I have a Central Station and love it FWIW. All switching is done with sealed silver contact relays and the DA converter sounds nicer than the MEC outputs. Probably not as nice as a DAC-1, but still quite good.

I've heard some good things about the digimax LT. Basically that it was solid for the price. I have a friend who actually really likes the Mackie Onyx 800R. Maybe a little more money, but supposedly sounds pretty nice. I need to get over to his place and check it out for myself. Anyway, try to buy from a dealer who will let you return it if it doesn't suit you.

a long long way by becoming
familiar with the thirds and sevenths of all the major and minor chords.
Also think of yourself as a horn section. Play as little as necessary to
get the harmonic structure across.

I assume you're familiar with the circle of fifths. It is the framework upon
which songs are constructed. Some classical players I've run into who didn't
have theory play for years and years without really grasping this.

There's a great trick (which works on guitar as well as keys) where, as you
go down the circle of fifths, the third and flatted seventh of a chord can
both go down a half step (or a fret) to become the flatted seventh and third
of the next chord.

If you're not already, become familiar with the I, IV, V, iv, etc. method
of chord representations. Transcribe progressions into this form, and then
you can easily move them to other keys.

Practicing ii V I progressions in all keys is good- even mandatory. Try all manner of ii chords (minor, minor 6, minor 7) in all inversions and see if you can find your way chromatically from each ii to the V chord. All kinds of cool things to be discovered.

Keep us posted how you're coming. Some of us have been working on this for decades...

I remember vividly watching a good player, late 70s, back when I had no clue. (I was playing bass and reading off his chart.) As the band was playing, he would scan the chart and just sit at the keyboard, waiting for the moment when a chord was needed. Then, bam! It was like magic. He knew just what to play and when.

-steveOr, simply ignore everything that's been posted in this thread, grab a fretless bass, and wail away with complete disregard as to whether you're playing a scalar note or not, and just maintain that you prefer to "play on the outside".

:)

dictate what the
better sounding unit.

The Prosonus is cool, but does have enough gain for me. Plus, the Big Knob
as more "routing" options..

Anybody know if it's any good? I'm doing some googling... but getting opinions that actually stand true when it comes to the quality of compressed audio can be difficult.

Cheers,

Kim.This is a multi-part message in MIME format.

Oh, I forgot to tell you. After all of this practicing, perspiration and = starvation since you won't be able to work since you're practicing so = much; once you learn how to play jazz, try finding a gig that pays more = than \$50.00, all 2 of them a month. While you're playing expect the = usual loudmouthed moron, yelling over your solo, who could give a crap = about all the hip shit you're playing. Then be prepared to turn down or = play more traditional, if you're playing too loud or too hip. And don't = forget that you'll need a day gig to pay for your coke and alcohol = addictions, since you've become so neurotic, myopic and reclusive after = about 10 years of constant 6-8 hr/day shedding. If you had a life before = you became a jazz musician, you can expect that you won't have one = after.

Kim, I'm really being facetious but this isn't too far from the truth. = Don't get me wrong, I love jazz. I spent most of my youth and young = adulthood perfecting my craft, completely engrossed in and devoted to = learning how to improvise, solo over changes and write. I still pursue = my 1st love, jazz, with a passion, but I have a day gig so I can pay for = my musical habit. If you do it, do it for the love of it and because it = really means something to you. There's really something special about = jazz for me. Unfortunately the listening public has little or no = understanding, or appreciation of the music form.

Hal Galper says it better than me: "One of my long-time associates in = the business once said that the inscription on his tombstone would read = "It wasn't worth it." As positive a kind of guy as I naturally am, I'm = beginning to sympathize with him."

Read the whole thing here: http://www.richlamanna.com/hal_galper.htm

You know how to make a million dollars playing jazz?
Start with 2 million.

Rich

"Rich Lamanna" <richard.lamanna@verizon.net> wrote in message =
news:444901e4@linux...

Kim, the only way I learned how to play jazz was by listening to the =
cats that I really dug and transcribed tons of solos. I practiced as =
many arpeggios as I could find or create with my own musical sense, in =
every key of course, this is a must, learned all the chord scales, in =
triads, sevenths,

Hi there,
Does heave any one the EDE software from Giebler for Win XP please.
Its for Ensoniq ASR-10 Sampler.
Thanks!!!Deej, I just ordered a rainy day PCI dual head you might be interested in.

128MB DDR GeForce FX5200 Dual Monitor PCI Vid Card -1+ \$42.00
from
<http://www.txmicro.com>

I don't know *anythiing* about these guys, but you could get another AGP
dually and have the 4 monitor deal happening relatively easy and cheap this
way. Just pick up another cheapo GeForce card and use the unified drivers if
the Win Natives aren't there.

It's made by Color graphic and has a ATI graphics chip so I don't expect it to work well and has proprietary cabling so make sure it has the cables included. But at this point its no worse than what you have now.

YOu will have it dumb down to the slowest device. You will not be able
to use any of the customer mixer applets for the various manufacturers.
It is basically like using that ASIO4All driver. Thank God RME doesn't
use one of the generic firewire audio chips so they won't have to deal
with all nightmare support the other folks will.

(859) 635-5762 Does anyone know of a good source to find an inexpensive laptop. It isn't
for recording, but I'm hoping someone has researched this already and I can
benefit from the experience.

Thanks

Barry

Also, I've noticed a trend towards Seagate (for desktop computer) hard drives lately. Is there any reason other than price and warranty or have people found them to be more reliable. Here is a nice Chainer and any compressor with 0 latency vst or DX (most

are 0 latency) to achieve multiband with up to 10 bands !! per track !!

Open chainer on you audio track.

Now chainer has 10 pages.

Open on as many pages as you want, say a 3 band splitter so you use 3 chainer pages.

On each of the three first chainer pages you put input on first slot.

On second slot you put a frequency splitter plugin like MDA splitter (free), or Tiny splitter (free) or whatever free ones you can find.

I use MDA splitter which sounds pristine.

So on first page you use mda splitter with a frequency of say 256 hz for bass and use the BELOW in your mda plugin.

Now on page 2 use again mda splitter and put ABOVE and frequency the same 256hz.

Then again underneath put one instance more of mda splitter with BELOW and frequency say 4500 hz, thus you have a band-pass there.

On page 3 you put again mda splitter and use a ABOVE and frequency of 4500.

Now you have divided your audio track in three band spaces.

Remember you can have ten !!

Now on each page underneath the mda you put your favourite compressor VST (0 latency) and so on page two and three.

Got the picture.

Pretty easy and the results are wonderful.

HINT:

If you wanna use Rencomp from Waves which introduces 64 samples latency you can have 3-4 instances of rencomp the same way as described above with a fixed 64 samples latency !

Even if you put ten instances of rencomp on same audiotrack you are still 64 samples behind !

Now just use nudge delay method for that 64 samples...

Regards,

Dimitriosyeah. I have gotten away from nudging pre recorded tracks and just to it the old way of flipping, (I think it messes with "space") however, I too do not want to mess up the sound of the natural phase relationship with latency.

On this subject, is anyone nudging bass tracks (DI, amp) part of me says it can make things too phat, and they couldn't do it back then (ok Dleay a signal) but part of me says, if they could have, they would have.
