion outcome and that he should just go on and live his life. The chances of it happening again are about as remote as his chances were of survival when it happened.

We figure there's a song in there somewhere.

;o)Know any dedicated Giga PC builders?

thanks!

DC

>Yeoww! Great story.

I have O- blood which means I can donate to anyone, but only O- can donate to me. So when my Dad decided to head-on (apply directly to the forehead!) a car in the middle of bumf*ck Indiana in 1962, and I broke the winshield with my face, they had to fly in some blood. It was probably infected with Hep C.

Fast forward 35 years. Doc sez "OMG you have Hep C antibodies!!.

Gotta do more tests but you probably have it. Not a good thing.
So he does a genetic screen and there is no Hep C genetic material.
None. What this means is that I had it, and beat it. It's 100%
conclusive and very rare to do that.

I had to change docs a while back and the new doc goes OMG you
have Hep C antibodies!! and I try to tell her that I don't have the
genetic material. She smiles indulgently and tells me I am getting
the test anyway because the first test must have been wrong. So,
we do another genetic test. She calls me back "you don't have any
genetic material!, no hep C"!!

And this is basically the sequence of events whenever I have a new
doc...

The good side is that the blood bank, which used to bug me every
4 days for blood (being I can donate to anyone) and were often
quite insistent (can't blame them), now run screaming from the
room when I reveal that I have Hep C antibodies. They don't even
CARE that I beat it and am negative. No more calls from the
vampires!

Glad your partner is OK!

>Deej,

What a great outcome. You couldn't pray for better. Congrats to your partner.

Don't be surprised if he has a somewhat changed outlook on things. I know that I did after surviving a horrible rollover thanks to some jack**s that had to speed on a wet road and lost control of her car.

Read after me: Every day is a good day...

Very happy to hear the good news.

Take care!

Mark

a Magma, the other in a PCI slot of my mobo) and 4 x UAD-1 cards.

Solid as a rock so far. I'm gonna kick it around a bit tonight and see what
I can do to make it crash.I like 'em. I know we've already discussed the 33609, but I'm getting into
it tonight and it's a killer compressor for drums.absolutely wonderful. I'll
be staapping it across the Paris mix bus before long (because I can strap
any plugin anywhere I want no with the Scope routing ;o) and we'll see how
that goes.

The 1081 has that same mojo as the 1073 with more flexibility. The 1073
still seems to have the freq bands just nailed for drums, but the 1081 does
too.it's just a little more flexible and a bit of a different color.

Of course, since I had a $100.00 credit from way back when I bought another
card and I got the $149.00 discount coupon because I had previously
purchased the 1073, I now own both of these, otherwise I'd be.....well, you
know.

;o)"DJ" <nowayjose@dude.net> wrote:

Needing to die?

:)OK,

I made it crash, but it was by dropping/replacing numerous UAD-1 plugins on various tracks in rapid succession during playback while lots of plugin windows were open. The Neve 1081 seems to have finally brought things to a halt (screen freeze) when instantiated during playback with the UAD-1 resource meter at almost over 70%. Still, this could have been a graphics glitch. There were lots of windows open onscreen.....lots.of them and this platform has put up with things that I could never have gotten away with with the RME cards so the *putting up with abuse factor*/driver stability is high so far.

NeilMixin' and kickin' are synonimous around here. I'll be getting the whole mojo working over the weekend but so far, I'm pretty pleased. since mine was shipped 2nd day air, that means it left NY Tuesday. Your card stands a chance of arriving tomorrow if it's UPS ground

------=_NextPart_000_005F_01C70A17.373B7EC0--hey DJ, I know you guys don;t care about this in your set up,
But did the latency change in the newer UAD updates?
I think it was Tom B who was having this issue a while back.

C

Well, you could come up with a song pretty easily:

Sung to the tune of "Casey Jones" by the Grateful Dead:

Blood on my
