>Hi,

I've got an old Panasonic Toughbook and I'm thinking of loading it with Linux to make it my future workhorse. It's a little slow for XP, and only has 128MB of ram and a 300MZ (I think?) processor. I'm hoping a Linux install might allow state of the art functionality without hogging resources. I could upgrade to 256MB of ram if required, but that's the max the machine will take.

Anybody h

So my Distressors aren't supposed to have midi I/O after all?  
Damn!!!.....and I had the chain saw all warmed up and ready to do the mod.Hey Paul,  
Yah, I saw that, bummed me out. The U2 tune put me in such a good place, I  
just told my brain just to go on about its business and pretend it was  
Madonna that had done the remake. Whoever came up with that "great idea"  
oughta be slapped. Adults are such jerks sometimes.

Hope you're well man.

MR

No worries, Apple has a history of supporting past systems for years.

By the time they no longer support universal binary updated versions that run on PPC, most people will have likely updated their systems for other reasons. And the universal binary version before that will still work fine if there's anyone who hasn't.

Cheers,  
-Jamie
